I'm taking the time to write you and ask that the data center construction slow down. So much is still unknown or emergent about the impacts of data centers on local communities and surrounding waterways and groundwater. I ask that should data center construction move forward, that water usage, impacts, etc be public record. Limits are needed.

Things are far too uncertain on data centers right now. Most residents in MoCo and across the country have turned against data centers. The State is just beginning a study of data centers. The affordability crisis is directly tied to data center capacity. What is the rush to jump in and allow large scale data centers here? There is every reason to wait, particularly with a project with unknown impacts speeding toward approval with no regulations. Slow down - get this right.
