SILVER SPRING, MD

I do not support approving ANY new data centers unless the County demands and obtains the necessary statistics on their energy and water use. In particular, how much water do the centers actually use, and how does that compare to the extra water needed to support growth in the housing stock. According to a recent DMV-area study, there is no firm information on such centers' water use; and furthermore I object to any increase in electrical rates because of demand to supply more electrical power to private, profit-making enterprises like data centers. Finally, they should not impinge upon the Agricultural Reserve in any way. Thank you.
