Subject: FW: Solar for agribusiness

Hello David and John,
I thought the MSCD, APAB and AAC should know about the message below to learn more about solar uses on farms.
The MNCPPC Zoning Rewrite Process proposes a new use in the Zoning Code Solar Collection Systems that will provide a more defined process for permitting.
You may want to schedule some time to meet with this guy to understand the services provided.
Please let me know if you have any questions.
Thanks J

Subject: **Solar for agribusiness**

Woody,

I am reaching out to organizations and individuals involved in Maryland agriculture to discuss opportunities for using solar energy. Agribusiness' have a unique opportunity to

not only take advantage of great State and Federal tax incentives, but in addition the USDA offers 30% grants for renewable energy. These incentives and grants make farms and the farming industry one of the best investment sectors for solar to significantly lower the cost of electric. Let me know if I can answer any questions or provide a free site assessment for solar on farmland, barns and the roofs of agriculture related business'.

Also, I often meet with several agriculture organizations to speak at their meetings and inform them of the benefits and cost of solar. If you have a good forum where that may be beneficial, let me know.

Best Regards,

Blue Crump
