

## **EMIS Environmental Policy**

*“We are dedicated to collecting and sharing information about our priorities, goals, initiatives and performance relating to generating clean, renewable energy via our Energy-from-Waste process. The development and deployment of the Environmental Management Information System (EMIS) will further enhance our environmental performance. Through the EMIS, we are committed to achieving and maintaining among the best environmental performance in our industry”.*

### **EMIS Goals:**

Our EMIS goals are designed to improve our environmental compliance performance. These goals are as follows:

1. Minimize the potential for non-compliance through environmental task tracking/notifications
2. Document key environmental activities through incident tracking
3. Centralize environmental data
4. Promote communication

### **EMIS Implementation:**

Our EMIS utilizes customized software that was developed and maintained by a third-party vendor. It consists of two distinct, but interrelated modules. Both modules are designed to assist our facilities in meeting and exceeding our environmental obligations.

#### ***INCIDENT MODULE***

Intent: To provide a continuing record of all key environmental activities at the facility.

#### ***TASKING MODULE***

Intent: Environmental task tracking and notifications to ensure timely permit compliance.

Each facility maintains its own EMIS and action items generated by EMIS are reviewed by the facility to ensure continued compliance.
