

Olney Boys & Girls Club (OBGC)
2023 Field of Screams (FOS) and Winter City Lights (WCL)
Music Compliance Plan
Case # 20222605

OBGC proposes the following music control plan to control the music level at the receiving property line. The plan is intended to provide sound abatement so the level does not exceed 55 dBA during quiet hours.

The current decibel readings using the NIOSH Sound Level Meter App are under 50 dBA for the majority of the WCL music, there are approximately 3 music sequences that exceed 55 dBA for a few seconds.

All event speakers have been and are pointed away from the property line.

Step I - to be completed before the start of the 2023 FOS & WCL season

- 1) Lower the volume of amplified sound at 9PM.
- 2) Install sound abatement baffles immediately behind the speakers.

If needed, the following additional steps are available.

- Install earthen berm along the property line
- Install a privacy fence along the property line
- Plant evergreen trees and shrubs along the property line
