

Environmentally Friendly Landscapes for Healthy Watersheds

Green Streets help slow down and clean polluted water that enters our streams and rivers when it rains. Initiated by the County, Green Streets capture stormwater runoff in small landscaped areas that let water soak into the ground while plants and soils filter pollutants. This not only prevents polluted water from going directly into our streams through storm drains, but it also replenishes groundwater and helps ensure that local streams have the base flows they need to stay healthy. Green Streets also add natural habitat and create attractive connections to neighborhoods, schools, parks, and business districts.
