

Margaret Chasson  
Kensington, MD

Since the establishment of the Agricultural Reserve I have been following county actions regarding land use in the county. The impact of Data Centers in Virginia upon the western edge of Montgomery County through the need for power to be delivered across this county has been a matter of concern. The many ways that Data Centers can negatively impact living conditions and especially the huge amount of water required when our Reserve relies upon a single source is troubling. Please place a moratorium upon Data Center action until ways of dealing with the many negative impacts of their current structure can be identified.
