

Action

MEMORANDUM

February 8, 2013

TO: County Council

FROM: Amanda Mihill, Legislative Attorney *A. Mihill*

SUBJECT: **Action:** Bill 33-12, Health and Sanitation – Smoking – County Property

Health and Human Services Committee recommendation (3-0): enact Bill 33-12 with the following amendments:

- prohibit smoking at bus stops and bus shelters;
- allow the Director of Health and Human Services to designate outdoor smoking areas on certain County properties;
- do not prohibit smoking on golf courses;
- prohibit smoking at County-owned residences, but grandfather existing tenants.

Bill 33-12, Health and Sanitation – Smoking – County Property, sponsored by Councilmembers Floreen, Navarro, Rice, Riemer, Leventhal, Elrich, and Andrews, was introduced on November 27, 2012. A public hearing was held on January 22 (see testimony ©69-74).

Background

What would the Proposed Regulation do? As introduced, Bill 33-12 would prohibit smoking on property owned or leased by the County (see ©27-42 for a list of County-owned property and ©43-48 for a list of County-leased property). The ban would exclude County rights-of-way. Materials from the chief sponsor, Councilmember Floreen begin on ©7.

What Health Concerns are Associated with Secondhand Smoke? The United States Surgeon General first raised the topic of involuntary smoking in a 1972 Surgeon General’s report entitled “The Health Consequences of Smoking”. In 1986, the Surgeon General devoted an entire report on the health issues regarding involuntary smoking. The most recent version of this report, “The Health Consequences of Involuntary Exposure to Tobacco Smoke,” was issued in 2006 and is available from Council staff or at the following website: <http://www.surgeongeneral.gov/library/secondhandsmoke/>. According to the Surgeon General, exposure to secondhand smoke can cause a variety of health ailments, including heart disease,

lung cancer, respiratory diseases such as asthma and pneumonia, and sudden infant death syndrome. A pamphlet describing the health risks of secondhand smoke is on ©58-68. The Surgeon General has stated that there is no risk-free level of exposure to secondhand smoke.

Issues/Committee Discussion

How would Bill 33-12 be enforced? County Executive Leggett conceptually supports the bill, but questions what the expectation is regarding how Bill 33-12 will be enforced. The enforcement procedures in §24-9, where this bill would be codified, state:

- (1) Any violation of this Section is a class C civil violation. Each day a violation exists is a separate offense.
- (2) The County Attorney or any affected party may file an action in a court with jurisdiction to enjoin repeated violations of the Section.
- (3) The Director of the Department of Health and Human Services may suspend a license issued under Chapter 15 for up to 3 days if the Director finds, under the procedures of Section 15-16, that the operator of an eating and drinking establishment has knowingly and repeatedly violated any provision of this Section.

Councilmembers should understand that there are some properties in which another entity may enforce the ban (e.g., some park property that may be County-owned, but managed by the Parks Department (©49-57)).

Should smoking be prohibited at bus shelters or bus stops? Several constituents requested the Council expand the proposed ban to include bus stops and bus shelters. County Executive Leggett supports extending the ban to include bus stops and bus shelters. There are other jurisdictions across the country that prohibit smoking in these areas. For example:

- Fairfax County prohibits smoking in any bus shelter owned by the County.
- San Antonio, Texas prohibits “smoking in, and within 20 feet of outdoor public transportation stations, platforms, and shelters” under the city’s authority.
- Berkeley, California prohibits smoking “within 25 feet of any bus stop”. Bus stop is not defined.
- A Durham County Board of Health Rule prohibits smoking in/on City and County bus stops. Bus stop is defined as “a designated area, whether enclosed or unenclosed, where buses stop for passengers to board or exit a bus.” Bus stop includes “areas at bus stops and bus shelters, beginning at the bus stop sign or at either edge of the bus shelter and extending the length of the bus.”

Committee recommendation (3-0): prohibit smoking at bus stops and bus shelters (©4, lines 55-57).

Should smoking be prohibited at golf courses? The Council received several letters from constituents urging the Council not to prohibit smoking at golf courses. At the public hearing, John O’Hara, speaking on behalf of MD group Against Smokers Pollution, indicated that they would include golf courses in the proposed ban. According to the information provided by the Department of General Services, the County owns one golf course that is operated by the

Revenue Authority: Falls Road Golf Course. Unless exempted, this property would be subject to the ban. Committee members may wish to discuss whether there should be an exemption for golf courses.

Committee recommendation (2-1, Councilmember Leventhal opposed): do not prohibit smoking at golf courses (©4, line 75).

Should there be exceptions for certain HHS facilities? Executive staff have raised concerns with the impact Bill 33-12 may have on County-owned and -leased facilities that house programs used to treat people with addictions. Executive staff are concerned that prohibiting smoking in these types of facilities would negatively impact the treatment of people who are stepping down from hard drugs. Executive staff recommend amending Bill 33-12 to allow the Director to designate an area outside where smoking would be permitted if the Director finds that the prohibition would impede the treatment of these individuals.

Committee recommendation (2-1, Councilmember Leventhal dissenting): Provide the HHS Director with discretion to allow smoking on County property if a complete prohibition would impede the delivery of services (©4-5, lines 76-82). Councilmember Leventhal requested the Director to provide him with information that discusses the use of smoking related to the treatment of substance abuse.

How would Bill 33-12 impact private residences? The County owns – and leases – some buildings that include private residences.

Committee recommendation (3-0): Grandfather existing tenants, but prohibit smoking in County-owned and County-leased residences that become vacant after the effective date of Bill 33-12 (©4, lines 72-74).

New issue: After the Committee worksession, the Council received a letter from James Brown, President of Victory Housing. Mr. Brown indicated that his company is constructing a senior housing community on land leased from the County. Although the units themselves would be smoke-free, Mr. Brown is requesting an amendment to allow smoking on the property outside the residential buildings (©74).

New issue: *What signs should be required to indicate where smoking is prohibited?* §24-9 requires that signs “prohibiting or permitting smoking, as the case may be, must be posted conspicuously at each entrance to a public place covered by this Section.” As the information provided on ©27 shows, there are many places in which it would not be advisable to post a sign, such as stormwater management ponds and other similar properties. Council staff will have language available at the Council worksession to address this concern.

Councilmember Floreen Will Introduce Bill to Ban Smoking on Montgomery Property

*On Thursday, Nov. 15, in Rockville, She Will Host Event
With American Cancer Society to Mark 37th Great American
Smokeout and Offer Details on the Legislation*

ROCKVILLE, Md., November 13, 2012—Montgomery County Councilmember Nancy Floreen at 11:30 a.m. on Thursday, Nov. 15, will hold a news conference in Rockville to give details on a bill she will introduce that would ban smoking on property owned or leased by Montgomery County. The ban would include all County properties except public rights of way.

The bill, which is scheduled for introduction on Nov 27, is co-sponsored by Council Vice President Nancy Navarro and Councilmembers Craig Rice, Hans Riemer, George Leventhal and Marc Elrich. A public hearing on the bill is tentatively scheduled for Jan. 15.

The news event will be held in the Third Floor Hearing Room of the Council Office Building, which is located at 100 Maryland Ave. in Rockville. Representatives of the American Cancer Society will be present as the event coincides with the organization's 37th Great American Smokeout. The Smokeout is an annual event that urges smokers to give up their smoking habits.

"I have unfortunately spent a lot of time over the past year with people who have cancer," said Councilmember Floreen, a survivor of breast cancer. "I want to do everything I can to help prevent this awful disease in all of its forms, and this is a good place to start."

In Montgomery County, one in 12 adults smoke cigarettes. Nationally, tobacco use is responsible for one in five deaths, and an annual toll of 443,000 deaths. Smoking accounts for at least 30 percent of all cancer deaths and is associated with increased risk for 15 types of cancer. Tobacco use remains the single, largest preventable cause of disease and premature death in the U.S.

“The Great American Smokeout is about helping people quit, and we know that passing this bill is critical to helping people in Montgomery County do just that,” said Bonita Pennino, Government Relations Director for the American Cancer Society’s Cancer Action Network. “In addition we know that strong smoke-free laws mean fewer smokers and reduced health care costs.”

Montgomery County - Current Cigarette Smoking

(Underage Middle & High School Youth, by Grade)

Evolution of Montgomery County smoking laws

- 1977 Prohibited smoking in elevators, retail stores where more than 8 persons work at any time, public areas of health care facilities, public schools, County government facilities, and theaters. Exceptions: private enclosed offices, when facilities are closed to the public, central areas of malls, barbershops, and beauty shops (Bill 26-76, effective 5-5-77)
- 1979 Required patient rooms in hospitals to be nonsmoking unless otherwise requested by all occupants. (Bill 53-79, effective 3-12-80)
- 1981 Required employers to "consider the needs of nonsmoking employees and ... accommodate their need to the extent possible." (Bill 53-81, effective 11-15-82)
- 1986 Prohibited smoking in rail transit stations and most County government workplaces. Exceptions to the workplace prohibition: designated smoking areas, private enclosed offices. (Bill 27-85, effective 4-28-86)
- 1987 Required all restaurants with at least 50 seats to have a no-smoking area covering at least 50% of the total seating area (Bill 1-87, effective 7-10-87)
- 1988 Prohibited smoking in public areas of offices, retail stores, banks, factories, and other private businesses. Exceptions: mom & pop stores (where no more than 2 persons work at any time), private functions not open to the public. Also prohibited smoking in public restrooms and auditoriums. (Bill 27-87, effective 6-9-88)
- 1990 Prohibited smoking in shared workplaces, and required employers to post notices and inform employees. Exceptions: mom & pop businesses, other businesses when all employees sharing the workplace consent. (Bill 51-89, effective 5-24-90)
- 1992 Prohibited sale of tobacco products from vending machines, except in private clubs. (Bill 5-91, 64-91, effective 5-1-92) County law declared invalid by Circuit Court 4-19-93; Court of Appeals declared similar laws from cities of Bowie and Takoma Park preempted by state law later in 1993.
- 1994 Prohibited smoking in **all** County government workplaces, with no designated smoking areas. (Bill 42-93, effective 5-2-94)
- 1998 Prohibited a person in the business of selling or distributing tobacco products for commercial purposes to distribute any tobacco product,

cigarette rolling paper, or tobacco product coupons to a minor (Bill 13-98; also adopted as Board of Health regulation(Council Resolution 13-1410))

- 1999 Conformed County law to state workplace smoking regulations by dropping references to workplaces in County law, thus focusing County law on public places (Bill 3-99, effective 6-29-99)
- 1999 Prohibited smoking in all restaurants (Council Resolution 14-70, adopting Board of Health regulation). Regulation declared invalid because of improper adoption by Maryland Court of Appeals 5-2-03
- 2000 Required retail sellers to display or store tobacco products in a place that is not accessible to buyers without the intervention of the seller (Bill 23-00, effective February 19, 2001)
- 2003 Prohibited smoking in all restaurants except certain private clubs with liquor licenses (Bill 15-03, effective October 9, 2003)
- 2011 Prohibited smoking in indoor common areas of multi-family residential units and playgrounds (Council Resolution 17-210, adopting Board of Health regulation, effective August 12, 2011)

Tobacco Use – Fact Sheet
American Cancer Society Great American Smokeout® 2012

- Tobacco use remains the single largest preventable cause of disease and premature death in the United States.ⁱ
- For every person who dies from a smoking-related disease, 20 more people suffer with at least one serious illness from smoking.ⁱⁱ
- In the US, tobacco use is responsible for nearly 1 in 5 deaths, or about 443,000 premature deaths each year.ⁱ
- On average, smokers die 13 to 14 years earlier than nonsmokers.ⁱⁱⁱ
- The risk of developing lung cancer is about 23 times higher in male smokers and 13 times higher in female smokers, compared to lifelong nonsmokers.ⁱ
- Tobacco use increases the risk of myeloid leukemia and cancers of the lung, mouth, nasal cavities, larynx, throat, esophagus, stomach, colorectum, liver, pancreas, kidney, bladder, uterine cervix, and ovaries.ⁱ
- Tobacco use accounts for at least 30% of all cancer deaths and 80% of lung cancer deaths.ⁱ
- Thousands of young people begin smoking every day.^{iv}
 - Each day, more than 3,800 people younger than 18 smoke their first cigarette.
 - Each day, about 1,000 people younger than 18 begin smoking on a daily basis.
- Cigars contain many of the same carcinogens that are found in cigarettes. Cigar smoking increases the risk of cancers of the lung, mouth, throat, larynx, esophagus, and probably the pancreas.ⁱ
- Sales of little cigars increased by 240% from 1993 to 2007.ⁱ
- Smokeless tobacco products are a major source of cancer-causing nitrosamines (chemical compounds) and a known cause of human cancer. They increase the risk of developing cancer of the mouth and throat, esophagus, and pancreas.ⁱ
- Sales of smokeless tobacco products are growing at a more rapid pace than cigarettes. While sales of cigarettes declined by 42% between 1990 and 2006, per capita sales of smokeless products in the US nearly doubled.ⁱ

Global Tobacco Use

- In 2011, tobacco use killed almost 6 million people, with 80% of these deaths occurring in low- and middle-income countries,ⁱ and current trends show that tobacco use will cause more than 8 million deaths annually by 2030.^v
- 43 trillion cigarettes have been smoked in the last decade.^{vi}

- Smoking rates are increasing among women, particularly young women, in many countries. Women and children account for 75% of the deaths caused by secondhand smoke.^{vi}

Costs and Expenditures

- Cigarette smoking costs the United States more than \$193 billion (i.e., \$97 billion in lost productivity plus \$96 billion in health care expenditures).^{vii}
- Secondhand smoke costs United States more than \$10 billion (i.e., health care expenditures, morbidity, and mortality).^{viii}
- The tobacco industry receives annual profits of almost \$6,000 per death caused by tobacco.^{vi}

Smoking Cessation

- People who quit, at any age, live longer than people who continue to smoke.ⁱ
- Smokers who quit before age 50 cut their risk of dying in the next 15 years in half, compared to those who continue to smoke.ⁱ
- Large disparities in smoking prevalence and cessation continue to exist. Smokers with an undergraduate or graduate degree are more likely to quit than those with less formal education.ⁱ
- Many adult smokers want to quit smoking.^{ix}
 - Approximately 69% of smokers want to quit completely.
 - Approximately 52% of smokers attempted to quit in 2010.

Secondhand Smoke

- Secondhand smoke contains more than 7,000 chemicals, at least 69 of which cause cancer.ⁱ
- Each year, about 3,400 nonsmoking adults die of lung cancer as a result of breathing secondhand smoke.ⁱ
- Secondhand smoke may cause coughing, wheezing, chest tightness, and reduced lung function in adult nonsmokers.ⁱ

Overview

Secondhand smoke is the combination of smoke from the burning end of a cigarette and the smoke breathed out by smokers. Secondhand smoke contains more than 7000 chemicals. Hundreds are toxic and about 70 can cause cancer.^{1,2}

There is no risk-free level of exposure to secondhand smoke. Secondhand smoke causes numerous health problems in infants and children, including severe asthma attacks, respiratory infections, ear infections, and sudden infant death syndrome (SIDS).¹ Some of the health conditions caused by secondhand smoke in adults include heart disease and lung cancer.¹

Secondhand Smoke Causes Heart Disease

Exposure to secondhand smoke has immediate adverse effects on the cardiovascular system and can cause coronary heart disease.^{1,3}

- Secondhand smoke causes an estimated 46,000 premature deaths from heart disease each year in the United States among nonsmokers.⁴
- Nonsmokers who are exposed to secondhand smoke at home or at work increase their risk of developing heart disease by 25–30%.¹

Breathing secondhand smoke can have immediate adverse effects on your blood and blood vessels, increasing the risk of having a heart attack.^{1,2}

- Breathing secondhand smoke interferes with the normal functioning of the heart, blood, and vascular systems in ways that increase the risk of having a heart attack.
- Even brief secondhand smoke exposure can damage the lining of blood vessels and cause your blood platelets to become stickier. These changes can cause a deadly heart attack.

People who already have heart disease are at especially high risk of suffering adverse effects from breathing secondhand smoke and should take special precautions to avoid even brief exposures.¹

Secondhand Smoke Causes Lung Cancer

Secondhand smoke causes lung cancer in adults who themselves have never smoked.¹

- Nonsmokers who are exposed to secondhand smoke at home or at work increase their risk of developing lung cancer by 20–30%.¹
- Secondhand smoke causes an estimated 3,400 lung cancer deaths among U.S. nonsmokers each year.^{4,5}

Nonsmokers who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers.^{1,2}

- Secondhand smoke contains about 70 cancer-causing chemicals.
- Even brief secondhand smoke exposure can damage cells in ways that set the cancer process in motion.
- As with active smoking, the longer the duration and the higher the level of exposure to secondhand smoke, the greater the risk of developing lung cancer.

Secondhand Smoke Causes SIDS

SIDS is the sudden, unexplained, unexpected death of an infant in the first year of life. SIDS is the leading cause of death in otherwise healthy infants.⁶ Secondhand smoke increases the risk for SIDS.¹

- Smoking by women during pregnancy increases the risk for SIDS.⁷
- Infants who are exposed to secondhand smoke after birth are also at greater risk for SIDS.¹
- Chemicals in secondhand smoke appear to affect the brain in ways that interfere with its regulation of infants' breathing.¹
- Infants who die from SIDS have higher concentrations of nicotine in their lungs and higher

levels of cotinine (a biological marker for secondhand smoke exposure) than infants who die from other causes.¹

Parents can help protect their babies from SIDS by taking the following three actions:⁸

- Do not smoke when pregnant.
- Do not smoke in the home or around the baby.
- Put the baby down to sleep on its back.

Secondhand Smoke and Children

Secondhand smoke can cause serious health problems in children.⁹

- Studies show that older children whose parents smoke get sick more often. Their lungs grow less than children who do not breathe secondhand smoke, and they get more bronchitis and pneumonia.
- Wheezing and coughing are more common in children who breathe secondhand smoke.
- Secondhand smoke can trigger an asthma attack in a child. Children with asthma who are around secondhand smoke have more severe and frequent asthma attacks. A severe asthma attack can put a child's life in danger.
- Children whose parents smoke around them get more ear infections. They also have fluid in their ears more often and have more operations to put in ear tubes for drainage.

Parents can help protect their children from secondhand smoke by taking the following actions:⁹

- Do not allow anyone to smoke near your child.
- Do not smoke or allow others to smoke in your home or car. Opening a window does not protect your children from smoke.
- Use a smoke-free day care center.
- Do not take your child to restaurants or other indoor public places that allow smoking.
- Teach children to stay away from secondhand smoke.

Fiscal Impact Statement
Council Bill 33-12, Health and Sanitation – Smoking-County

1. Legislative Summary.

This bill would prohibit smoking on property owned or leased by the County, excluding County rights-of-way, thus reducing employees' and visitors' exposure to second hand smoke.

2. An estimate of changes in County revenues and expenditures regardless of whether the revenues or expenditures are assumed in the recommended or approved budget. Includes source of information, assumptions, and methodologies used.

No increase in revenues due to the difficulty of enforcing immediate violations of the law. Expenditures are difficult to estimate due to the unknown number of complaints that might be received. Due to the large number of County properties affected by this legislation there could be initially a large number of complaints.

Both County Police and HHS have authority to investigate complaints and to issue citations for violations of Section 24-9 and 24-9A of the County Code. Under current regulation, violations by county employees are reported to immediate supervisors. Continued violations are reported to L&R, and then forwarded to appropriate Department director and CAO. It is unclear how violations by visitors to County facilities will be managed.

Licensure and Regulatory Services estimates three complaints per week for the first year of enforcement. Estimating one hour of investigation and enforcement labor for each complaint at \$50.00 per hour the first year expenditure for public health labor would be \$7,800. Employee training and education is estimated at \$3,450 (see item 6). Total expenditures are estimated to be approximately \$11,250 for the first year. There may be additional cost associated with public outreach and signage at all County leased and owned properties. However these expenditures would depend on later budget decisions.

3. Revenue and expenditure estimates covering at least the next 6 fiscal years.

As observed with other smoking regulations that have been passed, the first year of enforcement tends to be the most labor intensive. Subsequent years are difficult to anticipate but estimated to be ¼ of the initial year expenditure or \$1,950 per year.

4. An actuarial analysis through the entire amortization period for each bill that would affect retiree pension or group insurance costs.

N/A

5. Later actions that may affect future revenue and expenditures if the bill authorizes future spending.

N/A

6. An estimate of the staff time needed to implement the bill.

It is difficult to accurately estimate the staff training, education and development of inspection procedures. This office estimates 3 hours training and public outreach for each employee at \$50 per hour for 23 employees is \$3,450.

7. An explanation of how the addition of new staff responsibilities would affect other duties.

Investigation of complaints at County properties during normal work hours will reduce the number of other state mandated inspections that would be completed. Currently L&R is only able to complete approximately 75% of total mandated inspections. That percentage will drop further—perhaps by 1-2%—given increased enforcements duties assigned to L&R in recent legislation—e.g., defibrillators at community pools, smoking bans in multi-unit buildings and playgrounds. In addition staff may be required to flex time off during normal work hours to avoid overtime if after hours or weekend investigations are required, further reducing the ability to fulfill regular inspection duties.

8. An estimate of costs when an additional appropriation is needed.

N/A

9. A description of any variable that could affect revenue and cost estimates.

The number of complaints and the time required to investigate and enforce is highly unpredictable.

10. Ranges of revenue or expenditures that are uncertain or difficult to project.

Labor costs associated with implementation and enforcement is difficult to project.

11. If a bill is likely to have no fiscal impact, why that is the case.

N/A

12. Other fiscal impacts or comments.

N/A

13. The following contributed to and concurred with this analysis: (Enter name and department).

Clark Beil, Department of Health & Human Services (DHHS)

Pat Brennan, DHHS

Lisa Stafford, DHHS

Economic Impact Statement
Council Bill 33-12, Health and Sanitation – Smoking – County Property

Background:

Bill 33-12 prohibits smoking on or in property owned or leased by the County—it excepts County right of way from this prohibition.

1. The sources of information, assumptions, and methodologies used.

“The Economic Impact of Michigan’s Dr. Ron Davis Smoke Free Air Law: A Report to the Michigan Department of Community Health;” Helen Levy, PhD, Institute for Social Research at the University of Michigan, August 6, 2012.

Federal Reserve Bank of St. Louis Regional Economic Development, Vol. 2 Number 2, 2006: “On the Economic Analysis of Smoking Bans” by Michael R. Pakko (St. Louis Fed)

“Review of Economic Studies on Smoking Bans in Bars and Restaurants” Information Brief for the Minnesota House of Representatives, by the MHOR’s Research Department (March 2006)

2. A description of any variable that could affect economic impact statements.

See #3 below.

3. The bill’s positive or negative effect, if any on employment, spending, saving, investment, incomes, and property value in the County.

This bill has no measurable economic impact. The most recent study is from the Institute for Social Research at the University of Michigan which conducted a study of the two year old smoking ban enacted by the State of Michigan and found “no significant negative effect of the ban on aggregate bar and restaurant sales or on cigarette sales.” (The ban was on smoking in the workplace, not just at bars and restaurants). The study concludes that “the evidence is consistent with the results of studies from other state and localities that have found no significant negative economic effects associated with smoking bans.

4. If a bill is likely to have no economic impact, why is that the case?

See #3 above.

Economic Impact Statement
Council Bill 33-12, Health and Sanitation – Smoking – County Property

The Health Consequences of Involuntary Exposure to Tobacco Smoke

A Report of the Surgeon General

Secondhand Smoke

what it means to

you

Secondhand Smoke

It hurts you.

It doesn't take much.

It doesn't take long.

The 2006 Surgeon General's report has new information about how breathing secondhand smoke hurts your health. You can find more information about this report by going to the Surgeon General's website at www.surgeongeneral.gov.

More information is also available by going to the Centers for Disease Control and Prevention (CDC) website at www.cdc.gov/tobacco.

Secondhand smoke is dangerous.

The Surgeon General of the United States, working with a team of leading health experts, studied how breathing secondhand tobacco smoke affects you.

This booklet explains what scientists have learned about the dangers of secondhand smoke. It also tells you how to protect yourself and your family.

What is secondhand smoke?

When a person smokes near you, you breathe secondhand smoke. Secondhand smoke is the combination of smoke from the burning end of the cigarette and the smoke breathed out by smokers. When you breathe secondhand smoke, it is like you are smoking.

Whether you are young or old, healthy or sick, secondhand smoke is dangerous.

What we now know:

- There is no safe amount of secondhand smoke. Breathing even a little secondhand smoke can be dangerous.
- Breathing secondhand smoke is a known cause of sudden infant death syndrome (SIDS). Children are also more likely to have lung problems, ear infections, and severe asthma from being around smoke.
- Secondhand smoke causes heart disease and lung cancer.
- Separate "no smoking" sections DO NOT protect you from secondhand smoke. Neither does filtering the air or opening a window.
- Many states and communities have passed laws making workplaces, public places, restaurants, and bars smoke-free. But millions of children and adults still breathe secondhand smoke in their homes, cars, workplaces, and in public places.

No amount of secondhand smoke is safe.

When you are around a person who is smoking, you inhale the same dangerous chemicals as he or she does. Breathing secondhand smoke can make you sick. Some of the diseases that secondhand smoke causes can kill you.

Protect yourself: do not breathe secondhand smoke. But completely avoiding secondhand smoke is very hard to do. Most of us breathe it whether we know it or not. You can breathe secondhand smoke in restaurants, around the doorways of buildings, and at work. When someone smokes inside a home, everyone inside breathes secondhand smoke. Some children even breathe smoke in day care.

There is no safe amount of secondhand smoke. Children, pregnant women, older people, and people with heart or breathing problems should be especially careful. Even being around secondhand smoke for a short time can hurt your health. Some effects are temporary. But others are permanent.

WHAT CAN YOU DO?

Make your environment smoke-free.

- *Make your home and car smoke-free.*
- *Visit smoke-free restaurants and public places.*
- *Ask people not to smoke around you and your children.*

Secondhand smoke contains poisons.

The chemicals found in secondhand smoke hurt your health and many are known to cause cancer. You breathe in thousands of chemicals when you are around someone who is smoking.

WHAT THE SCIENCE SAYS

How do scientists measure exposure to secondhand smoke?

Researchers measure:

- how many people are smoking
- how many cigarettes they smoke
- time spent in the room
- levels of nicotine in the air
- level of nicotine by-product in the body

Secondhand Smoke is toxic

Cancer Causing Chemicals

All are extremely toxic

Secondhand smoke has more than 4,000 chemicals.

Many of these chemicals are toxic and cause cancer.

You breathe in these chemicals when you are around someone who is smoking.

Poison Gases

Can cause death
Can affect heart and respiratory functions
Can burn your throat, lungs, and eyes
Can cause unconsciousness

Alkaloids
Can cause cancer
Can cause death
Can damage the brain and kidneys

Secondhand Smoke

causes death and sickness in children.

▶ Breathing secondhand smoke is a known cause of sudden infant death syndrome (SIDS).

▶ Children are also more likely to have lung problems, ear infections, and severe asthma.

Babies are hurt by secondhand smoke.

Tobacco smoke harms babies before and after they are born. Unborn babies are hurt when their mothers smoke or if others smoke around their mothers. Babies also may breathe secondhand smoke after they are born. Because their bodies are developing, poisons in smoke hurt babies even more than adults. Babies under a year old are in the most danger.

Secondhand smoke is a known cause of sudden infant death syndrome (SIDS).

The sudden, unexplained, unexpected death of an infant before age 1 year is known as SIDS. The exact way these deaths happen is still not known. We suspect it may be caused by changes in the brain or lungs that affect how a baby breathes. During pregnancy, many of the compounds in secondhand smoke change the way a baby's brain develops. Mothers who smoke while pregnant are more likely to have their babies die of SIDS.

Babies who are around secondhand smoke—from their mother, their father, or anyone else—after they are born, are also more likely to die of SIDS than children who are not around secondhand smoke.

Secondhand smoke causes low birth weight and lung problems in infants.

Babies whose mothers are around secondhand smoke are more likely to have lower birth weights. These babies can have more health problems because they breathe smoke. For example, they are more likely to have infections than babies who are not around secondhand smoke.

Studies show that babies whose mothers smoke while pregnant are more likely to have lungs that do not develop in a normal way. Babies who breathe secondhand smoke after birth also have weaker lungs. These problems can continue as they grow older and even when they become adults.

WHAT THE SCIENCE SAYS

The main place young children breathe secondhand smoke is in their homes. Almost 3 million children in the United States under the age of 6 years old breathe secondhand smoke at home at least 4 days per week.

Older children are in danger, too.

Studies show that older children whose parents smoke get sick more often. Like babies, their lungs grow less than children who do not breathe secondhand smoke. They get more bronchitis and pneumonia. Wheezing and coughing are also more common in children who breathe secondhand smoke.

Secondhand smoke can trigger an asthma attack in a child. Children with asthma who are around secondhand smoke have worse asthma attacks and have attacks more often. More than 40 percent of children who go to the emergency room for asthma live with smokers. A severe asthma attack can put a child's life in danger.

Ear infections are painful. Children whose parents smoke around them get more ear infections. They also have fluid in their ears more often and have more operations to put in ear tubes for drainage.

WHAT CAN PARENTS DO?

Protect your children's health.

- Do not allow anyone to smoke near your child.
- Do not smoke or allow others to smoke in your home or car. Opening a window does not protect your children from smoke.
- Use a smoke-free day care center.
- Do not take your child to restaurants or other indoor public places that allow smoking.
- Teach older kids to stay away from secondhand smoke.

Secondhand Smoke

causes heart disease and lung cancer in adults.

- ▶ Breathing secondhand smoke for even a short time can have immediate bad effects.
- ▶ Over time, secondhand smoke can cause heart disease and lung cancer.

Secondhand smoke hurts adults too.

The longer you are around secondhand smoke, the more likely it is to hurt you.

Nonsmokers who breathe smoke at home or at work are more likely to become sick and die from heart disease and lung cancer. Studies show that secondhand smoke may cause other serious diseases, too.

Secondhand smoke is bad for your heart.

Breathing secondhand smoke makes the platelets in your blood behave like those of a regular smoker. Even a short time in a smoky room causes your blood platelets to stick together. Secondhand smoke also damages the lining of your blood vessels. In your heart, these bad changes can cause a deadly heart attack.

Secondhand smoke changes how your heart, blood, and blood vessels work in many ways. Adults who breathe 5 hours of secondhand smoke daily have higher "bad" cholesterol that clogs arteries.

WHAT CAN YOU DO?

Protect your health.

More restaurants and bars are smoke-free than ever. New York City restaurants and bars increased business by 9 percent after becoming smoke-free.

- Choose restaurants and bars that are smoke-free. Thank them for being smoke-free.
- Let owners of businesses that are not smoke-free know that smoke bothers you. Tell them a "no smoking" section is not good enough.

People who have heart disease should be very careful not to go where they will be around secondhand smoke.

The bottom line is that breathing secondhand smoke makes it more likely that you will get heart disease, have a heart attack, and die early.

Even a short time in a smoky room can get your blood platelets to stick together. Secondhand smoke also damages the lining of your blood vessels. In your heart, these bad changes can cause a deadly heart attack.

Secondhand smoke hurts your lungs.

Secondhand smoke includes many chemicals that are dangerous for your lungs. Secondhand smoke is especially dangerous for young children and adults with heart and lung disease.

Secondhand smoke causes lung cancer.

Secondhand tobacco smoke contains the same cancer-causing chemicals that smokers inhale.

Secondhand smoke causes lung cancer in adults who don't smoke. Breathing in secondhand smoke at home or work increases your chances of getting lung cancer by 20 percent to 30 percent.

WHAT CAN HEALTH CARE EXPERTS DO?

- Ask patients if they smoke and if they are around secondhand smoke.
- Advise patients who smoke to stop, and help them quit.
- Advise patients who smoke not to smoke around others.
- Advise nonsmokers to protect themselves by avoiding all secondhand smoke.
- Remind parents to protect their children from secondhand smoke.
- Discuss the added dangers of secondhand smoke for adults who have heart disease or asthma.
- Offer special warnings to parents when treating children with respiratory infections, asthma, or ear disease.

WHAT CAN EMPLOYERS DO?

Protect your workers.

Secondhand smoke is harmful for all workers. Restaurant and bar workers breathe more secondhand smoke than other workers and have higher rates of lung cancer.

- Make sure your employees do not breathe secondhand smoke at work.
- Make all indoor places smoke-free.
- Don't allow smoking near doorways and entrances.
- Offer programs to help employees quit smoking.

Secondhand smoke causes other breathing problems.

Secondhand smoke affects how well your lungs work, especially if you already have asthma or other breathing problems. Being around smoke makes you more congested and cough more.

Secondhand smoke also irritates your skin, eyes, nose, and throat. If you have allergies or a history of breathing problems, secondhand smoke can make you even sicker.

You should especially speak to your doctor or healthcare provider about the dangers of secondhand smoke if:

- You have breathing or heart problems
- You are pregnant
- You are concerned about your children's health

Secondhand smoke may cause disease in other parts of your body.

We know that smoking causes many forms of cancer. Scientists believe even a little tobacco smoke is dangerous. Scientists also believe secondhand smoke may cause other diseases throughout your body. They are doing studies on possible links to stroke, breast cancer, nasal sinus cancer, and chronic lung problems in children and adults.

Secondhand smoke may cause disease in other parts of your body.

There's no such thing as a

section

No amount of secondhand smoke is safe.

Here are some unexpected ways you may breathe secondhand smoke every day:

Sitting in the "no smoking" section, even if it doesn't smell smoky

Riding in a car while someone else is smoking, even if a window is open

Being in a house where people are smoking, even if you're in another room

Working in any restaurant, warehouse, or building that allows smoking inside, even if there is a filter or ventilation system

Acknowledgments

This public document was prepared by the U.S. Department of Health and Human Services under the direction of the Office of the Surgeon General to make information in *The Health Consequences of Involuntary Exposure to Tobacco Smoke: A Report of the Surgeon General* available to everyone.

About the Surgeon General's Report

The Surgeon General is the nation's highest-ranking health officer. The President appoints the Surgeon General to help promote and protect the health of all Americans.

The Surgeon General gives Americans the best scientific information available on how to improve their health and reduce their risk of illness and injury.

The Health Consequences of Involuntary Exposure to Tobacco Smoke: A Report of the Surgeon General was prepared by many of the country's leading scientists and public health experts. The full report is more than 600 pages long. It took more than 4 years to complete. It is written for a scientific audience. However, Surgeon General Richard H. Carmona believes the findings are very important to everyone.

Suggested Citation: U.S. Department of Health and Human Services. *The Health Consequences of Involuntary Exposure to Tobacco Smoke: A Report of the Surgeon General. Secondhand Smoke What It Means to You.* U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, Coordinating Center for Health Promotion, National Center for Chronic Disease Prevention and Health Promotion, Office on Smoking and Health, 2006.

Secondhand Smoke

It hurts you.

It doesn't take much.

It doesn't take long.

For more information

For more information on secondhand smoke, talk to your doctor, nurse, pharmacist, or other healthcare professional.

I am here today as the President of the Maryland group Against Smoker's Pollution (MDGASP) to urge you to support and vote for passage of Bill 33-12, Health and Sanitation – Smoking – County Property. The MDGASP has many members from Montgomery County.

This bill would prohibit smoking on property owned or leased by the County. Such a law would not only protect innocent non-smokers from this Class "A" carcinogen but would also serve as a deterrent to many of our youngsters from starting to smoke. It will also reduce the risk of fires and reduce the pollution from discarded cigarette and cigar butts.

It should be noted that many jurisdictions throughout the country have implemented such laws. For example, the City of Bowie, MD has enacted a similar law banning smoking on all City owned and leased properties, including its Parks. Violators can be fined \$50. It has been in effect for about 1&1/2 years with little or no enforcement problems.

Why do Montgomery County residents need this protection? Here is one example

Tobacco smoke contains radioactive Polonium-210 (PO-210) and Lead-210 (PB-210). The radioactive half life for PO-210 is 138 days and for PB-210 is 22 years. These substances can get sequestered in your lungs, lymph nodes and other body parts and remain there while they are decomposing. As these substances decay they emit Alpha particles which can alter the DNA structure of cells and cause cancer. Many researchers and medical people believe this may be the major cause of cancer in both smokers and people exposed to second hand smoke.

* The National Academy of Sciences has stated that "There are no known safe levels of ionization radiation for humans".

It is astounding to me that authorities go to great lengths to protect us from sources of radiation like Radon, X-rays etc., but they do not do enough to protect us from breathing this stuff directly into our lungs in the form of tobacco smoke.

Several of our MDGASP members from Montgomery County must use public transportation and are adversely affected by people smoking in the bus shelters. On their behalf, I request that you add a clause prohibiting smoking in bus shelters to this legislation.

Please continue your reputation as being a progressive County for protecting your citizens by passing this amended legislation.

Re: Bill 33-12: Limits on Smoking on County Owned or Leased Property

It is very appropriate and timely that the county expand its smoking bans. People need persistent reminders that exposure to smoking, including second-hand smoke is still a very serious problem. After a decrease, there is again an uptick in smoking among youth, and in particular minority youth.

This I see in Silver Spring and Wheaton where I work. Young people smoke in the Wheaton subway station tunnel, they smoke in great numbers on the private Ellsworth Street, they bring still smoldering cigarettes onto Ride On buses. I saw one minority youth, with a baby in a chest baby carrier, smoking a cigarette, on the grounds of Wheaton station. According to the county's own numbers and my own anecdotal experience, smoking is increasing at a faster rate among minority youth than the average for all, and becomes an unfortunate example for immigrants from Africa and Latin America.

There is an unfortunate class divide. Bethesda and environs see the smoking issue solved. There was only one smoker at last year's Glen Echo Folk Festival. In contrast, at a crowded Silver Spring festival, there was a good deal of smoking. Education and advertising is less effective and more expensive than the expansion of a ban on tobacco use to many more public places.

The new Silver Spring Transit Center must be off limits to all smoking. This enclosed structure will be a busy place for people of all ages and health conditions. Aside from the health issues, cigarette butts and ash and litter are unsightly and diminish the appearance of this impressive structure. It is much easier to make a change at a beginning, at a fresh start, so smokers won't rely on the status quo of smoking wherever they please.

Our county Human Resources Department needs to join the effort of a smoke-free county workplace. New employees hear nary a word on the smoking restrictions around county buildings. Supervisors continue to speak with employees under them, while smoking, thinking it's okay because it is out-of-doors.

I have worked for the county for over 10 years. For many decades of my life I had safe, low blood pressure readings. Last year, for the first time, my blood pressure reading is high and I need to take medication for it. I attribute that partly to having to be around smokers on county property. The county needs to set a good example and include more areas under a smoking ban.

Thank you for your consideration.

Council Members:

I am here today not to talk about the effects of smoking and whether or not nicotine is an addictive substance. I believe that the tobacco industry and health advocates have made this quite clear the adverse health effects from cigarettes.

Today I am here to tell you about a family business right in Montgomery County that I am president of, Century Distributors. What make us unique, we are the only wholesaler of our kind in Montgomery County, with the three owners living and educated in the County. Currently we have 180 employees, a fleet of 45 vehicles, and work out of 100,000 square feet of warehouse space. Most of our employees reside in Montgomery County. Century is a full service distributor serving the Baltimore/Washington metro area and Northern Virginia. Our 2000 plus customers include convenience stores, gas stations, schools and more. Century goal is to service our customers in the most responsible, effective and profitable manner delivering tobacco and convenience products.

Century's product mix is 82% Tobacco and 18% other consumer goods to retail. That is correct; our revenue is dependent on tobacco. Without the tobacco revenue, I am certain Century would struggle to maintain our current level of viability as a business in Montgomery County.

In addition to the revenue Century derives from tobacco, we are the collecting agent for a significant portion of tax revenue for the State. Century is responsible for affixing the Maryland Tax stamp on each pack of cigarettes, currently at a price of \$2.00 per stamp. In 2012, Century stamped a total of 19,920,000 cigarette packs just for the state of Maryland representing almost \$40 million in revenue which trickles right down to Montgomery County and its residents. That number only represents what Century was responsible for in 2012, not other wholesalers who provide cigarettes into Maryland.

Why, at this time, do we need another bill to limit where consumers can smoke? Why is this even a discussion? I believe that most adult smokers are aware of where they can, and cannot, smoke. When is the last time someone was in a

public restroom in Montgomery County where someone was smoking? I can't recall one incident myself.

In the U.S., the percentage of heavy smokers has dropped significantly since the late 1970's and has reached an all time low in 2012. The numbers are reducing themselves without a legislative bill or further restrictions of where one can smoke.

Century would like to remain an important part of the Montgomery County business community, but with more and more bills preventing the residents of Montgomery County from making their own decisions affects our future ability to remain in the County. This is more than just a health issue, but a business question for County. Let small businesses in this county, including all the suppliers, convenience stores and small mom and pop stores who sell cigarettes and provide tax revenue to this County remain viable.

Hello Councilmember Floreen,

I write with respect to Bill 33-12 concerning smoking on County property. Victory Housing has twenty-eight affordable housing communities, and smoking is not allowed in any of them. We do, however, allow smoking outside on our community property, as far away from our buildings as possible. For example, at our new Victory Court senior housing community, which is under construction on land leased from the County, our intent was to allow smoking in a gazebo in our courtyard. That seems to us to strike a fair balance between the rights of smokers and non-smokers.

We respectfully request that you give consideration to such a policy in your deliberations, and we thank you in advance for your attention to this matter.

Best regards,

Jim
