

I support reinstating the county's COVID restrictions until such time as the CDC feels it is safe to start re-opening more. I also fully support opening a mass vaccination site in Montgomery County immediately and hope that the state and county will soon start vaccinating people under 65 who have serious health issues as other states and locales across the country are already doing, there is no excuse for not prioritizing this population. I find it truly disheartening that my children who live in other states can get vaccinated and as an almost 65 year old with health problems, I cannot in Maryland, this is not good public health policy.
