

Here are the reasons why I think Montgomery County should allow high school football to be played.

High School Football Does Not Spread Virus more than any other sports

It will be a very short season.

Other counties are allowing football and other sports to be played this spring.

The vaccines are reducing the spread of the virus.

Both Professional and College football games were played at the height of the pandemic enforcing the protocols that were enforced if any players/coaches tested positive for the virus which all sports should follow.

It would allow the players the opportunity to show their talent to the college scouts which may be the only way some of the players to go to college.
