

Good afternoon,

I am deeply opposed to any construction of data centers within my neighborhood. Every day there are new testimonies from people living near data centers who have had their lives and health horrifically impacted by pollution caused by data centers that I do not believe renewable energy can fix. A data center will heavily impact water supply as the water needed to cool servers in data centers. Data centers are incredibly energy consuming and I am worried for how this major demand of energy will impact my energy bill. Data centers are incredibly noisy. And I am a firm believer that these data centers which support AI will ultimately fail to return on its investments and may be abandoned in the future which will be a major waste for the land it would be built on. Do not approve any building of data centers.

Sincerely,
Sarah Korapati
