# POLICY

## BOARD OF EDUCATION OF MONTGOMERY

---

**Related Entries:** ECM, ECM-RA  
**Responsible Office:** Supportive Services

### Energy Conservation

#### A. PURPOSE

To ensure that Montgomery County Public Schools pursues energy conservation efforts and practices that continue to preserve our natural resources while providing a safe and comfortable learning environment for all staff and students

#### B. ISSUE

The nation is experiencing a depletion of its natural resources which include crude oil, natural gas, and other energy sources. The Montgomery County Public Schools is committed to reducing its consumption of natural resources and still improving the quality of its educational programs. The Montgomery County Board of Education desires to work with other agencies of government and plan school system activities so that the learning environment of essential education programs are not curtailed or compromised.

#### C. POSITION

1. The superintendent of schools shall continue to establish procedures to ensure the conservation of natural resources by personnel at all levels of the school system, which shall include the following practices:
  - a) Generation of a system-wide resource conservation plan that outlines goals and objectives
  - b) Development of acceptable energy conservation guidelines as outlined in the resource conservation plan
  - c) Continued development and implementation of conservation programs
  - d) Performance of energy studies on all new MCPS construction
  - e) Monitoring the general operation and maintenance of all heating, ventilation and air-conditioning equipment

- f) Procurement and consumption management of fossil fuels and electricity
- g) Continuing reminders to staff and students of the need for conservation of all natural resources

2. MCPS will participate in a coordinated effort by government authorities to establish appropriate resource conservation plans and utility price monitoring systems to ensure that public schools have adequate supplies of essential fuels and can obtain these at the best possible prices.

#### **D. DESIRED OUTCOME**

Create a healthy and comfortable learning environment while controlling energy consumption more efficiently and diverting the otherwise rising utility costs towards educational programs. Continue development of energy conservation efforts that proportionally reduces energy consumption in new and existing facilities.

#### **E. IMPLEMENTATION STRATEGIES**

1. Should natural resources be insufficient to meet normal operating needs, the superintendent will develop further plans for the consideration of the Board of Education to conserve energy.
2. Copies of this policy and the annual resource conservation plan will be sent to appropriate school system and county government officials.

#### **F. REVIEW AND REPORTING**

This policy will be reviewed on an on-going basis in accordance with the Board of Education's policy review process.

*Policy History:* Adopted by Resolution No. 654-73, November 13, 1973; amended by Resolution No. 285-97, May 13, 1997.

## ***Electricity***

1. **Temperature Set Point:** The maximum cooling level is 76° F. Set thermostats accordingly. Some temperature variation will occur as equipment cycles on and off. Report cooling problems only if room temperature measured with a thermometer stays three degrees or more above or below set point.
2. **Controls:** Do not attempt to tamper with energy management or HVAC controls on equipment. Any problems with controls or equipment should be dealt with promptly through the work order system. Provide frequent inspection of pneumatic controls, including system filter/dryer, automatic bleed, and compressor run time. Test and calibrate all pneumatic thermostats at the start of each cooling season.
3. **Computers:** Shutting down computers not in use is important. Computers in our schools consume more energy than the lighting. **Teachers and students should shut down the computer at the end of each use, unless a new user is waiting.** Sweeps should be made to shut down all computers immediately after school hours and before weekends, holidays, and breaks. Use of **flat panel monitors** is encouraged whenever procuring new displays. Flat panel monitors use 70 percent less energy than CRT models and help reduce excessive heat build-up in computer labs and closets.
4. **Lights:** Teachers should ensure lights are turned off when leaving the classrooms unoccupied, even for a few minutes. Every effort should be made to avoid accidentally leaving lights on in storerooms, crawl spaces, attics, and other unoccupied spaces. Corridor lighting should be reduced in over-illuminated areas and turned off during unoccupied periods. Gym, auditorium, and stadium lights should be controlled on a tight schedule. Gym lights should be turned off during class periods when the gym is not in use.
5. **Light Levels:** Light levels may be reduced to the acceptable levels for different activities as listed on the attached chart: **Recommended Footcandle Levels.** Your SERT Energy Facilitator will provide you with instruments and instructions to successfully reduce light levels and save energy.
6. **Task Lighting:** Use a desk lamp (with compact fluorescent bulb) instead of overhead lighting as much as possible, especially at teaching stations when students are out. Computer labs should use compact fluorescent uplights (torchiere lamps) to improve visibility of computer screens, and save energy by turning out overhead lights.
7. **Lighting Maintenance:** Maintain automatic lighting controls, occupancy sensors, or daylight sensors where installed. Light fixtures and lenses should be cleaned annually and the date documented.
8. **Daylighting:** Whenever possible, teachers should utilize natural light instead

of artificial light. Window shades should be adjusted to make best use of daylighting. Most classroom lights are controlled by two or more switches, so artificial lighting can be reduced when daylight is available.

9. **Exterior Lighting:** All outside lighting should be off during daylight hours. Building security lighting should be on from dusk to dawn daily. Parking lot lights should be turned off at the close of the regular school day or evening activities (by 12:00 midnight at the latest) and back on at 6:00 a.m., to dawn (unless sunrise is before 6:00 a.m.) Building service managers should notify the maintenance depot of any irregularities in exterior lighting control.
10. **Cleaning Crews:** All lights are to be turned off when students and teachers leave school. Building service workers are to turn on lights only in the areas in which they are currently working.
11. **Holidays and Breaks:** All electrical equipment should be shut down or unplugged per checklists before long weekends and school breaks.
12. **Off-Peak Use:** When possible, electricity use (for kilns, laminators, etc.) should be scheduled prior to 12:00 noon when lower, off-peak rates are in effect.
13. **Infiltration Control:** All windows and outside doors are to be kept closed when cooling systems are in operation. Corridor doors and doors to classrooms should remain closed when HVAC is provided. Doors to gyms and pools are to be kept closed. Report faulty door closers to the maintenance depot.
14. **Vending Machines:** Vending machines are major electric users that often cost more to operate than the school receives in revenues. A typical soft drink machine costs over \$500 per year to operate. Measures should be taken to minimize the number of vending machines and the hours of use.
  - a. Review your school's vending machine use and have little-used units removed.
  - b. Vending machines must be removed from the main entrance or lobby of all schools effective with the 2004-2005 school year.
  - c. Unplug vending machine units when "Sold Out" is displayed.
  - d. Operation of vending machines must be automatically controlled per the following specifications.

1. Use only the number of fans necessary at all times to provide adequate ventilation.
2. Turn fans off upon completion of cooking.
3. Operate two-speed fans on the lower speed when possible.
4. Keep filters and extractors clean.

# WATER USE

## GENERAL

1. **Be alert for water leaks** and water main breaks. Look for continuous water flow through the water meter at any time, ponding of water around the building, and report leaks to maintenance immediately. A broken water main can release tens of thousands of dollars in water a week until it is repaired.
2. **Report and repair leaking faucets** and faulty flush valves promptly. Check and adjust valves for proper timing annually.
3. **Water is an MCPS resource and not to be given away or used by outsiders.** Users scheduled through ICB are allowed to use water related to their activities. Do not provide free water to road maintenance tankers or any other non-MCPS agency.
4. Do not allow local residents to use school hose bibbs or to control irrigation.
5. **Car washes may not use school water supplies.** Off-site arrangements may be made with a local gas station to hold a car wash for fund raising.
6. The utility budget pays for bottled water only in elementary school portable classrooms.

## IRRIGATION

These general guidelines are supplied for the education of individuals operating turf irrigation equipment to help with the successful management of healthy turf.

1. **Avoid Excess Watering.** Excessive watering promotes fungal growth and prevents the development of long, deep root systems needed for healthy turf.
  - a. **Use a simple rain gauge.** Turf in our climate needs only 1" of water per week for optimum health. Use weather reports or your school's rain gauge to determine whether irrigation is needed each week.
  - b. **With timer systems, check zones for proper saturation levels.** Make sure water saturates the root zone when irrigating but no further. No runoff should occur from the area being watered.
  - c. **Make sure irrigation systems are turned off when it rains.** The installation of rain switches on automated irrigation systems is highly recommended.
2. **Irrigate only in early morning or late evening hours.** This timing minimizes evaporation to the air.
3. **Irrigate only two or three times a week.** This interval promotes deeper root growth, which establishes healthier and sturdier turf.
