

University Towers Community Walk – January 20, 2012

Join your neighbors in learning about projects proposed to improve environmental conditions on the University Towers property and in adjacent streams.

Montgomery County Department of Environmental Protection (DEP) is proposing to install new small scale stormwater management facilities to capture and filter stormwater runoff from parking lots at University Towers similar to the illustration shown on the right. The cost of installing and maintaining these facilities will be paid for by DEP as part of the County's ongoing commitment to improving environmental conditions throughout the county. Additionally these facilities are part of a comprehensive plan to improve degraded conditions in the small stream across University Blvd. that flows into Sligo Creek.
