**Swap Tire Rubber for Shoe Rubber — But Be Safe!**

**FACT!** The average passenger vehicle traveling 40 MPH requires a minimum of 189 feet to come to a complete stop. When a vehicle collides with a pedestrian, the pedestrian is always the more seriously injured party, regardless of who may be at fault. There is little a pedestrian can do to improve a driver's habits... but there are steps one can take to be safer while walking:

- Be predictable. Cross or enter streets where it is legal to do so.
- Where no sidewalks are provided, it is usually safer to walk facing road traffic.
- Make it easy for drivers to see you — dress in light colors and wear reflective material.
- Most drivers are nice people, but don't count on them paying attention. Watch out — make eye contact to be sure they see you!
- Alcohol and drugs can impair your ability to walk safely, just like they do a person's ability to drive.
- Use extra caution when crossing multiple-lane, higher speed streets. Be alert—especially at “Right-turn-on-red” intersections.
- Follow the pedestrian signal, not the overhead traffic signal.
- Before crossing, stop at the curb and scan left, right and left again for traffic. Keep scanning for cars while you are crossing.

**Safe Cyclists Never Overlook the Basics**

1. The helmet should fit snug and flat on top of the head, not too far forward or backward.
2. The helmet straps should be snug but not too tight and should form a “V” under the ears.
3. Once the helmet straps are snapped together, there should be enough room to fit one finger between chin and strap.
4. Watch for shoelaces, pant legs, etc. that can get caught in your bike chain.
5. **REMEMBER**. Traffic laws apply to bicycles, too. Observe stop signs, traffic lights and other posted signs. Be sure to signal turns, lane changes and stops.

**Commuter’s Checklist:**
- Bright clothing
- Helmet
- Paddles
- Hydration
- Tools, pump, patch kit and 2 tubes

**Keep the Rubber-Side Down!**

- **Tires** - Look for rips or cuts, sidewall bulges, cracking or loss of tread. Replace if needed before tube is damaged.
- **Wheels** - Wheels should be securely fastened with quick release levers turned inwards toward the wheel. They lock by turning, not screwing shut. Wheels should spin without rubbing or wobbling.
- **Spokes** - Check for bends or breaks. Tighten loose spokes. Broken spokes may mean a bent rim needs to be replaced.
- **Chain** - Remove dirt and lubricate. Replace chains that have frozen links.
- **Gears and Crank set** - Replace gears that have worn or broken teeth. Make sure the cranks are tight by rocking from side to side — they should not move laterally.
- **Pedals** - Roughness indicates pedals need to be repacked with grease. Tighten loose pedals on crank arm.
- **Brakes** - Squeeze each brake lever to be sure it stops before touching the handlebar. Inspect brake pads. The forward part of the brake pads must strike the rim first to prevent squealing. If the pad surface is worn away, replace them.
- **Keep handlebars and saddle** fastened tightly.
- Frame should be free from cracks, bends and wrinkles.
- **Accessories and attachments** should be secure.

**BIKES RIDE FOR FREE**

Montgomery County Ride On, Metrobuses, and even the FDA White Oak Facility Shuttle are all equipped with bike racks! Each rack holds two bikes and supports most wheel and frame sizes— even kids’ bikes! Visit www.montgomerycountymd.gov/rideon for details.

Bikes are permitted on Metrorail at most times during the week (excluding rush hours and select dates) and all day Saturday and Sunday. Visit www.metrotransadoors.com for details.

**Why Bike?**

- **For Your Health** - Bicycling is one of the best forms of aerobic, low-impact exercise (approximately 375-600 calories burned per hour, depending on speed).
- **For Your Wallet** - Car ownership is expensive and consumes a major portion of many Americans’ income. AAA reports it costs over $5,000 per year to own and operate a car (compared to $120 per year to own and maintain a bicycle).
- **For your Schedule** - Combine your commute with your workout. Biking can get you there nearly as fast as driving for many local trips.
- **For the Environment** - The U.S. puts between 23 and 45% of its total energy (depending upon how one calculates this) into vehicles to make them, to run them, and to clear a right of way for them when they roll and park. Motor vehicles also create a substantial amount of pollution. Bicycles are as true a “no emissions” vehicle as there is.

**TELL YOUR BOSS!** Montgomery County Commuter Services provides free consulting services to employers to help them establish commuting benefits for their employees. Alternative commuting saves time and reduces expenses — all while being kind to the environment. Let the Montgomery County Commuter Services show you or your employees how to beat the traffic. Call (301) 770-POOL (7665) or visit www.montgomerycountymd.gov/commute. Or, stop by the Commuter Express Transit Store (located at #40) Colesville Road, Suite 150, 7 a.m. to 5 p.m. (M-F) for information, maps and schedules, or to no purchase transit passes and tokens. Their services are FREE!
Each of us has a destination. Some choose to walk or ride their bicycle to get there. Let’s share the road.

- Cyclists are considered vehicles and should be given the appropriate right of way.
- Recognize situations that may be potentially dangerous to pedestrians and cyclists and give them space.
- Cyclists may take the entire lane when hazards, road width or traffic speed dictate.
- Scan for pedestrians and cyclists in traffic, at intersections, and when opening doors.
- Leave at least three feet of space between your car and a cyclist when passing.
- Children walking or on bicycles are often unpredictable—expect the unexpected and slow down.
