4 Executive Summary

MCDOT RideOn serves Montgomery County with more than 5,400 bus stops and 81 distinct routes. In Fiscal Year 2025, Montgomery County Transit Services reported an actual ridership of 19,170,677 and operated under an approved budget of $175 million. The RideOn fleet consists of 383 buses, including 49 zero emission vehicles, with additional environmentally friendly buses currently being procured. Key services provided by MCDOT Transit Services include RideOn fixed route transit service, Ride On extRa—a limited stop service along Rockville Pike (MD 355), Flex—an on-demand option servicing Glenmont/Wheaton and Rockville, and Flash—a Bus Rapid Transit system operating on the US 29 corridor. These services reflect Montgomery County's commitment to accessible, sustainable, and comprehensive transportation as outlined in the Transit Services Program within the county's operating budget.

5 Audit Overview

The consultant team audited all 5,400+ MCDOT RideOn bus stops across the Maryland Counties of Montgomery and Prince Georges, along with the District of Columbia.

- Assess Americans with Disabilities Act (ADA) compliance
- Evaluate amenities available – shelters, benches, trash cans, lighting, etc.
- Evaluate the appropriateness of bus stop location (near side, far side, mid-block, sight distance, bus pull off area, parking restrictions, etc)
- Verify/Update accuracy of info in County database

Bus stops that were audited were served by RideOn, WMATA, MTA, and University of Maryland along with bus stops served by RideOn in Prince George's County, Maryland and the District of Columbia.

The bus auditing project began in May of 2024. Field work began for the most part in October of 2024 and ended in June of 2025, with additional follow up field work from June to August of 2025. The complete bus audit report was submitted in October of 2025, with the first revision submitted in December of 2025.

6 Purpose and Need

RideOn is obligated to adhere to the requirements of the Americans with Disabilities Act (ADA) as stipulated in its settlement agreement with the U.S. Department of Justice (DOJ). In the summer of 2024, the Montgomery County Office of the Inspector General (OIG) assessed ADA compliance at RideOn facilities by sampling 46 bus stops across the county and determined that the majority did not meet ADA standards. The OIG subsequently issued a report detailing these findings. According to the County's ADA compliance manager, there is a legal obligation to provide ADA-compliant facilities at all county locations, not only those with the highest usage.

It has been more than two decades since RideOn last conducted a comprehensive audit of its bus stops in 2004, during which time the RideOn network has expanded considerably. The recent report noted that RideOn is currently in the process of selecting a consultant to identify ADA deficiencies at all county bus stops, enabling targeted improvements for compliance. The consultant team have been commissioned to audit more than 5,400 bus stops countywide to gain a clearer understanding of ADA compliance gaps and to inform necessary corrective actions. In addition to evaluating ADA compliance at each bus stop, this report will also provide an overview of amenities—such as shelters, benches, and trash cans—and other features unrelated to ADA requirements.

Figure 5 – OIG Publication #24-015, June 20, 2024

7 Field Data Collection Methodology

The consultant team trained all its field staff on the specific data that they were to verify at each bus stop along with the new data that they were to collect. The County was broken down into seven geographic regions into which one team of two staff were assigned to each area to collect the data for each bus stop. Boundaries were established to avoid multiple teams collecting data for the same bus stop.

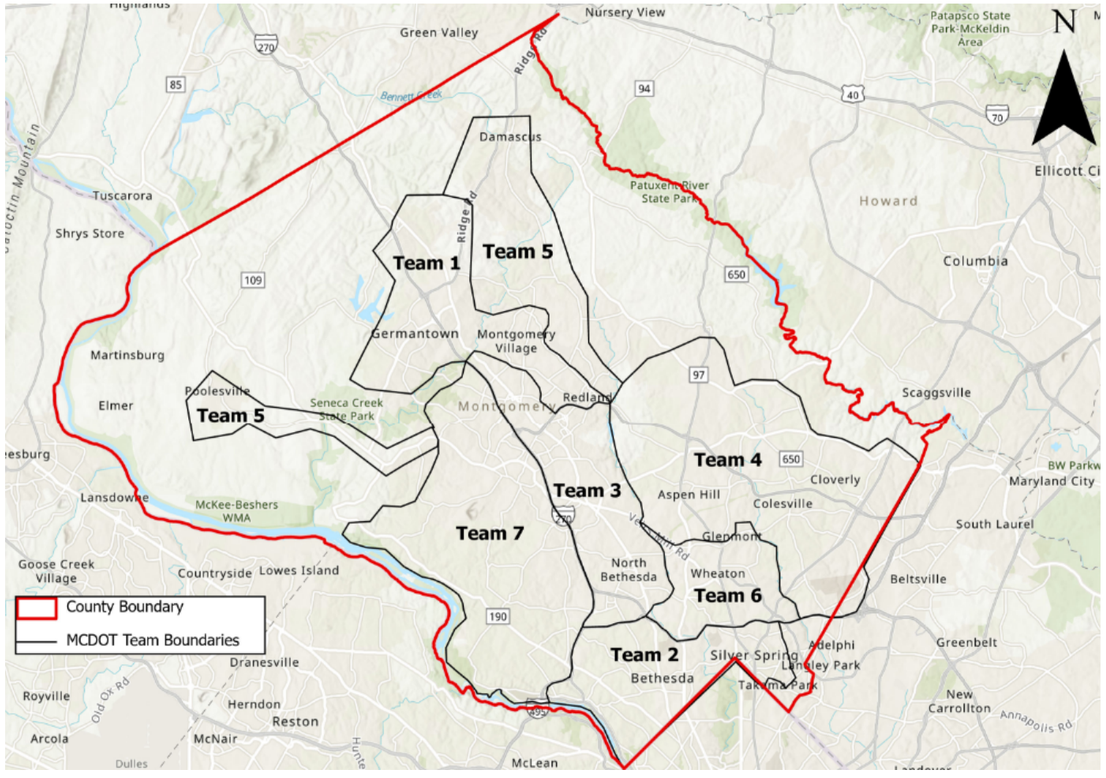

Figure 6 – RideOn bus audit team boundaries

Each team had one person that would operate an iPad, record data, and take photographs. The second member of the team would take the field measurements. Each team also had multiple back-up members to reduce delays when individuals had other commitments and maintain progress collecting the data.

RideOn provided the consultant with the existing GIS data and SQL server data from its OneStop database. When making this data available to the consultant, RideOn indicated that most of this database was created in 2010 and may be inaccurate because of how it was maintained. The consultant took this data as a baseline and created a GIS data collector application that was used to verify/update the existing data at each bus stop along with being able to collect new data. A web map was created as well to track progress.

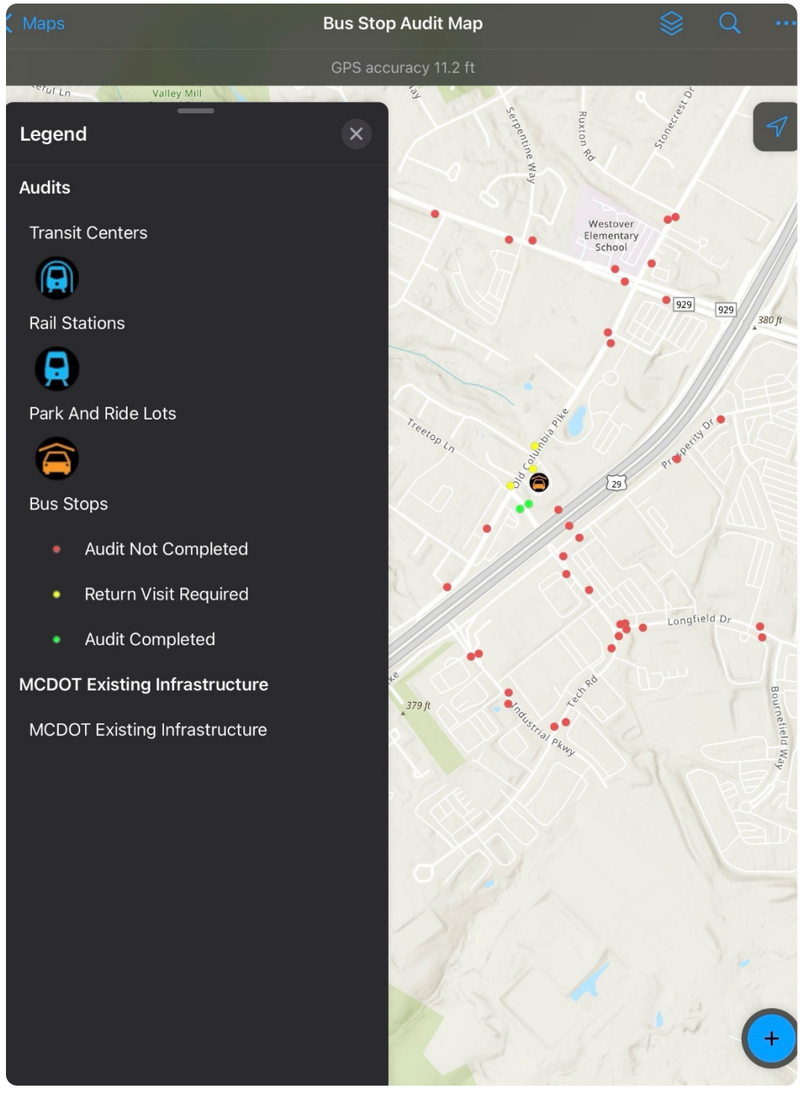

Figure 7 – RideOn bus audit GIS data collection/verification application

Each field member was trained in the methods for collecting slopes using digital levels and how to use the measuring wheel for collecting lengths and widths. Slopes were recorded to the nearest 0.1% and lengths/widths were recorded to the nearest foot.

The stated manufacturer margin of error for the specific levels that our teams used was ±0.3%.

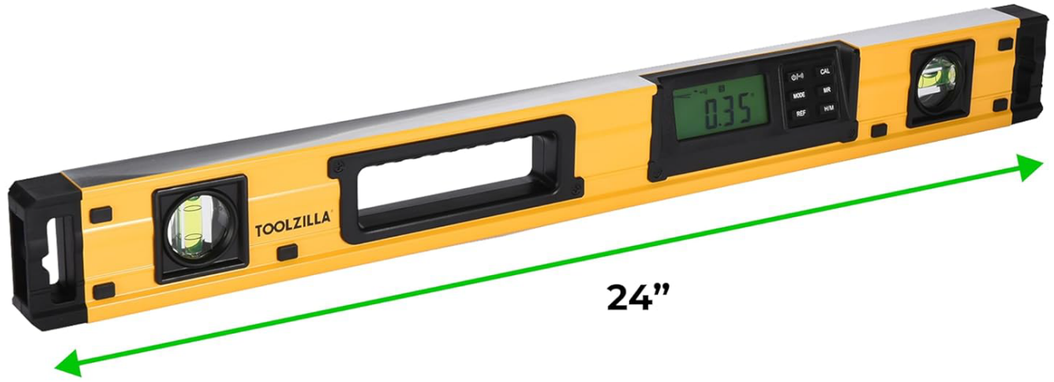

Figure 8 – Typical digital level

Figure 9 – Typical measuring wheel

Each field member was also trained on how to use the iPads to verify existing data in the app, and to record field measurements for each bus stop in the app. Each team was given a goal of collecting data on 20-30 bus stops each day that they were in the field. It was determined through bi-weekly check-in calls with the entire field staff that each team consistently met or exceeded this daily target. These bi-weekly calls were also used to discuss any safety concerns and address any questions that teams may have had on bus stops they had previously audited. To ease the time that the data collection took and make the data entered from different teams as consistent as possible, many of the fields in which specific data was to be recorded had pre-defined values. To increase consistency between each team, a data collection process was taught to each team so that potential items were not accidentally missed. Finally, before each team was able to mark a bus stop audit as complete, they were required to complete a field that indicated that the bus stop had been surveyed correctly to the best of their ability.

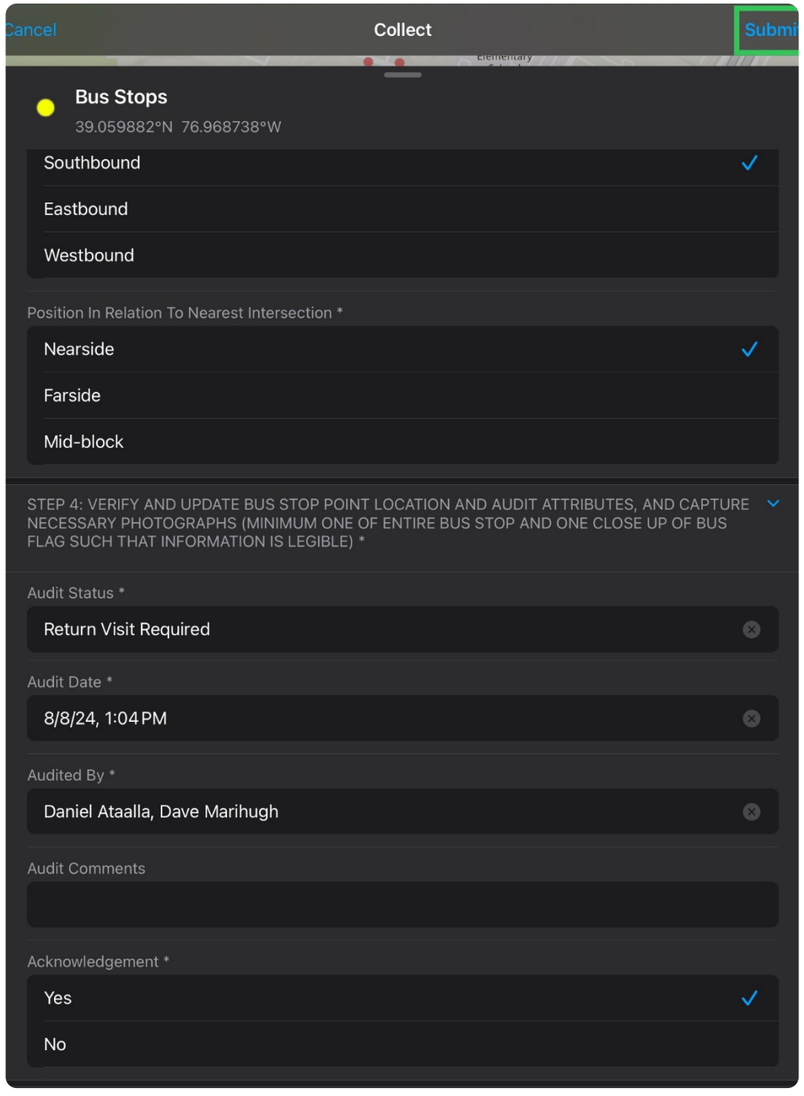

Figure 10 – RideOn bus audit GIS data collection application data acknowledgement

If this acknowledgement was not completed, the GIS app would not allow the bus stop to be marked as completed. At the end of each day, the data was synced with a web map so that the entire team could see in real time the progress that was being made. This helped the field teams track which bus stops had been audited, and plan out where/how they would conduct their future audits.

Upon completion of the initial audit, a thorough QA/QC was conducted in the office to verify the accuracy of the data collected in the office. Return visits were conducted as necessary to refine the data for reasons such as active construction during the initial visit, discrepancies, partial or incomplete data, and/or weather difficulties.

Figure 11 – Typical RideOn bus audit team

8 Audit Criteria

8.1 American with Disabilities Act Criteria

The audit criteria used for this project to confirm compliance with American with Disabilities Act (ADA) were from the Public Right-of-Way Accessibility Guidelines (PROWAG) guidelines. The three PROWAG guidelines that were used to determine ADA compliance were:

- PROWAG Section R302 – Pedestrian Access Routes
- PROWAG Section R309 – Transit Stops and Shelters
- PROWAG Section R404 – Clear Spaces

Section R302 states that the sidewalks that connect to the bus stop shall have the following criteria:

- a minimum clear width of 4’ exclusive of the top of curb width and is free of any vertical obstructions – R302.2
- a maximum cross slope, slope that is perpendicular to the roadway, of 1:48 (2.1%) – R302.5.1
- changes in vertical elevation shall not exceed ¼” – R302.6.2
- a running slope, slope that is parallel with the roadway, can match that of the roadway if it exceeds 5% - R302.4.1

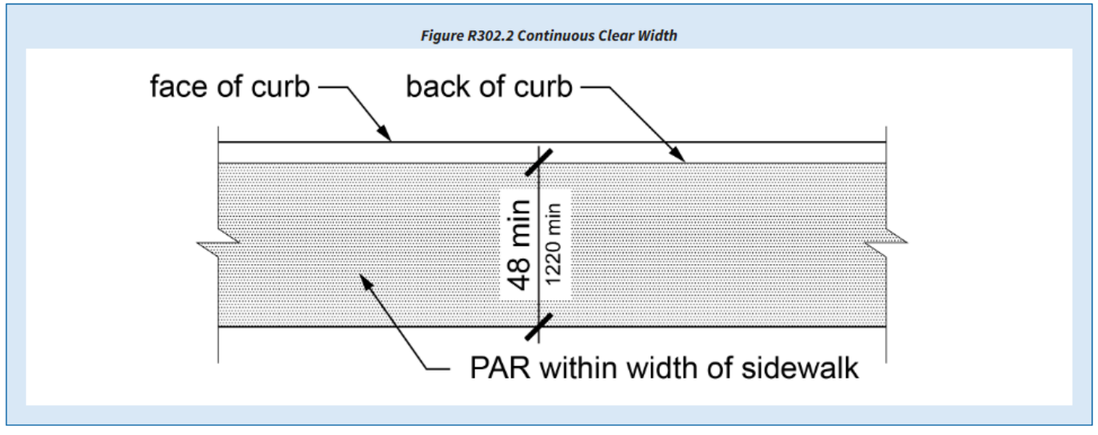

Figure 12 – PROWAG, Section R302.02

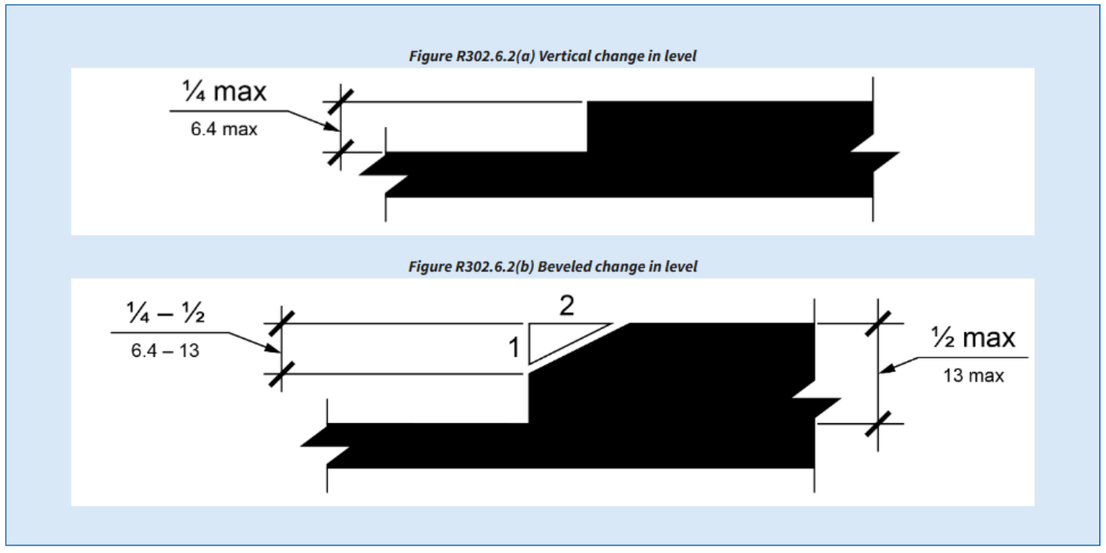

Figure 13 – PROWAG, Section R302.6.2

Section R309 states that each bus stop shall have a minimum of one boarding and alighting pad with the following criteria:

- a minimum width of 5’ – R309.1.1
- a minimum depth of 8’ depth, inclusive of the top of curb width – R309.1.1
- a maximum cross slope, slope that is perpendicular to the roadway, of 1:48 (2.1%) – R309.1.1.2
- a running slope, slope that is parallel with the roadway, shall match that of the adjacent roadway – R309.1.2.2

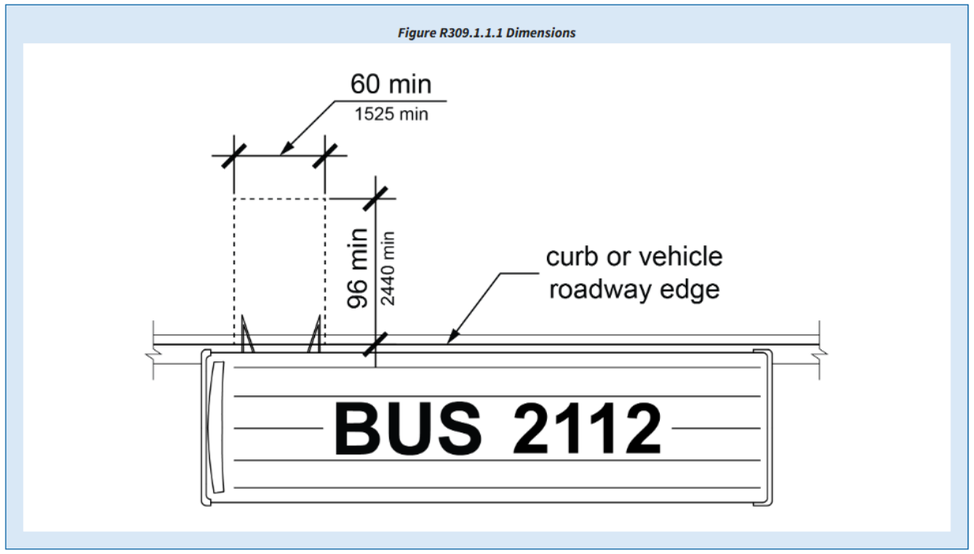

Figure 14 – PROWAG, Section R309.1.1.1

Figure 15 – RideOn bus deploying its wheelchair ramp (Source Raydel Compres-Wikipedia)

If a bus shelter was present, Section R309.2.1 was used to determine a bus shelter ADA compliance using the following criteria:

- the pedestrian route from the bus shelter to the boarding and alighting pad shall comply with section R309.1.2 – R309.2.1
- each shelter shall provide a clear space that is a minimum of 30” wide by 48” deep and have a maximum slope in both directions of 1:48 (2.1%) – R309.2.2, R404.2, and R404.3

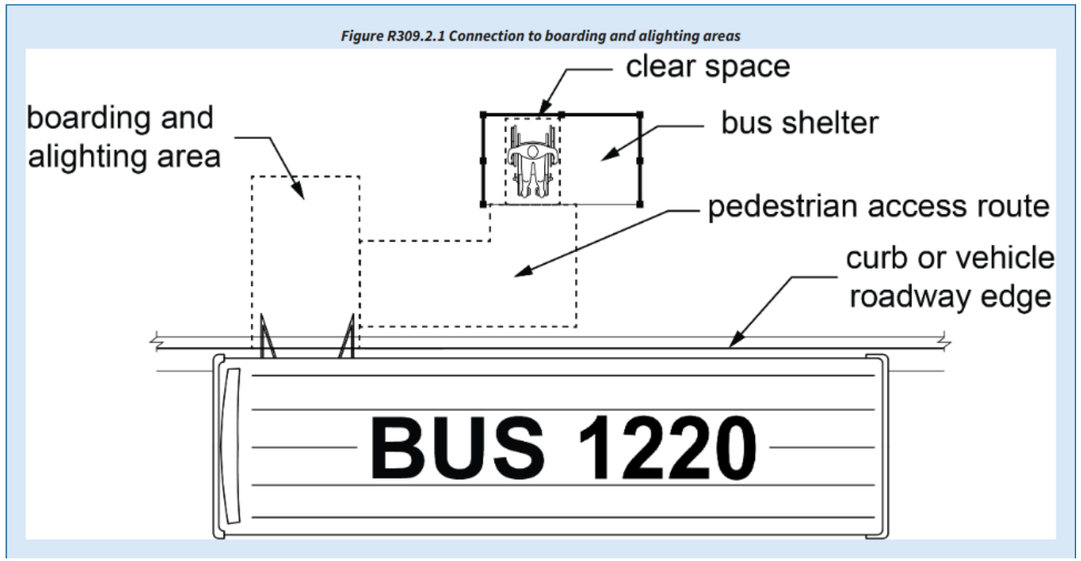

Figure 16 – PROWAG, Section R309.2.1

It was requested by RideOn to note where bus tops are not grade separated or typically located on a curb and gutter. Using the previous ADA criteria, a bus stop does not have to be grade separated to be ADA compliant, though this is not desirable. Any bus stop that was not ADA compliant for any one of the criteria previously listed is candidate to be made grade separated while the bus stop is being brought into ADA compliance. There were a number of bus stops described in *Section 9* of the report that are completely ADA compliant but not separated.

8.2 Bus Route and ID

The consultant team systematically documented each audited bus stop by photographing both the bus flag and the sign denoting an active stop. Bus stops generally fall into one of three categories. The most prevalent type is a RideOn-only serviced stop (see *Figure 17*). The Stop ID number displayed on the sign corresponds directly with the Stop Code in the GIS database. Each Stop ID number is uniquely assigned to facilitate RideOn’s tracking of its bus stops.

The second category comprises shared service stops utilized by both RideOn and WMATA (see *Figure 18*). These signs feature both a WMATA Stop ID and a RideOn Stop ID, corresponding to their respective sections of the signage. While RideOn maintains all bus stops within Montgomery County, the WMATA Stop ID enables internal tracking within the WMATA system. The RideOn Stop ID retains its function as described above.

The third category consists of stops serviced exclusively by WMATA (see *Figure 19*). The WMATA Stop ID here serves the same identification purpose as in shared service stops. Although not displayed, these WMATA-exclusive stops also have an associated RideOn Stop ID for record-keeping purposes.

Figure 17 - Typical RideOn only bus flag

Figure 18 – Typical RideOn/WMATA Metrobus shared bus flag

Figure 19 – Typical WMATA Metrobus only bus flag

8.3 Bus Stop Physical Assets

The consultant team collected the physical assets at each bus stop if any were present. These included Bus Shelters, Trash Cans, and Benches. If a Physical Asset was encountered, it was given a condition value of Good, Fair, or Poor. For the purposes of this report any asset if poor condition should be replaced.

8.3.1 Bus Shelters

The consultant team was tasked by RideOn to identify several specific shelter types, one of which included two distinct subcategories. The Wayfarer shelter, for instance, is available in two forms: with advertisements (refer to *Figure 20*) and without advertisements (see *Figure 21*). These shelters are produced in various sizes, typically defined by the number of bays or glass panels on the rear.

Another prominent model is the Axle shelter (see *Figure 22*), which is offered solely in one size and lacks bays or rear glass panels. Similarly prevalent is the Pittsburgh shelter (see *Figure 23*), which also comes in a single size but features three bays or glass panels at the back.

The Slimline Done shelter (see *Figure 24*) is frequently encountered, particularly in the City of Rockville and at WMATA Metro stations. Its size varies based on the number of bays or glass panels on the rear.

Exclusively found within the City of Gaithersburg, the Gaithersburg shelter is consistently painted green (see *Figure 25*) and is available in multiple sizes, again determined by the number of bays or glass panels at the back.

While the Brasco Eclipse shelter is less common, its installation has become more frequent under RideOn initiatives (see *Figure 26*). This model can be manufactured in different colors but is restricted to one size. In contrast, the Brasco Interlude shelter (see *Figure 27*) is becoming increasingly widespread, most often finished in silver and available in two sizes.

The Takoma Park shelter (see *Figure 28*) is another widely observed type, located exclusively within the City of Takoma Park and offered in a range of sizes depending on the number of bays or rear glass panels.

Lastly, certain bus shelters are classified as "Other" or one-off shelters (see *Figure 29*). Typically constructed by developers or Home Associations, these do not follow any standard design or sizing conventions.

Figure 20 – Wayfarer bus shelter with advertisements

Figure 25 – Gaithersburg bus shelter

Figure 26 – Brasco Eclipse bus shelter

Figure 27 – Brasco Interlude bus shelter

Figure 28 – Takoma Park bus shelter

Figure 29 – Other bus shelter (Source MCDOT)

8.3.2 Trash Cans

The consultant team was asked to document the presence of trash cans at bus stops, including their type. It was observed that some bus stops contained more than one trash can, so the recorded number of trash cans does not accurately reflect the total count of bus stops with trash cans. There were two types of trash cans noted: free-standing trash cans (see *Figure 30*), which varied in style, finish, material, and shape but were all ground mounted; and pole-mounted trash cans (see *Figure 31*), which were generally consistent in style, finish, and material.

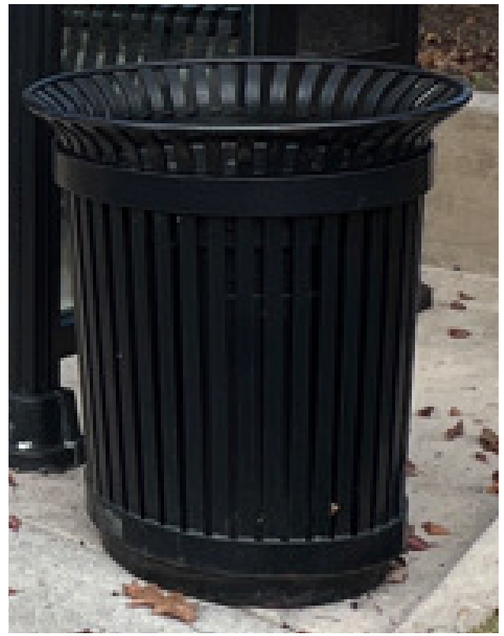

Figure 30 – Example of free-standing trash can

Figure 31 – Example of pole mounted trash can

8.3.3 Benches

The consultant team conducted comprehensive documentation of benches at bus stops, recording their specific types. Several stops contained multiple benches, resulting in a count that exceeds the number of locations equipped with seating. Two classifications were identified: ground-mounted free-standing benches (refer to *Figure 32*), exhibiting variation in style and materials; and benches located within shelters (refer to *Figure 33*), which demonstrated greater uniformity corresponding to the shelter design.

Figure 32 – Example of free-standing bench

Figure 33 – Example of bench inside shelter

8.4 Lighting

The lighting situation at each bus stop was evaluated and documented. First the team had to determine if the shelter was provided with lighting from an overhead source (see *Figure 34* and *Figure 35*). In many cases lighting was provided by overhead lighting on utility poles. If it was determined that this light would not reasonably light the bus stop at night because the utility pole was located too far away or the lighting arm was too far into the street, the bus stop would not be marked down as being lit.

Figure 34 – Example of street lighting provided from utility pole (Source Famartin-Wikipedia)

Figure 35 – Example of street lighting provided by dedicated streetlight pole

The auditors also looked to see if the shelter was lit via shelter lighting. The audits were performed during day light hours so the teams were instructed by RideOn to assume that shelter provided lighting if there was a location for lighting, typically the street name on shelter (see *Figure 36*), or if the shelter is powered via an external source or solar power, see *Section 8.5* for further discussion on shelter power sources.

Figure 36 – Example of bus shelter lighting

8.5 Bus Shelter Power Source

The bus audit teams were also instructed to check to see if the bus shelter had a power source and if so what type. There were two typers of power sources that were witnessed: solar and an external power source. The external power source was the easiest to determine because the auditors needed to look for a small conduit and transformer box (see *Figure 37)*. For the solar lighting, the auditors would look for a larger transformer box, typically located under the shelter bench (see *Figure 38*), and also check the shelter roof and see if they could see any photovoltaic cells if visible from the ground

Figure 37 – Example of shelter power source provided externally

Figure 38 – Example of shelter powered via solar

8.6 Bus Stop Position

Bus stop locations are classified as nearside, farside, or mid-block. A nearside bus stop is positioned before a named cross-street in the direction of travel. A farside bus stop is situated after a named cross-street along the route. A mid-block bus stop refers to a stop that is more than 300 feet from any named street in either direction, see *Figure 39*.

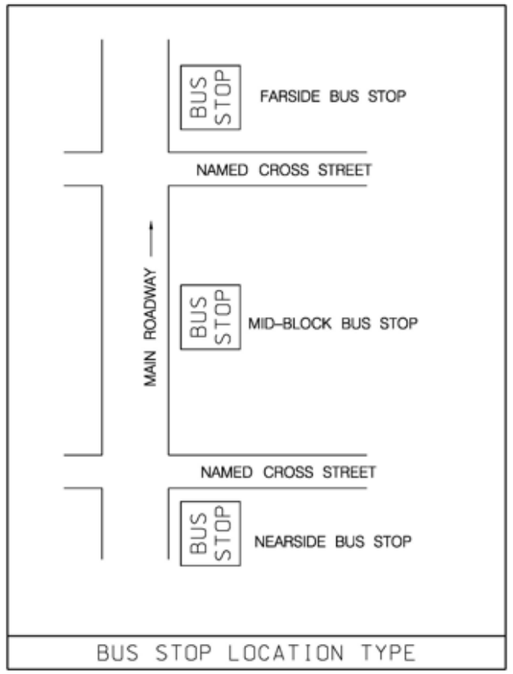

Figure 39 – Bus stop position type graphic

9 Summary of Field Data / Findings

RideOn maintains or services a total of 5,366 active bus stops across Montgomery and Prince George's counties, as well as the District of Columbia. *Figure 40* presents an example of a bus stop equipped with a shelter, while *Figure 41* illustrates a bus stop without a shelter in a suburban setting. *Figure 42* provides an example of a bus stop situated within a residential neighborhood. Additionally, *Figure 43* showcases a sheltered bus stop, and *Figure 44* highlights a bus stop lacking a shelter in an urban environment. *Figure 45* depicts another bus stop located in a rural setting.

Figure 40 – Typical suburban bus stop with shelter, Stewart Lane at Old Columbia Pike

Figure 41 – Typical suburban bus stop without shelter, Darnestown Road at Muddy Branch Road

Figure 43 – Typical urban bus stop without shelter, East Middle Lane at Maryland Avenue

Figure 44 – Typical urban bus stop with shelter, Rockville Pike at Executive Boulevard

Figure 45 – Typical rural bus stop, Ridge Road at Kings Valley Road

After reviewing all the data from bus stops audited, it was found that:

- 2,977 bus stops are not ADA compliant because they fail at least one criterion described previously on the bus landing pad ADA compliance, note that only active bus stops that are not ADA compliant are shown. To be ADA compliant:
  - The landing pad width must be greater than or equal to 5’
  - The landing pad depth must be greater than or equal to 8’, inclusive of the curb width
  - The landing pad cross slope must be less than or equal to 2.1% (note that a value of 2.4% is considered passing for the purposes of this report due to the margin of error for the digital levels)

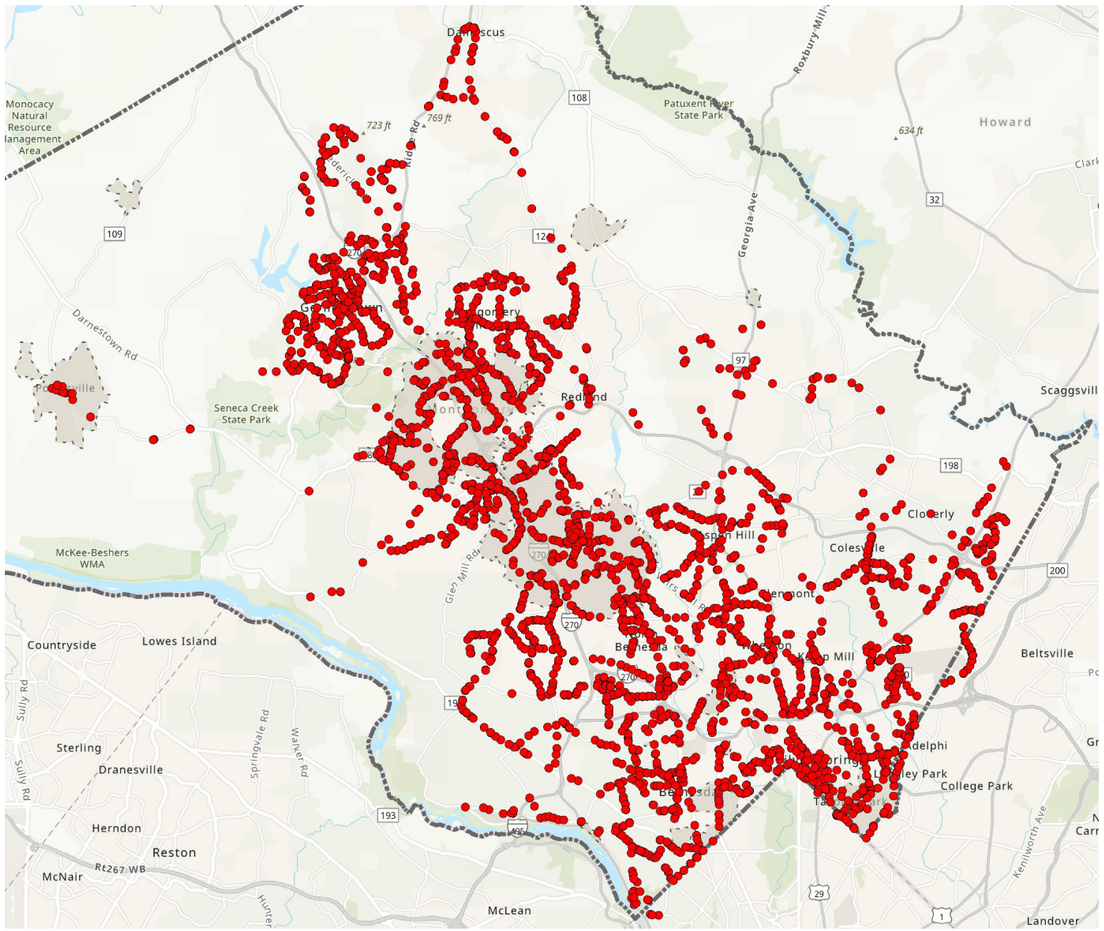

Figure 46 – Landing pad not ADA compliant map

- 1,686 bus stops are not ADA compliant because they fail at least one criterion described previously on the sidewalk ADA compliance, note that only active bus stops that are not ADA compliant are shown. To be ADA compliant:
  - The sidewalk width must be greater than or equal to 4’, exclusive of the curb width
  - The sidewalk cross slope must be less than or equal to 2.1% (note that a value of 2.4% is considered passing for the purposes of this report due to the margin of error for the digital levels)
  - The sidewalk must be free of vertical obstructions

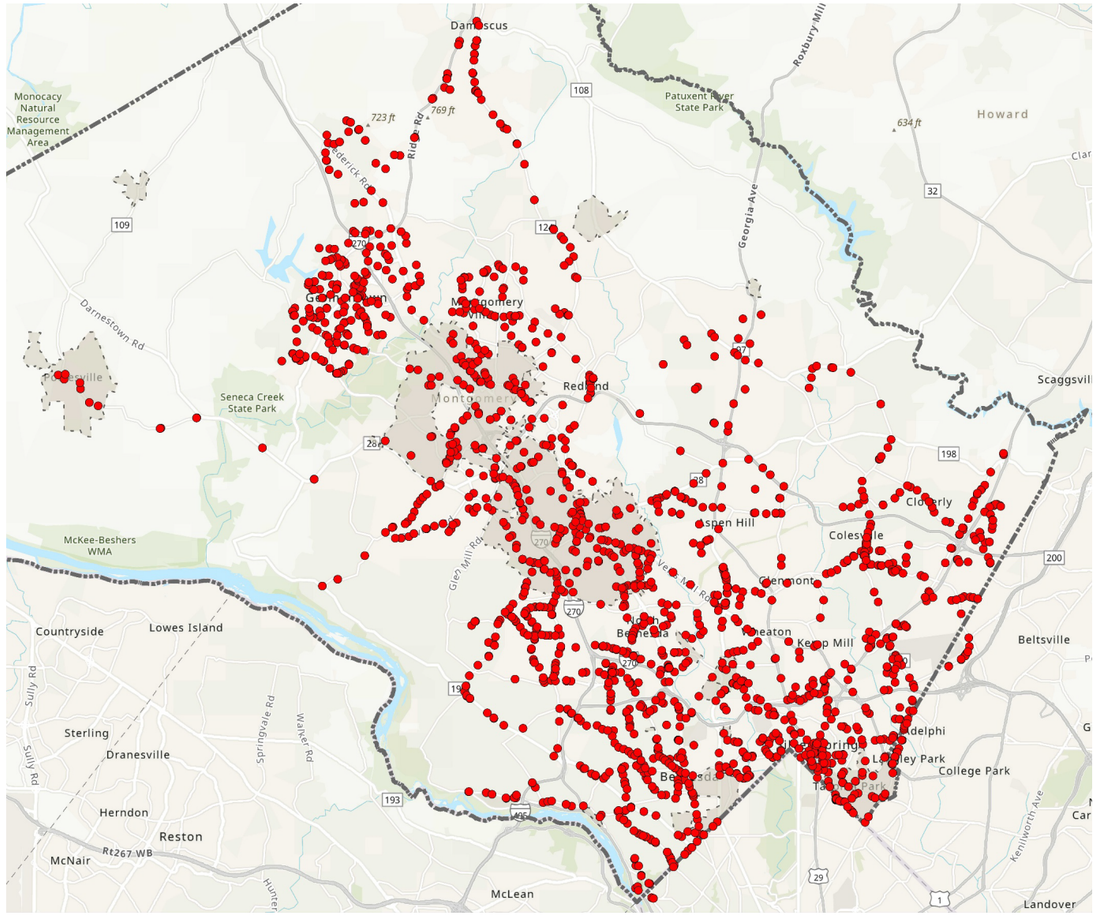

Figure 47 – Sidewalk not ADA compliant map

- 551 bus stops are not grade separated. Note that only active bus stops are shown.

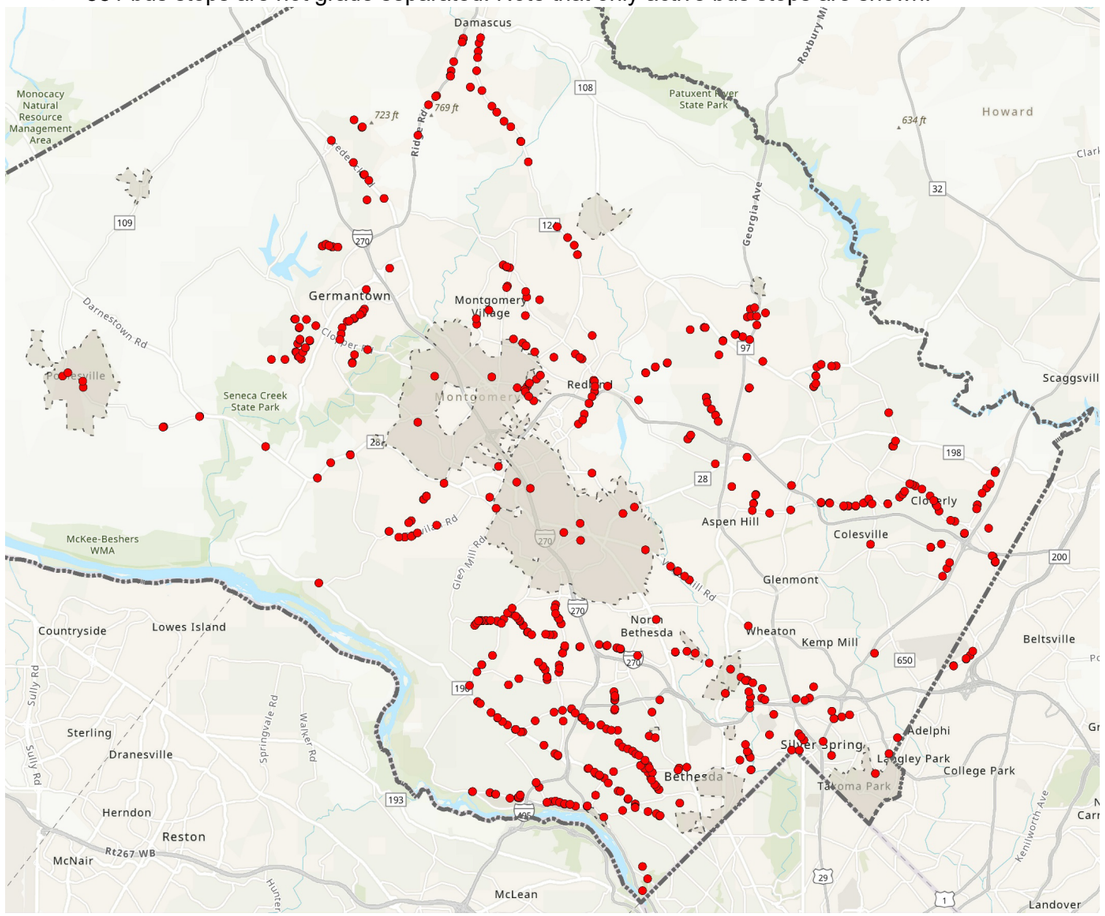

Figure 48 – Bus stops that are not grade separated map

- 159 bus stops are completely ADA compliant but not grade separated. Note that only active bus stops are shown

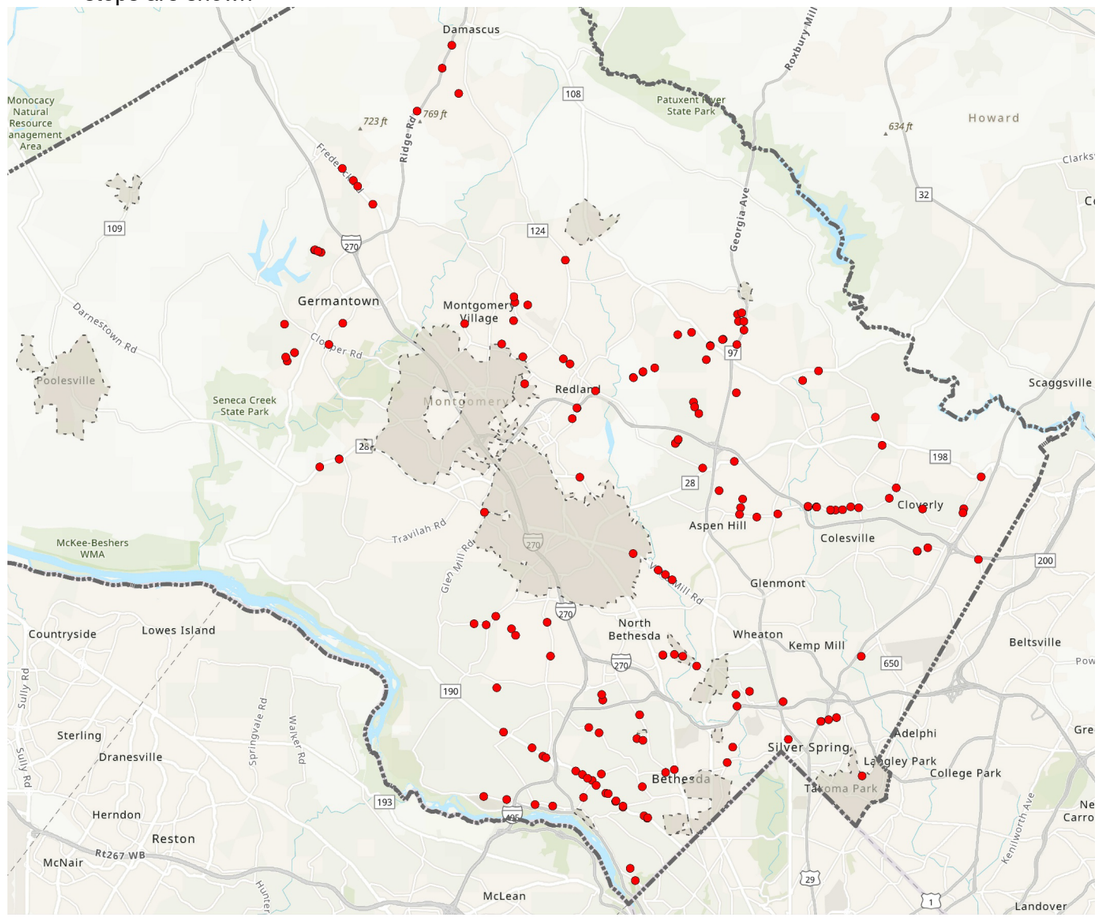

Figure 49 – ADA compliant bus stops that are not grade separated map

- 41 bus shelters are not ADA compliant because they fail at least one criterion described previously on the bus shelter ADA compliance, note that these are only bus shelters at active note stops. To be ADA compliant:
    - A wheelchair accessible space of a minimum of 30” wide must be provided in the bus shelter

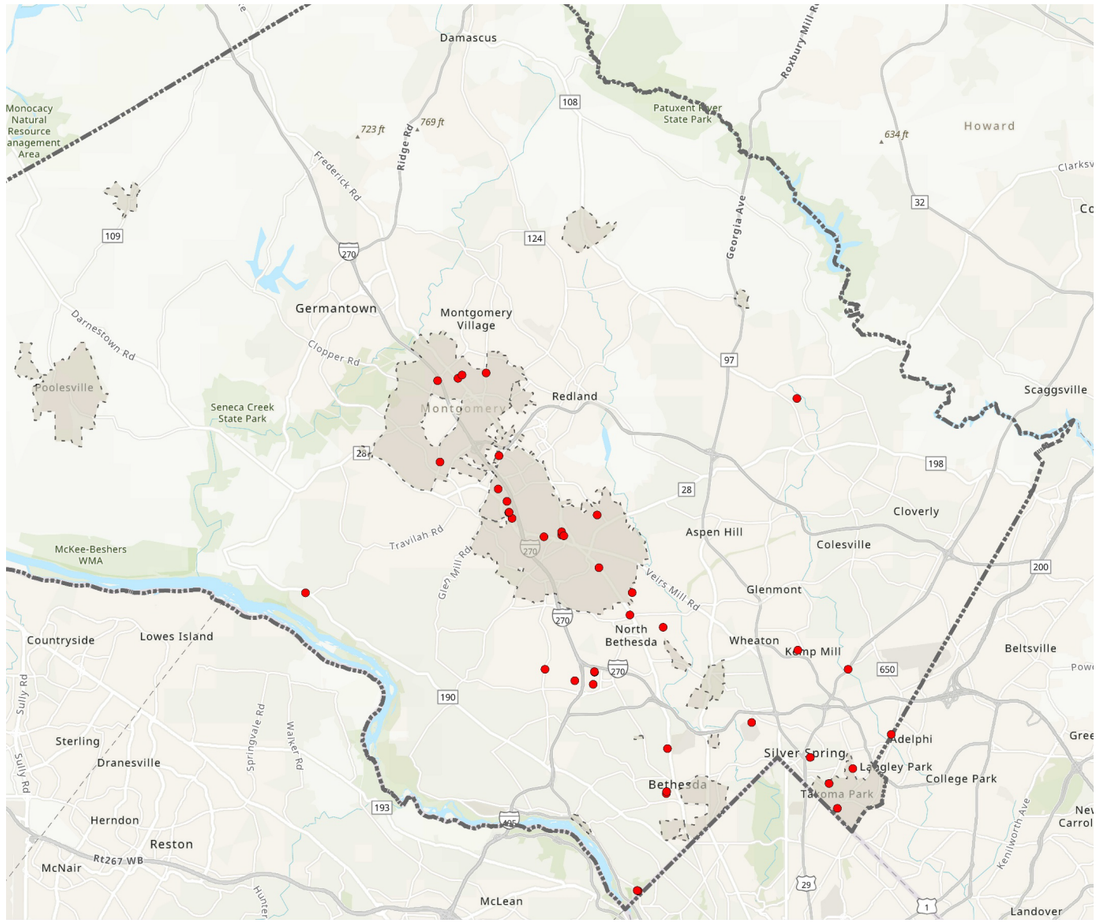

Figure 50 – Bus shelters not ADA compliant map

- 270 bus shelter pads are not ADA compliant because they fail at least one criterion described previously on the bus shelter pad ADA compliance, note that these are only bus shelter pads at active bus stops. To be ADA compliant:
    - The wheelchair space provided inside the bus shelter must be less than or equal to 2.1% (note that a value of 2.4% is considered passing for the purposes of this report due to the margin of error for the digital levels)

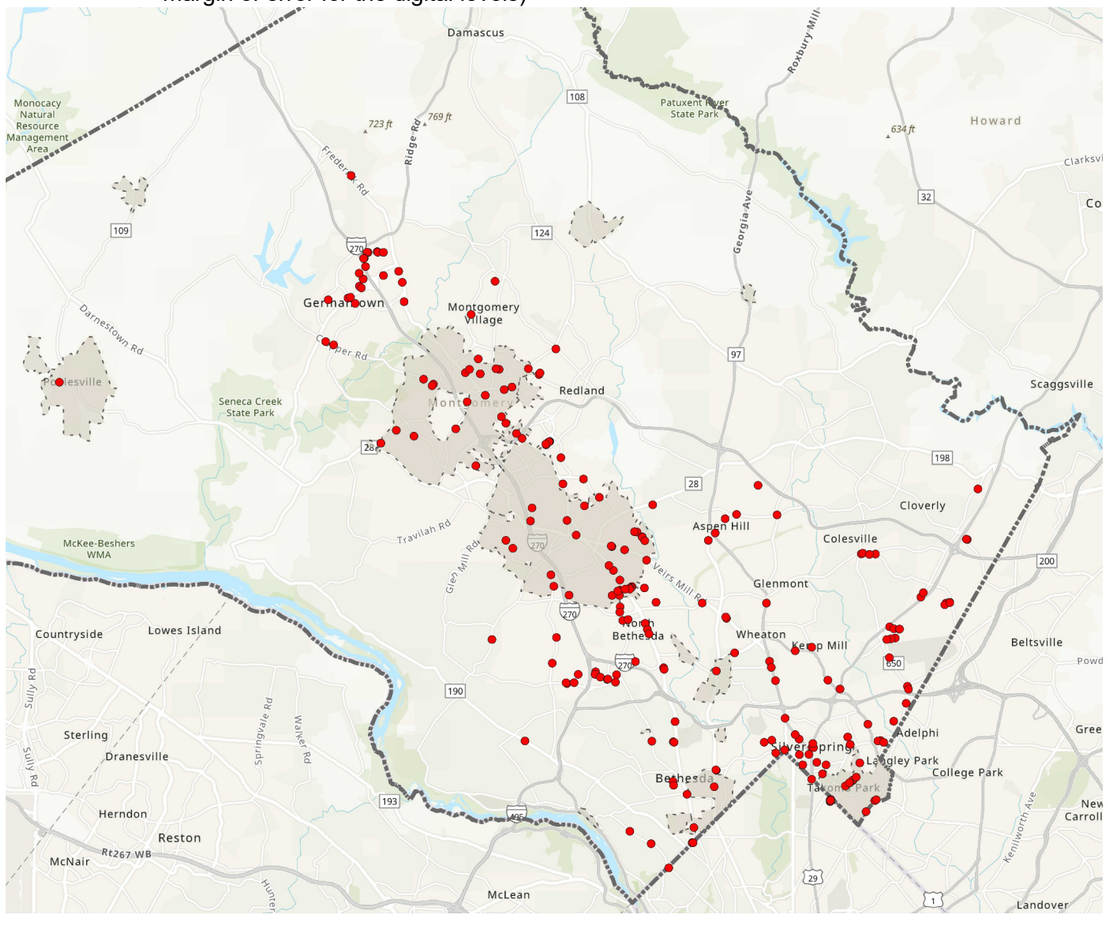

Figure 51 – Bus shelter pads not ADA compliant map

- 30 bus shelters that are in poor condition and should be replaced, note that these points are only bus shelters at active bus stops.

Percent	100.0	62.4	68.0

Table 10 – Existing bus shelter pad statistics, ADA compliance

* Bus shelter pads at active bus stops only

** For the purposes of this report 2.4% is considered ADA compliant due to the digital level margin of error

10 Prioritization / Scoring Methodology

After completing the field audit phase of the study, the consultant team further refined and reviewed the scope and location of proposed bus stop improvements in the office. The data collected was output into a sortable excel/spreadsheet format for further refinement.

The consultant team analyzed the data and impacts, then prioritized and categorized proposed improvements. Priority was determined based on ADA compliance.

Bus stop landing pad and sidewalk cross slopes that were between 2.1% and 2.4% percent were considered passing for the purposes report because the digital level's manufacture's stated margin of error was ±0.3%. Any cross slope that is between 2.1% and 2.4% should be further investigated.

Bus Stop ADA Pedestrian Prioritization

- Bus Landing Pad 1 Prioritization (2 multiplier)
  - (4) Stop missing a bus landing pad
  - (3) Stop with a bus landing pad but <5' wide and/or <8' deep
  - (2) Bus Landing Pad that is ≥5' wide and ≥8' deep but perpendicular slope >4%
  - (1) Bus Landing Pad that is ≥5' wide and ≥8' deep but perpendicular slope >2.1% and ≤4%
  - (0) Bus Landing Pad that is ≥5' wide and ≥8' deep with a perpendicular slope ≤2.1%,
- Sidewalk Prioritization (1 multiplier)
  - (5) Stop missing Sidewalk
  - (4) Sidewalk width <4'
  - (3) Sidewalk that is ≥4' wide but perpendicular slope >4%
  - (2) Sidewalk that is ≥4' wide but perpendicular slope >2.1% and ≤4%
  - (1) Sidewalk ≥4' wide with a perpendicular slope ≤2.1% and a vertical obstruction
  - (0) Sidewalk that is ≥4' wide with a perpendicular slope ≤2.1%

ADA Pedestrian Access Score (0 – 13) = Bus Land Pad 1 Score (0-8) + Sidewalk Score (0-5)

Bus Shelter ADA Prioritization

- (3) Missing or insufficient ADA Accessible wheelchair space in shelter
- (2) Shelter with ≥30" wheelchair space but perpendicular slope >4%
- (1) Shelter with ≥30" wheelchair space but perpendicular slope >2.1% and ≤4%
- (0) Shelter with ≥30" wheelchair space and perpendicular slope ≤2.1%

Bus Shelter ADA Score (0 – 3)

11 Cost Estimating Methodology

Itemized cost estimates for bus stop improvements/upgrades were prepared based on improvements identified during the field audit and refined during the office review. A price list was developed for all improvement types. Costs for each bus stop were calculated based on the specific combination of improvements identified for that bus stop in the field audit and office, see Cost Estimate Appendix.

12 Recommendations for Proposed Improvements and Costs

Bus stops that require improvements to become ADA Pedestrian Access compliant were put into 1 of 4 categories based on the lack of ADA compliance, note that any bus stop that is not active will not be given and ADA Pedestrian Access Score. Any bus stop with an ADA Pedestrian Access score of between 6 and 13 should be considered a stop with high priority that has ADA criteria that is either missing or greatly out of ADA compliance. Any bus stop with an ADA Pedestrian Access priority score of between 2 and 6 should be considered a stop with medium priority that has some ADA criteria that is slightly out of ADA. Any bus stop with an ADA Pedestrian Access priority score of between 1 and 2 should be considered a stop with low priority that has some ADA criteria that is barely out of ADA compliance. Any bus stop with an ADA Pedestrian Access score priority score of 0 is fully ADA compliant and no ADA improvements are needed.

Bus shelters identified as needing improvements for ADA compliance were assigned to one of four categories according to their level of deficiency. Shelters with an ADA shelter score of 3 are classified as high priority. Those with a score of 2 are considered medium priority, while those with a score of 1 are low priority. Shelters with no ADA Shelter score are compliant and do not require further ADA-related upgrades.

Category	ADA Pedestrian Access Prioritization Score
High Priority	6 – 13
Medium Priority	3 – 5
Low Priority	1 – 2
ADA Compliant	0

Table 11 – Bus stop ADA pedestrian access prioritization score

Category	Bus Shelter ADA Prioritization Score
High Priority	3
Medium Priority	2
Low Priority	1
ADA Compliant	0

Table 12 – Bus shelter ADA prioritization score

Category	Number Bus Stops*	Percent
High Priority	1,668	31.1
Medium Priority	963	17.9
Low Priority	853	15.9
ADA Compliant	1,883	35.1

Table 13 – Bus stop ADA pedestrian access prioritization score statistics

* ADA pedestrian access prioritization scores are only given at active bus stops

Category	Number of Bus Stops*	Percent
High Priority	41	4.9
Medium Priority	68	8.1
Low Priority	169	20.1
ADA Compliant	564	67.1

Table 14 – Bus shelter ADA prioritization score statistics

* Bus shelter ADA prioritization scores are only given at active bus stops with bus shelters

In the office, it was determined which bus stops required one or more of the bus stop improvements as previously identified in the Audit Criteria section of this report. Using the developed cost estimates for each bus stop improvement, the team was able to come up with an estimated cost to either bring a non-compliant bus stop into ADA compliance or repair/replace physical assets, such as trash can or benches, that may be in poor condition.

Improvement Type	Number of Occurrences	Total Cost (2026 dollars)
Replace Shelter	70	$1,435,000
Replace Bench	36	$90,000
Replace Trash Can	21	$52,500
Replace Bus Shelter Pad	269	$3,021,300
Replace/Install Sidewalk	1,686	$10,874,700
Replace/Install Landing Pad	2,977	$18,755,100
	Total	$34,249,100

Table 15 – Overall construction costs for improvements

Any bus stop that is not grade separated but is ADA compliant has been broken out and improvement costs have been given separately but this should not be considered a high priority. It has been assumed that any bus stop that is not grade separated and has an ADA criterion that is not compliant will be made grade separated during the when ADA compliance improvement is made.

	Number of Occurrences	Total Cost to be Made Grade Separated (2026 dollars)
Bus Stops that are Completely ADA Compliant but not Grade Separated*	159	$2,032,020

Table 16 – ADA compliant bus stops that are not grade separated costs

* Active bus stops only

According to the MCDOT, the current allocation of $2,000,000 (2026 dollars) per year for this project, would result in completion of ADA improvements in approximately 17 years.

Program Year	Funding*
Year 2026	$1 Million
Year 2027	$2.5 Million
Year 2028	$2.5 Million
Year 2029	$2.5 Million
Year 2030	$2.5 Million
Year 2031	$2.5 Million
Year 2032	$2.5 Million
Year 2033	$2.5 Million
Year 2034	$2.5 Million
Year 2035	$2.5 Million
Year 2036	$2.5 Million
Year 2037	$2.5 Million
Year 2038	$2.5 Million
Year 2039	$2.5 Million
Year 2040	$2.5 Million
Year 2041	$2.5 Million
Year 2042	$2.5 Million
Year 2043	$2.5 Million

Table 17 – 18 Year Funding Scenario

* All funding in 2026 dollars, 80% of the total funding directed to construction costs

13 Permits and Approvals

The only permits that RideOn would need to obtain from Montgomery County Department of Permitting Services (DPS) would be required if a bus shelter was to be constructed and powered by an external source. Sidewalk improvements not exceeding 5000 square feet are exempt from stormwater management requirements. RideOn has estimated this time frame to be 60 days. Any bus stop that is located along a MDOT SHA roadway will need a district-level utility permit, all these bus stops would get this permit from District 3. RideOn has given an estimate on a time frame for the timeframe to get a utility permit form SHA as 60 days. Determining right-of-way impacts were beyond the scope of this project, but RideOn has said that a 9-month time fame would be required to acquire any right-of-way.

14 Construction Phasing and Staffing Considerations

Construction phasing is subject to change, but is currently planned to occur as follows:

- Assume 350 bus stops can be upgraded (per year)
  - Concrete work (assume 3-4 days per stop)
  - Bus shelter work (assume 10 days per stop)
- Assume internal staffing (per year)
  - Take calls/log community complaints (assume 50 hours)
  - Investigate community complaints (assume 300 hours + assume 1 vehicle)
  - Interagency coordination (assume 50 hours)
  - Spot check bus stops (assume 500 bus stops per year, assume 1 hour per stop=500 hours)
  - Interagency coordination (assume 200 hours)
  - Manage Capital projects (assume 700 hours)
  - Maintain Database (assume 160 hours)
  - Review Adjacent projects (assume 50 projects per year, assume 2 hours per project=100 hours – this is to review projects that impact RideOn assets but are not RideOn projects)
  - Review Ridership Data (assume 80 hours)

15 Conclusion

Mongomery County is a diverse county with a mix of rural and urban, with mostly suburban communities. RideOn has built a vast network of over 80 bus lines serving over 5,400 over the past 20+ years. RideOn, as a public agency receiving federal funds, is required to provide an ADA accessible experience for all users at every bus stop. This audit has found that RideOn currently provides an ADA accessible experience at approximately half of its bus stops. The consultant team evaluated every bus stop throughout the RideOn system and has assigned an ADA pedestrian Access score and a Bus Shelter ADA score if a shelter was present. With these priority scores, RideOn can program the bus stops that are the most egregious to be upgraded first. The team also prepared and estimated costs to upgrade each current bus stop to be ADA compliant, if necessary, these can be found the cost estimate appendix. The team estimates that if 350 bus stops per year can be brought into ADA compliance, it would take approximately 10 years to reach full ADA compliance based on current regulations and current conditions with an estimated total cost of $34.2 million in 2026 dollars.

17 Appendix - Preliminary Cost Estimates

Replace ADA Compliant Bus Stop that is Not Grade Separated

Item Desciption	Quantity	Unit	Unit Price	Cost
5 INCH CONCRETE SIDEWALK	80	SF	$15.00	$1,200.00
STANDARD TYPE A COMBINATION CURB AND GUTTER 12 INCH GUTTER PAN 8 INCH MINIMUM DEPTH	13	LF	$60.00	$780.00
LANDSCAPING	1	LS	$300.00	$300.00
MAINTENANCE OF TRAFFIC	1	LS	$10,000.00	$10,000.00
MOBILIZATION	1	LS	$500.00	$500.00
			Total	**$12,780.00**

Assumptions

Unit prices based on July 2025 SHA Price index

Any bus stop that is not grade separated with at least 1 ADA criteria that fails will need to be grade seperated and completely replaced

5' wide sidewalk

8 linear feet of sidewalk

Maintenance of traffic will include signs, traffic control devices, etc.

Lansdaciping will include all grading and replanting

Bus landing pad is 5' x 8'

Replace/Install Bus Landing Pad

Item Description	Quantity	Unit	Unit Price	Cost
5 INCH CONCRETE SIDEWALK	40	SF	$15.00	$600.00
LANDSCAPING	1	LS	$200.00	$200.00
MOT	1	LS	$5,000.00	$5,000.00
MOBILIZATION	1	LS	$500.00	$500.00
			Total	**$6,300.00**

Assumptions

Unit prices based on July 2025 SHA Price index

Bus landing pad is 5' x 8'

Maintenance of traffic will include signs, traffic control devices, etc.

Landscaping will include all grading and replanting

Replace/Install Sidewalk

Item Desciption	Quantity	Unit	Unit Price	Cost
5 INCH CONCRETE SIDEWALK	50	SF	$15.00	$750.00
LANDSCAPING	1	LS	$200.00	$200.00
MAINTENANCE OF TRAFFIC	1	LS	$5,000.00	$5,000.00
MOBILIZATION	1	LS	$500.00	$500.00
			Total	**$6,450.00**

Assumptions

Unit prices based on July 2025 SHA Price index

5' wide sidewalk

10 linear feet of sidewalk

Maintenance of traffic will include signs, traffic control devices, etc.

Lansdaciping will include all grading and replanting

Replace Bus Shelter

Item Desciption	Quantity	Unit	Unit Price	Cost
BUS SHELTER	1	LS	$15,000.00	$15,000.00
MAINTENANCE OF TRAFFIC	1	LS	$5,000.00	$5,000.00
MOBILIZATION	1	LS	$500.00	$500.00
			Total	**$20,500.00**

Assumptions

Unit prices based on July 2025 SHA Price index

Maintenance of traffic will include signs, traffic control devices, etc.

No landscaping is required

Existing shelter electric supply can be re-used

The lump sum for the bus shelter includes all incidentals

Shelter bench can be re-used

Replace Bus Shelter Pad

Item Desciption	Quantity	Unit	Unit Price	Cost
10 INCH REINFORCED CONCRETE SIDEWALK	154	SF	$35.00	$5,390.00
LANDSCAPING	1	LS	$300.00	$300.00
MAINTENANCE OF TRAFFIC	1	LS	$5,000.00	$5,000.00
MOBILIZATION	1	LS	$500.00	$500.00
			Total	**$11,190.00**

Assumptions

Unit prices based on July 2025 SHA Price index

Maintenance of traffic will include signs, traffic control devices, etc.

Lansdaciping will include all grading and replanting

Bus shelter pad is 22'x7'

Existing shelter electric supply can be re-used

Shelter and bench can be re-used

Replace Bench

Item Desciption	Quantity	Unit	Unit Price	Cost
STEEL BENCH	1	LS	$2,000.00	$2,000.00
MOBILIZATION	1	LS	$500.00	$500.00
			Total	**$2,500.00**

Assumptions

Unit prices based on July 2025 SHA Price index

No maintenance of traffic is required

No landscaping is required

The lump sum for the bench includes all incidentals

Replace Trash Can

Item Desciption	Quantity	Unit	Unit Price	Cost
TRASH CAN	1	LS	$2,000.00	$2,000.00
MOBILIZATION	1	LS	$500.00	$500.00
			Total	**$2,500.00**

Assumptions

Unit prices based on July 2025 SHA Price index

There is an existing location to place trash can

No maintenance of traffic is required

No landscaping is required

The lump sum for the trash can includes all incidentals
