

Medical Scientist Opposes Vaccine Passports

Dear Montgomery County Executive Elrich and Councilmembers Albornaz, Navarro, Glass, Hucker, Katz, Jawando, Navarro, Rice, and Riemer:

My name is Dr. “Melody” Myung Lee, and I have been a proud resident and taxpayer of Montgomery County for more than 30 years as well as small business owner in the county of over 12 years. I want to share my unique perspective with you as a Medical Science researcher with specializations in multiple facets that directly pertain to Covid-19.

In terms of my background, I am a graduate of Seoul National University, South Korea’s most prestigious academic institution, from which I earned my **Medical Doctorate** degree (M.D.). Following was my **Post-Doctoral Fellowship in Immunology** at the renown Memorial Sloan-Kettering Cancer Center in New York. Subsequently, I earned my **Ph.D. in Molecular Biology** at Cornell University Graduate School of Medical Sciences and continued my research career at N.I.H. in the advancement in Retroviral DNA Integration (**Molecular Virology**).

Through my nearly 3 decades in the Medical Sciences, I have specifically worked extensively with **PCR’s, antibody tests, and viruses**. I also have first-hand experience with Covid-19, treating myself and my son a month and half before the illness became more widely known in its name to the public including us. In short, as a Medical Doctor, Immunologist/Microbiologist, Molecular Virologist, and with direct experience, I consider myself highly qualified to discuss about the current situation.

For the past 2 years, I have been highly disturbed by what has been going on with Covid-19, from the scientifically unjustified Lockdowns and other draconian measures which have caused far more harm than benefit to people all around the world. Here, I am writing to you **NOT to implement Vaccine Passports**. Below are my rationales to **oppose Vaccine Passports**.

1) It has been widely publicized that the Spike Protein Encoding Nucleic Acid (SPENA) Injections NEITHER protect the SPENA Injected from getting Infected NOR prevent them from Transmitting to others. Instead, the SPENA Injections makes the SPENA Injected MORE susceptible to Re-Infection (aka “Breakthrough Cases”).

2) According to the U.K. Health Security Agency data, boosters “would provide a very short lived temporary boost to the immune systems of the Injected population before decimating their immune systems much more rapidly.” Last week, the WHO and European Medicines Agency warned against repeated injection of boosters because of damage to Immune System.

3) The SPENA Injected—the vast majority of whom are healthy to begin with—have suffered from the following (in no way all-inclusive) documented serious adverse events:

Blood Clots throughout the body (stroke, paralysis, pulmonary embolism) and Thrombocytopenia (low platelets leading to excessive bleeding), Myocarditis (potentially leading to Cardiac Arrest) disproportionately affecting young males, aberrant Menstruation and Miscarriages, perpetual Tinnitus (leading to suicide), Anaphylactic Shock, and Autoimmune Disorders (thyroiditis, Guillain-Barré Syndrome). The SPENA Injection did NOT go through proper safety testing. The aforementioned adverse events are only the tip of the iceberg. With time, we will see more, even worse forms of side effects.

4) For the vast majority of the population, SARS-2 manifests symptoms in a range from asymptomatic, common cold, to mild flu. In rare cases, there are some individuals who experience severe cases in which it is manifest as an over-reaction of the individual's immune system. You do NOT inject the entire population, for the sake of a small minority's excessive immune reactions, with SPENA in the name of vaccine. You TREAT the affected, and there are highly-published and highly-effective methods of Early Treatment.

5) Natural Immunity is superior in every way to the SPENA-induced one, and the majority of Americans have already acquired Natural Immunity via symptomatic or asymptomatic transmission. This Natural Immunity will be weakened by the SPENA Injection. Furthermore, people with Natural Immunity will face far more dangerous adverse events.

6) The point of Vaccination is to protect the injected. I have no problem with essential vaccination during childhood as I did for myself and my child. However, as an expert in Immunology, Microbiology, and Molecular Virology, I STRONGLY RECOMMEND AGAINST getting Injected with the SPENA for my loved ones.

I sincerely urge you to open your eyes to the reality of true science, and take action accordingly by Opposing the Vaccine Passports. Thank you.

Truly,
Dr. "Melody" Myung Lee, M.D., Ph.D.
