

Testimony on ZTA 26-01 Data Center Commercial Uses - Data Center

February 26, 2026

Sharon Lundahl

Montgomery County is such a smart county and has very talented and civic-minded people. Data centers, once built, will stay with us and have a huge impact on our environment. Of course, the rush to get them built is championed by interested parties. But why not be certain we want these operations before they are built? I want to see impact studies, so we have time to build the kind of regulations that other counties will want to use for their own data centers. Montgomery County should not plow ahead like a MAGA county just because wealthy corporate interests want to speed things up.

Thank You,

Sharon Lundahl
