Germantown, MD 20874
Gunners Lake
Sediment Removal Project

In February 2015, the County will begin the Gunners Lake Sediment Removal Project removing approximately 20,000 cubic yards of sediment from Gunners Lake. The sediment will be removed using a hydraulic dredge method. The dredge will pump the removed sediment to shore where dewatering equipment will separate the solids from the water. Clean water will be returned to the Lake. The dried sediment removed from the Lake will be transported by truck to an approved disposal facility. On average, 30 truckloads of sediment will be hauled off-site daily. The dredging will be limited to a portion of the lake extending from the northern end down to the southern tip of the island.

Please join MC DEP for a lake walk. The aspects of the project will be discussed and County engineers will be available to answer questions.

Lake Walk
Saturday, December 6, 2014
9:00 am - 10:30 am

Meet at green space adjacent to the lake between Sky Blue Drive and Port Haven Drive.
