Bethesda Avenue Paving Project

Project to Begin Soon, Includes Night-time Road Patching, Milling and Paving

PURPOSE
This newsletter is to inform you of the upcoming night-time road pavement repairs and repaving of Bethesda Avenue from Woodmont Avenue to Arlington Road, and to describe the process. This pavement system preservation project employs long term strategies to preserve and enhance the physical and operating conditions of the roadway system as it exists and assures a system serviceable for many years. This project falls under the County’s Spot Improvement Program.

BACKGROUND
The Montgomery County Department of Transportation’s (MCDOT) Division of Highway Services (DHS) maintains nearly 5,200 lane miles of streets and highways in the county’s transportation system. As part of our pavement system preservation efforts, MCDOT initiated a new Pavement Management System in 2008. MCDOT recently completed a third countywide pavement condition survey of all county roads, identifying and rating the condition of each. This pavement management system has enabled the development of countywide roadway pavement repair schedules based on a formula based rating system coupled with budgetary parameters.

SCOPE OF PROJECT
Overall, pavement conditions of Bethesda Avenue were generally rated as unsatisfactory, with some areas described as needing more attention. This rating meets the criteria for Roadway Preservation using full-depth patching and hot mix asphalt (HMA) overlay.

PROJECT WORK PLAN
Generally, the work will proceed as follows:

1. Conduct survey — MCDOT inspectors will identify areas of the roadway that, prior to resurfacing, may require full depth asphalt patching of the pavement or other repairs.

2. Full Depth Patching — Full depth patching restores the pavement’s structural integrity and capacity to support vehicle loads. The areas of distressed pavement marked by the MCDOT inspectors is removed and replaced with new pavement. The final paving of the road will cover these patched areas and provide a smooth ride.

3. Gradall excavation and HMA resurfacing - Given the current composition of Bethesda Avenue, the typical milling process cannot be employed as part of this project. In order to remove the existing road surface, a Gradall will be used to excavate Bethesda Avenue before the resurfacing process can begin. Following the successful removal of the existing road surface, the entire impacted area of Bethesda Avenue will be resurfaced with new, hot mix asphalt (HMA). This new HMA surface will improve the ride-ability of the roadway, restore positive drainage, and improve the overall appearance of Bethesda Avenue.

4. Utility Adjustments - Sewer and storm drain manholes, water valves and gas valves, and other underground utility access covers need to be elevated to the same grade as the newly proposed pavement; usually 1” to 2”. During construction activities, all utility surface adjustments will be maintained by the placement of temporary asphalt ramps until placement of the final paving occurs.

5. Paving with hot mix asphalt- Asphalt is delivered to the site in dump trucks. The hot material is then transferred into the hopper of an asphalt paving machine. The paving machine places the hot asphalt in a uniform thickness and provides initial compaction. Following placement, steel wheeled rollers complete the compaction effort until field testing indicates that all relevant specifications have been met.

6. Replace roadway lane markings - Permanent lane markings will be replaced shortly after paving operations.

SCHEDULE
The project is expected to start on or about July 16th 2017, and will take approximately five (5) nights to complete, weather permitting. To mitigate inconvenience to nearby businesses and the traveling public, construction will be performed at night between the hours of 8:00 pm and 5:00 am, Monday through Friday. We apologize in advance for any inconvenience.

IMPACTS
Continuous traffic will be maintained at all times utilizing lane closures. Street paving will necessitate temporary lane closures and temporary parking restrictions. Signs will be posted identifying such restrictions. Access to business and residences will be available at all times, however minor delays may be experienced as workers restrict traffic from freshly placed hot mix asphalt.

Generally speaking, this work is best characterized as noisy and disruptive. However, MCDOT and its contractors will take all necessary steps to mitigate any inconveniences this work may cause.

Quality control for the entire project will be managed by County inspection staff to ensure that the project meets County specifications.

Thank you for your cooperation and patience as we work to improve the county infrastructure for residents and users.

NIGHT TIME PAVING PROJECT IN BETHESDA

SAFETY NOTICE

Please drive gently and safely through the work site and kindly remember that while repair work is underway, personnel and construction vehicles will be moving around the site. Some materials may be stored in the area. Please use caution when walking or driving through the construction zone. Children may be attracted to the noise and machinery, so we ask that you please keep all children under close supervision at all times, even after the work is completed for the day. Also, please follow the direction of flaggers and temporary signs and traffic control devices. We appreciate your patience and cooperation while we make these much needed improvements to the infrastructure. If you have a medical condition or another issue that may be impacted by the construction activities, please alert the Project Manager listed below or Josh Faust, Public Outreach Manager, at 240-777-7642.

IMPORTANT MCDOT CONTACTS

Project Manager: Sean O'Connell 240-777-7692
Program Manager: Donald Noble 240-777-7601

Should your questions be of a more general nature please contact the MC311 Call Center at 3-1-1 or 240-777-0311.
