Changes in Super User and MAC VPN functionality

10-1-2014

Effective immediately, split tunneling enforcement has been discontinued. Instead of users being blocked from the open Internet while connected as a Super User with Network Connect and/or a MAC platform, ALL traffic will flow through the VPN tunnel. This means that you can access Office365 while connected to the VPN and also the open Internet. This also means that ALL Internet traffic will be subject to the county Internet Use policy while connected to the VPN as a Super User with Network Connect and/or a MAC platform.
