SAFETY

THE EFFECTS OF AGING ON DRIVING SKILLS
The mission of The USAA Educational Foundation is to help consumers make informed decisions by providing information on financial management, safety concerns and significant life events.

This publication is not medical, safety, legal, tax or investment advice. It is only a general overview of the subject presented. The USAA Educational Foundation, a nonprofit organization, does not provide professional services for financial, accounting or legal matters. Consult your tax and legal advisers regarding your specific situation. Information in this publication could be time sensitive and may be outdated.

The USAA Educational Foundation does not endorse or promote any commercial supplier, product or service. The Department of Defense, its military branches (Army, Marine Corps, Navy, Air Force and Coast Guard) and other governmental agencies do not endorse or favor any of the suppliers, information, products or services contained in this publication.

Understanding Changing Abilities 2
Assessing And Addressing Skills 4
Maintaining Good Driving Habits 6
What About Your Vehicle? 8
Planning Alternate Transportation 10
Knowing When To Stop Driving 11
As a group, older adults are among the safest on the road — wearing seatbelts, obeying the speed limit and avoiding drinking and driving more than other age groups. However, older adults are more likely to be injured or killed in a vehicle accident, no matter who is at fault.

Age And Safety
Safe driving requires the complex coordination of many skills. Although few individuals associate 40-year-old adults with aging, this is when subtle changes in vision, hearing, fitness and concentration can begin which may affect driving proficiency.

Every day for the next 18 years about 10,000 baby boomers will turn 65 years of age, according to the Pew Research Center. While age is not the only determinant of driving ability, research has shown that around the age of 65 drivers face an increased risk of being involved in a vehicle accident.

Pay Attention
By themselves, none of the following changes automatically indicate that an individual should stop driving. They do require paying more attention to driving safely, staying alert to changing capabilities and seeking the advice of a qualified physician. See “Maintaining Good Driving Habits” for information on how to address these changes.

### Weakening Vision

<table>
<thead>
<tr>
<th>With Age, Eyes:</th>
<th>This Can Cause:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recover from glare more slowly.</td>
<td>Temporary blind spots.</td>
</tr>
<tr>
<td>Have trouble focusing on nearby objects.</td>
<td>Difficulty focusing on a vehicle's instrument panel.</td>
</tr>
<tr>
<td>Have trouble transitioning between near and far objects.</td>
<td>Difficulty changing focus from the instrument panel to the road and back.</td>
</tr>
<tr>
<td>Need more light to see clearly, as pupil reaction time slows and the eye lens thickens.</td>
<td>Trouble seeing clearly at night and difficulty seeing low-contrast objects, such as pavement markings.</td>
</tr>
<tr>
<td>Become susceptible to age-related diseases such as cataracts, glaucoma and macular degeneration.</td>
<td>Sensitivity to light and glare and diminished peripheral and central vision.</td>
</tr>
</tbody>
</table>
DECREASING HEARING AND FITNESS

WITH AGE, YOU MAY: | THIS CAN CAUSE:
---|---
• Lose hearing acuity. | • Difficulty hearing sirens, horns and other warnings.
• Lose strength and flexibility in arms, legs, hips and shoulders. | • Difficulty turning the steering wheel, getting in and out of the vehicle and depressing pedals.
• Experience joint pain and inflammation, which affects manual dexterity. | • Difficulty using vehicle controls.
• Lose mobility in your neck and back. | • Inability to look over your shoulder to safely merge and change lanes.
• Become more prone to fatigue. | • Inability to drive longer distances.

DIMINISHED CONCENTRATION AND REACTION TIME

WITH AGE, YOUR BRAIN: | THIS CAN CAUSE:
---|---
• Processes signals and perceives sensory data more slowly. | • Difficulty complying with traffic signals and recognizing the actions of other vehicles.
• Becomes less able to focus on multiple tasks. | • Trouble driving in unfamiliar, congested areas.
• Needs more information to select options and make decisions. | • Delayed response to the demands of high speeds or heavy traffic.

Aggressive Driving

Increased traffic congestion can lead to stress, frustration and a lack of self-restraint. As a result, aggressive driving behavior has become an increasingly major threat to everyone on the road. While you may be unable to avoid a traffic jam or a hostile driver, you can learn how to best react to the dangers of aggressive driving. For more information on preventing aggressive driving, see “Resources” on the inside back cover of this publication to order a free copy of The USAA Educational Foundation publication, Safe On The Road.
Stay Alert To Changes
It is never too late to begin maintaining and improving your current physical and mental skills. Use the following chart to evaluate whether your fitness, concentration, vision and hearing are adequate for safe driving.

### DRIVING SKILLS ASSESSMENT

<table>
<thead>
<tr>
<th><strong>FITNESS</strong></th>
<th>YES</th>
<th>SOMETIMES</th>
<th>NO</th>

<td>🗼</td>
<td>🗼胚</td>
<td>🗼胚</td>
</tr>
</tbody>
</table>

If you answered “Yes” to any of these questions, see “Maintaining Good Driving Habits” for more information.
To some extent, you can maintain physical abilities by eating well and exercising regularly.

The following suggestions can help you keep your fitness, concentration, reaction, vision and hearing as sharp as possible on and off the road. While following these suggestions may be beneficial, they do not ensure driving fitness.

**Fitness**

- Schedule regular physical exams.
- With physician approval, begin a regular exercise program.
- Consult a physician immediately if you have pain or swelling in your feet or pain or stiffness in your arms, legs or neck.

**Concentration And Reaction**

- Consult a physician if you experience memory loss.
- Plan your route before you begin driving.
- Drive familiar roads whenever possible.
- Watch traffic patterns and conditions and avoid driving during heavy traffic or adverse weather conditions.
- Avoid driving when taking over-the-counter or prescription medications that cause drowsiness, decrease energy or slow reaction times. Avoid driving for 1 to 2 days when taking any new medication, to ensure you do not have an adverse reaction.

**Vision And Hearing**

- Visit your eye health care provider at least annually, or immediately if you experience sudden vision loss, eye pain or irritation.
- See your eye health care provider annually if you are 60 years of age or older to check for cataracts, glaucoma, macular degeneration, diabetic retinopathy and other age-related conditions. Most eye diseases can be treated effectively when detected early.
- Wear corrective lenses at all times, as appropriate. Keep them clean. If glasses are lost or broken, do not rely on an old pair. Replace them immediately with your newest prescription. Avoid eyewear with side pieces that may block your vision.
• Avoid driving at dawn, dusk and night. If you must drive, do not wear sunglasses or tinted lenses during these times. Consider wearing polarized (yellow-tinted) lenses on gray days and at dusk and dawn.

• Consider wearing polarized (amber-tinted) lenses on bright, sunny days.

• Do not darken or tint your vehicle windows.

• Keep your windshield, mirrors and headlights clean and make sure the headlight aim is checked when your vehicle is inspected.

• Increase illumination on your vehicle’s instrument panel.

• Adjust your seat height so that you can see 10 feet of the road in front of your vehicle. This reduces nighttime glare from oncoming headlights. Also, look to the lower right side of the road when there is oncoming traffic.

• Eliminate your driver’s side blind spot by adjusting your side mirror. First, lean your head against the driver’s side window. Then move your mirror outward so that when you look at the inside edge, you can barely see the side of your vehicle. If you use a wide-angle mirror, practice judging distances to other vehicles.

• Use the dimming feature on the rear-view mirror to avoid headlight glare from behind.

• Be alert to sounds outside your vehicle if hearing is limited. Limit passenger conversation and background noises from the radio. If you wear a hearing aid, avoid driving with open windows. Wind noise can impair the hearing aid’s effectiveness.

**Drive Sensibly**

• **Avoid distractions.** Stay focused on the road. Do not talk on the phone, read or send texts, daydream, sightsee, eat, drink, smoke, apply makeup, adjust the radio, or reach for something on the floor when operating your vehicle.

• **Yield to other drivers.** Remain on the defensive and assume other drivers have the right of way in all situations.

• **Use caution at intersections.** Be extra careful when entering and leaving intersections. Keep your vehicle’s wheels pointed straight ahead when waiting to turn left to avoid being pushed into oncoming traffic if you are hit from behind.

• **Check your blind spots.** Never rely on rearview and sideview mirrors alone. Turn your head and check blind spots before changing lanes.

• **Keep your distance.** Do not follow other vehicles too closely.
Maintain Your Vehicle
Staying safe on the road requires a dependable and responsive vehicle as well as an able driver. Regularly check your vehicle’s tires, brakes, steering, directional signals, brake lights and windshield wipers or ask a professional mechanic to do so. Do not wait for your annual vehicle inspection to make sure your vehicle is working properly.

### ADAPTIVE DEVICES FOR YOUR VEHICLE

If necessary, the following adaptive devices can help you gain more visibility and control when driving:

- Seat and back cushions for improved visibility.
- Visor extenders to reduce glare.
- Pedal extenders for better control of gas and brake pedals.
- Steering wheel covers, or steering devices, to improve your grip and ability to turn.
- Corrective mirrors to help eliminate blind spots.

For more information about these devices and their appropriate use, consult an occupational therapist or a driving rehabilitation specialist. You can also visit the following websites:

- The American Occupational Therapy Association, Inc. 
  www.aota.org
- The Association for Driver Rehabilitation Specialists (ADED) 
  www.driver-ed.org
Choose A Safer Vehicle
When purchasing a vehicle, check the safety ratings — crash tests, experience ratings and rollover ratings — as well as safety features that can help provide you more control and comfort, including:

- Access to vehicle controls, including gas and brake pedals.
- Airbags.*
- Antilock brake systems and stability tracking systems.
- Anti-skid control.
- Height-adjustable seats for good visibility. You should be able to see at least 3 inches over the top of the steering wheel.
- Legible instrument panel.
- Large, glare-proof mirrors.
- Electric or mechanical pedal extenders.
- Power steering, windows and door locks.
- Properly adjusted headrests, located against the back of your head.
- Properly fitted restraints.
- Tilt and telescoping steering wheel.
- Turn signals on mirrors.

*When used in conjunction with safety belts, air bags provide the best protection available in a vehicle crash. However, serious air bag injury can occur when drivers are positioned too closely to the steering wheel. Always buckle up and sit at least 10 inches from the steering wheel.

For more information on vehicle safety visit the Insurance Institute for Highway Safety (IIHS) at www.ihs.org and the National Highway Traffic Safety Administration (NHTSA) at www.safercar.gov.
Even if you currently drive safely, it is wise to prepare for limiting or stopping driving in the future. Take time to learn about transportation options available in your community. After researching these services, you may find them to be more convenient than driving and parking your own vehicle.

When calculating the cost of alternate transportation, consider the savings of reducing or eliminating the expense of owning, maintaining, insuring and parking your vehicle. Also, check with your local branch of the National Association of Area Agencies on Aging (n4a). These agencies plan, coordinate and offer services that help make independent living an option for older adults. Your local branch of the n4a may support taxi cab voucher or other programs that can reduce your transportation costs. For more information, visit www.n4a.org.

**City Buses, Trams And Subway Systems**

Using public transportation systems for the first time can be intimidating, but public transit departments are willing to teach consumers about their services.

- Ask about schedules, routes, bus stops and safety.
- Recruit friends to help you interpret timetables and maps. Ask them to accompany you as you try routes.
- Request a house call training session if you are part of a large group.

**Taxi Cabs And Personalized Driver Services**

These services are available in larger metropolitan areas and are useful when you live in suburban areas where public transportation is less available.

- Learn how these services assess rates and fees.
- Determine the cost of transportation to and from places you frequent.
- Take several short trips to see how you like the service.
- Request a house call training session if you are part of a large group.

**Shuttle Buses**

Many churches, senior centers, retirement communities and municipalities offer shuttle bus services for their members and seniors.

- Become familiar with the pick-up and drop-off points and hours of operation for these services.
- Determine the costs and take several trial runs if possible.
- Ask whether transportation is available at night and on weekends or holidays.
Knowing When to Stop Driving

Many adults make appropriate adjustments for changing capabilities and maintain safe driving habits well into their 80s. However, driving skills inevitably deteriorate with age. You may eventually need to stop driving.

If you wonder whether that time is approaching, reflect on recent driving experiences, making every effort to be honest about your abilities and possible limitations.

Check the following statements that apply to you:

<table>
<thead>
<tr>
<th>Statement</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>I have trouble seeing over the dashboard.</td>
<td></td>
</tr>
<tr>
<td>I have trouble recognizing or observing traffic signs and signals.</td>
<td></td>
</tr>
<tr>
<td>I have trouble moving my foot from the gas pedal to the brake pedal.</td>
<td></td>
</tr>
<tr>
<td>I have trouble turning to look over my shoulder.</td>
<td></td>
</tr>
<tr>
<td>Sometimes other vehicles seem to “come out of nowhere” and surprise me.</td>
<td></td>
</tr>
<tr>
<td>It is difficult to judge gaps between vehicles when merging with oncoming traffic.</td>
<td></td>
</tr>
<tr>
<td>It is difficult to judge gaps between oncoming vehicles when making a left turn.</td>
<td></td>
</tr>
<tr>
<td>Other drivers honk at me.</td>
<td></td>
</tr>
<tr>
<td>I sometimes feel overwhelmed by the signs, signals, pedestrians and other vehicles I must be aware of when driving.</td>
<td></td>
</tr>
<tr>
<td>I sometimes forget how to drive to familiar places.</td>
<td></td>
</tr>
<tr>
<td>I have been getting lost more frequently.</td>
<td></td>
</tr>
</tbody>
</table>

If you checked any of the above items, it may be time for you to limit or stop driving.
What You Can Do
With a family member’s help, seek a professional evaluation of your driving skills. If possible, look for a safe driving course offered by an adult education program, local rehabilitation center or the American Association of Retired Persons (AARP).

If a driving test is scheduled with a public testing center such as the Department of Motor Vehicles (DMV), you should prepare for the consequences that could occur if you fail the test. Your license could be revoked immediately, so you will need to have alternate transportation plans in place.

Driving Well
Driving well requires the complex coordination of many physical and mental skills. It requires experience, ongoing training, good judgement and the ability to respond quickly and decisively to changing conditions. When you understand the changes that accompany aging and take steps to address these changes, you can maintain your ability to drive safely — and enjoy the independence and freedom it provides.
