

M E M O R A N D U M

March 27, 2023

TO: Transportation and Environment Committee

FROM: Ludeen McCartney-Green, Legislative Attorney

SUBJECT: **Worksession** – Committee to make a recommendation

Expected Attendees

David Anspacher, Montgomery County Planning Department
Eli Glazier, Planner III, Montgomery County Planning Department
Jason Sartori, Chief, Montgomery County Planning Department
Chris Conklin, Director, Department of Transportation (Invited)
Wade Holland, Vision Zero Coordinator, Department of Transportation (Invited)

Bill 11-23, Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan, also known as, The Safe Streets Act of 2023, sponsored by Lead Sponsor Council President Glass with Co-Sponsors Councilmembers Luedtke, Stewart, Katz, Fani-González, Council Vice-President Friedson, and Councilmembers Jawando, Balcombe, Albornoz, Mink, and Sayles is scheduled to be introduced on February 28, 2023. A public hearing was held on March 21, 2023, at 1:30 p.m. A Transportation and Environment Committee is scheduled for March 30, 2023.

Bill 11-23 would:

- (1) require an infrastructure review for pedestrian-related collisions within a County's school zone;
- (2) prohibit a driver of a motor vehicle from making a right turn on a red at certain intersections;
- (3) require certain traffic control devices at crosswalks in the County's downtown and town center areas;
- (4) require the County Executive to provide an automated traffic enforcement plan; and
- (5) generally amend the law regarding motor vehicles and traffic control.

PURPOSE

The purpose of this bill is to advance the County's Vision Zero goals by eliminating serious and fatal crashes through the means of addressing specific transportation initiatives, including prioritizing student safety in school zones, providing more access for pedestrians in a crosswalk, prohibiting a right turn on red, and requiring a plan for increased automated traffic enforcement.

BACKGROUND

In 2016, the Council adopted Vision Zero to make road safety a top priority in Montgomery County.¹ As outlined in the Vision Zero action plan describes, “using data-informed and equitable approaches, Montgomery County will systematically update the roadway network to create complete, safe streets and build a culture of safety through purposeful campaigns and engagement to eliminate serious and fatal collisions by 2030.”² Since then, even though, the County has made advancements in safety for pedestrians and cyclists, residents in our equity-emphasis areas are still more likely to experience an injury or fatality on our roads. Since 2015, 64% of all pedestrian-involved crashes occurred at intersections. For bicyclists, 74% of all incidents occurred at intersections. Since 2020, there have been 41 pedestrians and bicyclists killed by motorists, and over 1,400 have been injured. In 2022 alone, 19 non-motorists died and 574 were hit.

The neighboring jurisdiction, Washington D.C. has also adopted a Vision Zero program, which set the goal that, by 2024, it will “reach zero fatalities and serious injuries to travelers of its transportation system through more effective use of data, education, enforcement, and engineering.” The District passed its Vision Zero Enhancement Omnibus Amendment Act of 2019, back in September of 2020, to address right turns on red in some locations; however, the legislation remains unfunded, and therefore not in effect.

State v. Local Authority

The Maryland Vehicle Law³ expressly preempts local regulation on any subject that is within the Maryland Vehicle Law, *See Transp.* § 25-101.1. However, there are exceptions to the preemption. Transp. § 25-102(a) states that the Maryland Vehicle Law “do[es] not prevent a local authority, in the reasonable exercise of its police power, from exercising [certain enumerated] powers as to highways under its jurisdiction. One of those powers is “...regulating the traffic by [...] traffic control devices; [or] regulating or prohibiting the turning of vehicles or specified types of vehicles at intersections [...]” Transp. § 25-102(a)(2) and (9). As a result, the County has the authority to legislate within this scope.

BILL SPECIFICS

Traffic Infrastructure Review

Bill 11-23 would require that an infrastructure review must be performed if a student going to or from school is involved in a collision within a County’s school zone. An infrastructure review is a study of several factors that led to the collision and recommendations for traffic improvements, specifically, the review must include the following:

Lines 22-27:

(1) any deficiencies in engineering, traffic control, and traffic operations; and

¹ [Resolution 18-390](#), Resolution to adopt Vision Zero in Montgomery County and urge the State of Maryland to also adopt Vision Zero. Adopted February 2, 2016.

² [Vision Zero 2030 Action Plan](#)

³ The Maryland Vehicle Law is found in Titles 11 through 27 of the Transportation Article, Md. Code Ann., Transp. § 11-206.

- (2) appropriate corrective actions and crash reduction countermeasures that are consistent with the United States Department of Transportation's best practices and the County's Vision Zero program.

No Right Turn On Red

Further, the Bill would require Montgomery County's Department of Transportation to post signs marked, "No Right Turn On Red" at the intersection of a County road in downtown and town center areas. A downtown or town center area is defined under recently adopted, [Bill 24-22, Streets and Roads](#), and corrective [Bill 34-22, Streets and Roads – Classifications of Roads](#), to be codified in Sections 49-31 of the County Code after 91 days of bill enactment.⁴ A driver of a motor vehicle would be prohibited from making a right turn on red in those specific locations.

Leading Pedestrian Interval

A leading pedestrian interval (LPI) is a traffic control device that, "gives pedestrians the opportunity to enter the crosswalk at an intersection 3-7 seconds before vehicles are given a green indication. Pedestrians can better establish their presence in the crosswalk before vehicles have priority to turn right or left."⁵ The bill requires LPIs in downtown and town center areas.

Lines 76-80 of the Bill:

Leading pedestrian interval – required. The Director must install or cause to be installed a leading pedestrian interval at every crosswalk of a County road located:

- (1) in a downtown area; and
- (2) in a town center area.

Automated Traffic Enforcement Plan

Lastly, Bill 11-23 would require the County Executive to provide an automated traffic enforcement plan. See, lines 82 -100 of the Bill. (©6).

PUBLIC HEARING

Wade Holland, Vision Zero Coordinator, MCDOT, representing the Executive, supported the Bill, with amendments to expand the Department's discretion for waiver of "No Right Turn on Red" and LPI at certain intersections (©61). Eli Glazier, representing the Montgomery County Planning Board, submitted written testimony supporting the Bill, along with suggested

⁴ Bill 24-22 was enacted by the Council on 10/25/2022 and Bill 34-22 was enacted by the Council on 12/13/2022. A bill enacted becomes effective 91 days after the County Executive signs the bill. The text of the law will not be available online for the public to review until after 91 days.

⁵ U.S. Department of Transportation Federal Highway Administration. Leading Pedestrian Interval., <https://highways.dot.gov/safety/proven-safety-countermeasures/leading-pedestrian-interval>.

amendments for Council’s consideration (©64). Marilyn Berger, Warren Chen, and Jaime Herr provided testimony in support (©50,62,47).

Several additional testimonies include support with amendments, amendments include expanding the scope for a traffic infrastructure review to occur for any pedestrian for all school-related crashes. See testimonies of the Washington Area Bicyclists Association (©59), Montgomery County Families for Safe Streets (©45), Action Committee for Transit (©53), and Locust Hill Citizens’ Association (©56). Amendments to expand LPI implementation at other intersections, supported by testimony provided by Michael Larkin (©51).

Jared Hautamaki, an individual, written testimony expressed opposition to the prohibition of no right turn on red because it would increase traffic dwell times, increase carbon emissions, and increase vehicle travel time. Mr. Hautamaki’s opposition to the traffic enforcement devices and made recommendations for amendments, see page at ©49.

SUMMARY OF IMPACT STATEMENTS

CLIMATE ASSESSMENT STATEMENT: The Office of Legislative Oversight (OLO) anticipates Bill 11-23 could have a positive impact contribution to addressing climate change [...] to encourage safer streets for all users, which can encourage more active transportation (i.e., walking, cycling) and lead to less dependency on automobiles. This lowered dependence could have a co-benefit of lowered greenhouse gas emissions associated with transportation and enhanced community resilience. However, the significance of this impact is indeterminate. ©7

ECONOMIC IMPACT STATEMENT: According to OLO, Bill 11-23 would have an overall positive impact on economic conditions in the County. OLO expects the Bill to induce pedestrian and bicycle infrastructure development in certain downtown and town center areas in the County that otherwise would not occur in the absence of the policy change. Businesses contracted to carry out this development likely would experience increased business income. ©13

FISCAL IMPACT STATEMENT (FIS): The Council has not yet received the FIS. The Office of Management and Budget (OMB) requested an extension to transmit the fiscal impact statement to the Council no later than March 30, 2023. ©18

RACIAL EQUITY AND SOCIAL JUSTICE IMPACT (RESJ): The Council has not yet received the RESJ impact statement.

ISSUES FOR COMMITTEE’S DISCUSSION

Council staff received several amendments from individuals through public testimonies, Councilmember Friedson (©19), the County Executive (©21), and the Montgomery County Planning Board (©64). Council staff has indicated where applicable amendments raised by

1. **Should the Committee expand and clarify the scope of the traffic infrastructure review?**
 - a. **Applicability to any pedestrian-related collision within the school zone or within a specific timeframe.**

(Amendment suggested by Councilmember Friedson, Executive Branch, Planning Board, and various public testimony)

Bill 11-23, as introduced, requires a traffic infrastructure review within a school zone for a collision that involves a student traveling to or from school. The Council received several public testimonies, including from the Planning Board, to expand the scope of the Bill to apply to any pedestrian involved, not only a student. A Planning representative testified, "...in the proactive spirit of Vision Zero and acknowledging the wider school community who travel through these areas, the Board recommends language limiting the applicability of the traffic infrastructure reviews to those crashes that include students be removed from the legislation." (©64)

Councilmember Friedson's memo also indicates support for the same to expand the scope of the traffic infrastructure review.

The executive branch suggested an amendment to clarify the timeframe is within 30 minutes before and after the dismissal bell. (©24)

Amend lines 12-19, as follows:

Traffic infrastructure review within a school zone - required. The Department of Transportation must coordinate with the Montgomery County Public Schools to conduct a traffic infrastructure review of each pedestrian collision that:

- (1) occurs on a County road; and
- (2) [[involves a student going to or from school; and
- (3)]] occurs in a designated school zone or on school property within 30 minutes of
[[during]] arrival or dismissal times on a school day.

1a. Decision Point: Whether to adopt an amendment to expand the scope of infrastructure review of any pedestrian and not just a student within a school zone; remove whether the provision a student is going to or from school; and clarify within 30 minutes of arrival or dismissal?

b. Expand infrastructure review apply to collisions within 100 feet of school bus stops. *(Proposed by Councilmember Friedson)*

As cited in Councilmember Friedson's memo, an amendment may be proposed, "to broaden the scope of the infrastructure review requirement such that it applies to all collisions in school zones regardless of whether the collision was student-involved or occurred during arrival and dismissal times. Furthermore, **the infrastructure review requirement should apply to all collisions within 100 feet of school bus stops.**" (©19-20)

1b. Decision Point: Whether to expand the scope of review to collisions within 100 feet of school bus stops?

c. Clarifying the role of MCDOT and Montgomery County Public Schools

Council staff suggests the TE Committee amend the provision in line 12 by removing the language “coordinate” and replacing it with “consult” because this would clarify the intent of the Bill and the role of MCDOT, in conjunction with, Montgomery County Public Schools (MCPS). MCPS is governed by state law and not subject to local law, and unless state law requires coordination after a collision within a school zone the requirement to coordinate is ineffective; however, in the alternative, the term “consult” strengthens the provision and is more effective. The following recommended amendment is suggested by Council staff:

Amend lines 12-19, as follows:

Traffic infrastructure review within a school zone - required. The Department of Transportation must [[coordinate]] consult with the Montgomery County Public Schools to conduct a traffic infrastructure review of each pedestrian collision that:

However, the Executive Branch suggests the TE committee amend the Bill to shift the burden on upon notification by law enforcement, the MCDOT would be required to conduct a traffic infrastructure review, therefore, removing coordination with MCPS. Reasons provided in the Executive branch memo state, “This additional provision would alert the proper authority to the crash and that authority believes is warranted.” ©22

Traffic infrastructure review within a school zone - required. Upon notification of a collision involving a student walking, biking, or using other non-motorized conveyances to or from school by law enforcement. The Department of Transportation must [[coordinate with the Montgomery County Public Schools to]] conduct a [[traffic infrastructure review]] of each collision that:

1c. Decision Point: Whether to clarify the role of MCDOT after a traffic collision?

2. Amendments related to Leading Pedestrian Interval (LPI)

- a. Clarify and expand LPIs that are county-controlled signalized intersections to apply within a school, park, rail, bus rapid transit, or community center.**
(Amendment suggested by Planning Board and Councilmember Friedson).

The Committee may amend lines 69-72 and 76-80, as follows:

- (c) Signage - required. The Department must erect signage that indicates “No Right Turn on Red” at the intersection of [[a]] County-controlled signalized intersections [[road]] located: (1) in a downtown area; and (2) in a town center area.

* * *

(e) *Leading pedestrian interval – required.* The Director must install or cause to be installed a leading pedestrian interval at every crosswalk of [[a]] County-controlled signalized intersections [[road]] located: (1) in a downtown area; and (2) in a town center area; and (3) within one block of a school, park, rail or bus rapid transit stations, or community center frontage.

b. Amend the language to require the County Executive to provide a plan within a certain timeframe to implement “No Right Turn on Red” or “Leading Pedestrian Intervals” (*Amendment suggested by the Executive Branch*)

The Executive branch memo suggests that it would provide a plan, within 270 days after Bill 11-23 becomes effective, that includes a cost estimate for the expansion of “No Right Turn on Red” and “Leading pedestrian intervals” to be included downtown and town center areas and other areas with moderate to high pedestrian volumes such as near schools and parks. As cited in the memo, “This would allow MCDOT to review areas where these treatments are most needed, prioritize the roll-out, provide transparency in the roll-out, and partner with the State Highway Administration to potentially change more signals than required under the bill as introduced.” ©23

See Executive Branch’s Amendment on Page ©27.

Decision Point: Whether to accept amendments as proposed by Councilmember Friedson and the Planning Board or amendments to adopt the requirement of a plan for implementation as suggested by the Executive Branch?

3. Should the Bill provide MCDOT with discretion and flexibility to implement traffic control and devices? (*Amendment suggested by Planning Board*)

Public testimony provided on behalf of the County Executive and the Planning Board recommends that the legislation should enable MCDOT to use its discretion on a case-by-case basis to determine for each intersection, whether: 1) it should it implement a no-right turn on a red or install LPI or would it be counterproductive, or 2) there are alternative safety treatments that may be better for the intersection. *See* testimonies at ©61 and ©64.

The Committee may amend Bill 16-23, as follows:

(f) *Exemption by the Department.* The requirements of subsection (c) or (e) do not apply at an intersection if the Director of the Department of Transportation determines it would significantly impair public safety.

(g) *Annual Reporting.* By July 1 of each year, after the effective date of this Act, the Director must transmit to Council a report that includes, a rationale or evaluation, for any intersection where the Director determined, under subsection (f), the installation of “No Turn on Red” signage or a leading pedestrian interval should

not apply. The report must be updated and resubmitted to the Council annually to account for any changes in circumstances or recommendations by the Department.

Decision Point: Whether the Committee would amend the Bill to provide MCDOT with discretion to implement traffic control and devices?

4. Amendments to automated enforcement action plan to comply with state law

State law authorizes the County to use automated monitoring systems (cameras) for enforcement, including traffic control system monitoring systems, speed monitoring systems, and school bus monitoring systems; however, stop signs monitoring systems have not been authorized by state law and recent state enabling legislation failed to pass this session.⁶ Council staff suggest the TE Committee amend the automated enforcement plan, with the following:

Amend lines 84 – 85, as follows:

- (a) The County Executive, or the Executive's designee, must transmit to the Council an automated enforcement action plan that includes an explanation of the plan, the goals, and the strategies to increase automated enforcement cameras, if camera use is authorized by state and local law:
 - (1) at red traffic lights;
 - (2) at stop signs; or
 - (3) at speed monitoring devices;

Decision Point: Whether to adopt the amendment to comply with camera use, as authorized by state and local law.

5. Additional amendments were proposed by the Executive branch.

- a. **Include holistic recommendations including changes to education and outreach.**

Amend lines 26-27, as follows:

- (f) Contents of the traffic infrastructure review. The review under subsection (e) must identify:
 - (1) any deficiencies in engineering, traffic control, and traffic operations;
 - and

⁶ House Bill 367, Vehicle Laws – Stop Sign Monitoring Systems – Authorization
<https://mgaleg.maryland.gov/mgaweb/Legislation/Details/HB0367>

- (2) appropriate corrective actions and crash reduction countermeasures, including a redesign of the road network and changes to safety-related outreach, that are consistent with the United States Department of Transportation's best practices and the County's Vision Zero program, if warranted.

- b. Amend the language to clarify that the six-month clock starts upon notification of a crash to the Department of Transportation by the relevant law enforcement agency.**

Amend lines 29 -30, as follows:

The Department of Transportation must:

- (1) complete the traffic infrastructure review within 6 months after notification by law enforcement that an injury or fatality has occurred on a County maintained roadway; and
- (2) post the contents of the review on the County's website.

Decision Point: Whether to accept the amendments proposed by the Executive branch, as stated above in 5a. and 5b.?

Next Steps: Whether the TE Committee recommends Bill 16-23, as recommended, for action before the full Council?

COUNTY COUNCIL FOR MONTGOMERY COUNTY, MARYLAND

Lead Sponsor: Council President Glass
Co-Sponsors: Councilmembers Luedtke, Stewart, Katz, Fani-González, and Council Vice-President
Friedson, and Councilmembers Jawando, Balcombe, Mink, and Sayles

AN ACT to:

- (1) require an infrastructure review for pedestrian-related collisions within a County's school zone;
- (2) prohibit a driver of a motor vehicle from making a right turn on a red at certain intersections;
- (3) require certain traffic control devices at crosswalks in the County's downtown and town center areas;
- (4) require the County Executive to provide an automated traffic enforcement plan; and
- (5) generally amend the law regarding motor vehicles and traffic control.

By amending

Montgomery County Code
Chapter 31, Motor Vehicles and Traffic
Section 31-9A

By adding

Montgomery County Code
Chapter 31, Motor Vehicles and Traffic
Sections 31-9C and 31-9D

Boldface	<i>Heading or defined term.</i>
<u>Underlining</u>	<i>Added to existing law by original bill.</i>
[Single boldface brackets]	<i>Deleted from existing law by original bill.</i>
<u>Double underlining</u>	<i>Added by amendment.</i>
[[Double boldface brackets]]	<i>Deleted from existing law or the bill by amendment.</i>
* * *	<i>Existing law unaffected by bill.</i>

The County Council for Montgomery County, Maryland approves the following Act:

Sec. 1. Short Title.

This Act may be cited as “The Safe Streets Act of 2023.”

Sec. 2. Sections 31-9A is amended and 31-9C and 31-9D are added as follows:

31-9A. Speed Monitoring Systems Authorized; traffic infrastructure review.

(a) *Definitions.* In this Section, the following words have the meanings indicated:

School zone means an area within a half-mile radius of any school established by the State Highway Administration or the County pursuant to the Maryland Transportation Code § 21-803.1.

* * *

(e) Traffic infrastructure review within a school zone - required. The Department of Transportation must coordinate with the Montgomery County Public Schools to conduct a traffic infrastructure review of each collision that:

- (1) occurs on a County road;
- (2) involves a student going to or from school; and
- (3) occurs in a designated school zone or on school property during arrival or dismissal times.

(f) Contents of the traffic infrastructure review. The review under subsection (e) must identify:

- (1) any deficiencies in engineering, traffic control, and traffic operations; and
- (2) appropriate corrective actions and crash reduction countermeasures that are consistent with the United States Department of Transportation’s best practices and the County’s Vision Zero program.

(g) The Department of Transportation must:

- (1) complete the traffic infrastructure review within 6 months after an injury or fatality has occurred; and
- (2) post the contents of the review on the County's website.

31-9C. Traffic Control Signals and Devices.

(a) Legislative findings. The County Council finds and declares that:

- (1) In 2016, the Montgomery County Council passed Resolution No. 18-390 supporting Vision Zero and the policies and investments necessary to achieve it by 2030. Vision Zero is a strategy to eliminate all traffic fatalities and severe injuries while increasing safe, healthy, and equitable mobility for all.
- (2) Progress has been made to reduce injuries and deaths on our roadways due to more sidewalk installations, dedicated bike lanes, automated traffic enforcement, and other traffic calming techniques that decrease safety risks for non-motorists and motorists alike. While we have made advancements in our safety investments for pedestrians and cyclists in the County, residents in our equity-emphasis areas are still more likely to experience an injury or fatality on our roads.
- (3) Since 2020, 41 pedestrians and bicyclists have been killed by motorists, and over 1,400 have been injured. In 2022 alone, 19 non-motorists died and 574 were hit.
- (4) Since 2015, 64% of all pedestrian-involved crashes occurred at intersections. For bicyclists, 74% of all incidents occurred at intersections.
- (5) Ensuring the health and safety of 1.1 million residents will continue to be a top priority for the Montgomery County

government. By implementing evidence-based measures and maximizing resources to areas in critical need, more lives can be saved.

(b) Definitions. As used in this Section:

Department means the Department of Transportation.

Director means the Director of Transportation or the Director's designee.

Downtown area has the same meaning as stated in Section 49-31.

Leading pedestrian interval means a traffic control device that:

(1) allows a pedestrian to establish a presence in the crosswalk before vehicles are given a green indication; and

(2) has specifications in accordance with the most recent edition of the Manual on Uniform Traffic Control Devices for Highways and Streets.

Town center area has the same meaning as stated in Section 49-31.

(c) Signage - required. The Department must erect signage that indicates "No Right Turn on Red" at the intersection of a County road located:

(1) in a downtown area; and

(2) in a town center area.

(d) Right turn on red – prohibited. A driver of a motor vehicle must not make a right turn on a red signal as marked by a posted sign under subsection (c).

(e) Leading pedestrian interval – required. The Director must install or cause to be installed a leading pedestrian interval at every crosswalk of a County road located:

(1) in a downtown area; and

(2) in a town center area.

31-9D. Automated Enforcement Action Plan.

(a) The County Executive, or the Executive's designee, must transmit to the Council an automated enforcement action plan that includes:

(1) an explanation of the plan, the goals, and the strategies to increase automated enforcement cameras:

(A) at red traffic lights;

(B) stop signs; and

(C) speed monitoring devices;

(2) a recommended number of automated enforcement cameras, by camera type, that should be deployed in the County to achieve appropriate levels of enforcement and related traffic safety results;

(3) a timeline for deploying the recommended number of cameras, including the number of additional cameras to be deployed, by camera type and by fiscal year;

(4) the amount of funding necessary, in addition to what has been authorized as of the date of the plan's publication, by fiscal year, to attain the target number of cameras; and

(5) any other necessary recommendations for consideration.

(b) Annual plan. The plan must be updated and resubmitted to the Council annually.

Sec. 3. Transition; effective date.

The County Executive must provide an automated enforcement action plan as required under Section 31-9D within 180 days after the enactment of this Act. Sections 31-9A and 31-9C, as added by Section 2 of this Act, take effect on July 1, 2025.

Climate Assessment

Office of Legislative Oversight

Bill 11-23: Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan

SUMMARY

The Office of Legislative Oversight (OLO) anticipates Bill 11-23 could have a positive impact on the County's contribution to addressing climate change as the provisions of the Bill are intended to encourage safer streets for all users, which can encourage more active transportation (i.e., walking, cycling) and lead to less dependence on automobiles. This lowered dependence could have a co-benefit of lowered greenhouse gas emissions associated with transportation and enhanced community resilience. However, the significance of this impact is indeterminate.

BACKGROUND AND PURPOSE OF BILL 11-23

Vision Zero is a strategy to ultimately eliminate all traffic fatalities and severe injuries, while increasing safe, healthy, and equitable mobility for all. Since its inception in Europe in the 1990s, a growing number of jurisdictions in the United States have adopted Vision Zero action plans.¹ Montgomery County adopted its own action plan in 2016 and outlines the following goals:

Using data-informed and equitable approaches, Montgomery County will systematically update the roadway network to create complete, safe streets and build a culture of safety through purposeful campaigns and engagement to eliminate serious and fatal collisions by 2030.²

Bill 11-23 proposes the following actions to advance the County's Vision Zero goals:

- 1) require an infrastructure review for pedestrian-related collisions within a County's school zone;
- 2) prohibit a driver of a motor vehicle from making a right turn on a red at certain intersections;
- 3) require certain traffic control devices³ at crosswalks in the County's downtown and town center areas;
- 4) require the County Executive to provide an automated traffic enforcement plan; and
- 5) generally amend the law regarding motor vehicles and traffic control.

Bill 11-23, Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan (The Safe Streets Act of 2023) was introduced by the Council on February 28, 2023.⁴

METHODOLOGIES, ASSUMPTIONS, AND UNCERTAINTIES

Methodology. OLO conducted a literature review of multi-modal transportation, Complete Streets, Vision Zero and their impacts on greenhouse gas emissions and community resilience, to understand the impacts of the actions proposed by Bill 11-23. OLO also spoke with County staff with expertise on Vision Zero and related initiatives, such as Complete Streets.

Assumptions. The actions proposed by Bill 11-23 could encourage constituents to use other modes of transportation besides automobiles, which could lead to a decrease in automobile trips in the County and a decrease in greenhouse gases associated with transportation. Achieving Vision Zero goals also enhances community resilience by creating safer and increased access to active and public transportation options, particularly in equity emphasis areas.

Uncertainties. There are a few uncertainties associated with the analysis of Bill 11-23: (1) Whether actions proposed by this bill will change the behavior of constituents in choosing to walk, bike, or ride public transit instead of traveling by automobile; and (2) The extent to which actions proposed by the bill will reduce pedestrian and cyclist-involved crashes at intersections.

COMPLETE, SAFE STREETS AS A STRATEGY TO DECREASE GREENHOUSE GAS EMISSIONS AND ENHANCE COMMUNITY RESILIENCE

Complete Streets are a way to create safer and more accessible streets for all users, but especially for pedestrians, cyclists, and transit riders. Complete Streets are designed to be safer for all roadway users and have safety features for walkers and bikers, such as traffic control devices like: (1) eliminating right turns on red at certain intersections; and (2) using leading pedestrian intervals, which allows pedestrians to enter and establish themselves in a crosswalk intersection before vehicles are given a green light.⁵

Complete Streets are also an important tool in the County's Vision Zero plan.⁶ Research shows that encouraging other modes of transportation besides automobiles reduces both vehicle miles traveled and vehicles per capita.⁷ This decrease in automobile dependency can lead to a decrease in greenhouse gas emissions associated with transportation.⁸

Greenhouse Gas Emissions. Carbon dioxide (CO₂) emissions associated with transportation makes up about 42% of all County greenhouse gas emissions, according to 2018 data collected by the Metropolitan Washington Council of Governments (COG). This is due in part to automobile dependency in the County, as according to survey data from 2016, more than 65% of commuters chose to drive alone.⁹ Reducing private

vehicle trips is listed as a needed action to meet the County's CO2 reduction goals, as outlined in the County's Climate Action Plan.¹⁰

By implementing policies that encourage more active transportation (i.e., walking, cycling) through improving safety and infrastructure, it can lead to less dependence on automobiles as the primary mode of transportation, which in turn can lead to reduced greenhouse gas emissions associated with transportation.¹¹

Community Resilience. Equity emphasis areas (EEAs) in the County, which have higher concentrations of BIPOC and low-income individuals, are disproportionately impacted by serious and fatal crashes. EEAs make up only 7% of land and 14% of roadway miles in the County but contain 30% of all serious and fatal roadway crashes.¹² This is due to structural and environmental racism in the allocation of public and environmental goods, which has led to less green space and less safe infrastructure for active transportation, such as a lack of sidewalks, intersections and crosswalks located on multilane, high-speed highways in predominantly BIPOC and low-income communities.¹³

Improving infrastructure and traffic patterns to promote safer active transportation in the County, especially in EEAs, can enhance community resilience. Safer access to additional modes of transportation increases access to stores, doctor offices, and other destinations, thus improving community resilience.¹⁴ More active modes of transportation can also promote physical activity and reduce health disparities.¹⁵

Further, for improvements in recovering from climate shocks, such as extreme weather events, increased access to transportation routes and services enable communities to access evacuation routes, rescue services, and other resources during an emergency. This is especially critical for communities where fewer families have access to a vehicle and depend on walking, cycling, or public transportation for travel.¹⁶

Conclusions. Overall, reducing automobile dependency and increasing access to resources such as public transit stops, grocery stores, work, and health care facilities via active transportation can enhance community resilience and lead to a reduction in greenhouse gas emissions associated with transportation in the County.¹⁷ However while some studies have shown a causal link between increased infrastructure and policies that encourage multi-modal transportation, some experts suggest policies encouraging more active and public transportation alone may not have the intended effect of shifting away from personal vehicle use or reducing GHG emissions.¹⁸ Achieving these outcomes may require a comprehensive plan with policies that specifically target a decrease in personal vehicle use (i.e., congestion pricing) and make active or public transportation the easier, more convenient choice.¹⁹

ANTICIPATED IMPACTS

The purpose of Bill 11-23 is to advance the County's Vision Zero goals by eliminating serious and fatal crashes through specific transportation initiatives, including prioritizing student safety in school zones, providing more access for pedestrians at crosswalks, prohibiting right turns on red in certain intersections, and requiring a plan for increased automated traffic enforcement.

These initiatives are meant to update the roadway network to create safe streets and increase safety for pedestrians and cyclists, particularly in equity-emphasis areas where constituents are more likely to experience an injury or fatality as a pedestrian and/or bicyclist. Increasing safety and access for pedestrians and cyclists can encourage more constituents to choose these modes of travel, rather than individual automobile travel, which could lead to a decrease in greenhouse gas emissions and the enhancement of community resilience.

OLO anticipates Bill 11-23 could have a positive impact on the County's contribution to addressing climate change as the provisions of Bill 11-23 are intended to encourage safer streets for all users, which can lead to less dependence on automobiles. This lowered dependence could have co-benefits of lowered greenhouse gas emissions associated with transportation and enhanced community resilience. However, the significance of this impact is indeterminate.

RECOMMENDED AMENDMENTS

The Climate Assessment Act requires OLO to offer recommendations, such as amendments or other measures to mitigate any anticipated negative climate impacts.²⁰ OLO does not offer recommendations or amendments as Bill 11-23 could have a positive, indeterminant impact on the County's contribution to addressing climate change, including the reduction and/or sequestration of greenhouse gas emissions, community resilience, and adaptative capacity.

CAVEATS

OLO notes two caveats to this climate assessment. First, predicting the impacts of legislation upon climate change is a challenging analytical endeavor due to data limitations, uncertainty, and the broad, global nature of climate change. Second, the analysis performed here is intended to inform the legislative process, not determine whether the Council should enact legislation. Thus, any conclusion made in this statement does not represent OLO's endorsement of, or objection to, the bill under consideration.

PURPOSE OF CLIMATE ASSESSMENTS

The purpose of the Climate Assessments is to evaluate the anticipated impact of legislation on the County's contribution to addressing climate change. These climate assessments will provide Council with a more thorough understanding of the potential climate impacts and implications of proposed legislation, at the County level. The scope of the Climate Assessments is limited to the County's contribution to addressing climate change, specifically upon the County's contribution to greenhouse gas emissions and how actions suggested by legislation could help improve the County's adaptive capacity to climate change, and therefore, increase community resilience.

While co-benefits such as health and cost savings may be discussed, the focus is on how proposed County bills may impact GHG emissions and community resilience.

Economic Impact Statement

Montgomery County, Maryland

Bill 11-23

Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan

SUMMARY

The Office of Legislative Oversight (OLO) anticipates that enacting Bill 11-23 would have an overall positive impact on economic conditions in the County in terms of the Council’s priority indicators. OLO expects the Bill to induce pedestrian and bicycle infrastructure development in certain downtown and town center areas in the County that otherwise would not occur in the absence of the policy change. Businesses contracted to carry out this development likely would experience increased business income. Moreover, by improving pedestrian and bicycle access to certain areas, the Bill likely would increase income for retail and food service businesses. The Bill may also reduce vehicle expenses and increase employment opportunities for certain residents. Though generally positive, the Bill could have negative economic impacts for certain auto-focused businesses.

BACKGROUND AND PURPOSE OF BILL 11-23

Vision Zero is a strategy to ultimately eliminate all traffic fatalities and severe injuries, while increasing safe, healthy, and equitable mobility for all. Since its inception in Europe in the 1990s, a growing number of jurisdictions in the United States have adopted Vision Zero action plans.¹ Montgomery County adopted its own action plan in 2016 and outlines the following goals:

Using data-informed and equitable approaches, Montgomery County will systematically update the roadway network to create complete, safe streets and build a culture of safety through purposeful campaigns and engagement to eliminate serious and fatal collisions by 2030.²

Bill 11-23 proposes the following actions to advance the County’s Vision Zero goals:

- 1) require an infrastructure review for pedestrian-related collisions within a County’s school zone;
- 2) prohibit a driver of a motor vehicle from making a right turn on a red at certain intersections;
- 3) require certain traffic control devices³ at crosswalks in the County’s downtown and town center areas;
- 4) require the County Executive to provide an automated traffic enforcement plan; and

¹ [Vision Zero Homepage](#).

² [Introduction Staff Report for Bill 11-23](#).

³ Certain traffic control devices include a “leading pedestrian interval” (LPI), which gives pedestrians the opportunity to enter the crosswalk at an intersection 3-7 seconds before vehicles are given a green indication.

- 5) generally amend the law regarding motor vehicles and traffic control.

Bill 11-23, Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan (The Safe Streets Act of 2023) was introduced by the Council on February 28, 2023.⁴

INFORMATION SOURCES, METHODOLOGIES, AND ASSUMPTIONS

Per Section 2-81B of the Montgomery County Code, the purpose of this Economic Impact Statement is to assess, both, the impacts of Bill 11-23 on residents and private organizations in terms of the Council’s priority economic indicators and whether the Bill would have a net positive or negative impact on overall economic conditions in the County.⁵

To assess Bill 11-23’s impacts on the Council’s priority economic indicators, OLO performs a qualitative assessment based on the following source of information:

- Jamey Volker and Susan Handy, “[Economic impacts on local businesses of investments in bicycle and pedestrian infrastructure: a review of the evidence](#),” *Transport Reviews*, 41:4 (2021): 401-431.

The core assumption made in this analysis is that Bill 11-23 likely would result in creating and/or improving pedestrian and bicycle infrastructure⁶ in ways that may advance the County’s Vision Zero goals. Indeed, the Bill would require certain improvements, namely prohibiting a driver of a motor vehicle from making a right turn on a red at certain intersections and require certain traffic control devices at crosswalks. Moreover, its other requirements – performing infrastructure reviews for pedestrian-related collisions within a County’s school zone and developing an automated traffic enforcement plan – may also induce further pedestrian and infrastructure development by the County.

This analysis does not account for any economic impacts associated with reduced fatalities and injuries the Bill may cause.

VARIABLES

The primary variables that would affect the economic impacts of Bill 11-23 are the following:

- Number and size of pedestrian and bicycle infrastructure development; and
- Quality of pedestrian and bicycle access to local businesses.

⁴ [Introduction Staff Report for Bill 11-23](#).

⁵ Montgomery County Code, [Sec. 2-81B](#).

⁶ Pedestrian infrastructure includes sidewalks, pedestrian crossings, pedestrian seating, landscaping of the pedestrian space, and other amenities designed to support active travel. Bicycle infrastructure includes bicycle paths, lanes, boulevards, parking and other amenities. Volker and Handy, “[Economic Impacts on Local Businesses of Investments in Bicycle and Pedestrian Infrastructure](#).”

IMPACTS

WORKFORCE ■ TAXATION POLICY ■ PROPERTY VALUES ■ INCOMES ■ OPERATING COSTS ■ PRIVATE SECTOR CAPITAL INVESTMENT ■ ECONOMIC DEVELOPMENT ■ COMPETITIVENESS

Economic Impacts of Bicycle/Pedestrian Infrastructure

OLO examined a 2021 review of the research literature on the economic impacts to local businesses of new or enhanced bicycle and pedestrian infrastructure. The authors reviewed 23 peer-reviewed and non-peer-reviewed studies,⁷ focusing on the U.S. and Canada, that either compared consumer spending pedestrians/bicyclists and automobile users or quantified the economic impact to local businesses following the development of bicycle or pedestrian infrastructure. They drew the following conclusions based on the current state of research on the topic:

- Bicycle and pedestrian infrastructure likely do not reduce net consumer spending at local businesses by hindering motorists from accessing businesses.
- Bicycle and pedestrian infrastructure development – even where vehicular travel lanes or parking are reduced – likely provides a positive economic benefit to local retail and food service businesses, particularly in terms of the number of visiting customers and business sales.
- Some studies indicate that auto-focused businesses, like gas stations and auto repair shops, may experience reduced sales.

Businesses, Non-Profits, Other Private Organizations

OLO anticipates that enacting Bill 11-23 would have positive economic impacts on certain private organizations in the County in terms of the Council's priority indicators.

By creating and improving pedestrian and bicycle infrastructure, the Bill likely would impact three business groups:

- businesses contracted by the County to create or improve bicycle and pedestrian infrastructure;
- retail and food service businesses near bicycle and pedestrian infrastructure; and
- auto-focused businesses.

Businesses contracted by the County (prime and subcontractors) likely would experience increased business income. Depending on the size of the projects, they may increase the size of their workforces.

Based on the 2021 review described above, the Bill likely would increase customer visits and sales for certain retail and food service businesses near new or improved pedestrian and bicycle infrastructure. Holding all else equal, higher sales would increase net business income. Depending on the magnitude of this effect, certain businesses hire more workers.

While the policy change likely would economically benefit certain contractors and local businesses, Bill 11-23 could negatively impact auto-focused businesses. By improving pedestrian and bicycle access to certain downtown and town center areas in the County, the Bill could reduce consumer need for proximate auto-focused businesses. If sales to these businesses decrease, they likely would experience lower business incomes.

⁷ Authors included non-peer-reviewed studies due to the limited number of peer-reviewed studies on the topic.

There is some evidence that pedestrian and bike infrastructure development increase commercial property values. However, given mixed findings in the literature, OLO is unable to anticipate whether Bill 11-23 would have this effect.

Beyond these potential impacts, OLO does not expect the Bill to affect private organizations in terms of the Council's other priority indicators.

Residents

OLO anticipates that enacting Bill 11-23 would have positive economic impacts on certain residents in the County in terms of the Council's priority indicators. By improving pedestrian and bicycle access to certain local businesses, Bill 11-23 may provide residents with greater transportation flexibility. Certain residents may reduce expenses associated with vehicle transportation. Moreover, residents employed by businesses that increase workforces more than they otherwise would in the absence of the Bill likely would experience increases in household income.

Beyond this potential impact, OLO does not expect the Bill to affect residents in terms of the Council's other priority indicators.

Net Impact

OLO anticipates Bill 11-23 would have a positive impact on overall economic conditions in the County in terms of the Council's priority indicators. As described above, by improving pedestrian and bicycle access to certain local businesses, the Bill likely would increase income for certain business contracted by the County to develop pedestrian and bicycle infrastructure that otherwise would not occur and retail and food service businesses near these infrastructure developments. Moreover, the Bill may reduce vehicle expenses and increase employment opportunities for certain residents. Although the Bill may negatively impact certain auto-focused businesses, OLO expects the policy change to have an overall positive impact on economic conditions given the strength of evidence on the positive economic impacts of pedestrian and bicycle infrastructure development.

CAVEATS

Two caveats to the economic analysis performed here should be noted. First, predicting the economic impacts of legislation is a challenging analytical endeavor due to data limitations, the multitude of causes of economic outcomes, economic shocks, uncertainty, and other factors. Second, the analysis performed here is intended to *inform* the legislative process, not determine whether the Council should enact legislation. Thus, any conclusion made in this statement does not represent OLO's endorsement of, or objection to, the Bill under consideration.

MONTGOMERY COUNTY COUNCIL
ROCKVILLE, MARYLAND

ANDREW FRIEDSON
COUNCILMEMBER
DISTRICT 1

MEMORANDUM

March 24, 2023

TO: Council President Evan Glass, Chair, T&E Committee
Councilmember Marilyn Balcombe
Councilmember Kate Stewart

FROM: Council Vice President Andrew Friedson 

SUBJECT: Proposed Amendments to The Safe Streets Act of 2023

Thank you, Council President Glass, for your leadership on this sorely needed legislation and for your past efforts to improve pedestrian and bicyclist safety in communities across our county.

Bill 11-23, Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan, also known as The Safe Streets Act of 2023, contains a provision that requires the Montgomery County Department of Transportation to conduct an infrastructure review of student-involved collisions within the County's school zones. This provision would create a process to vastly improve the safety of our students as they walk, bike, and roll to school and make valuable information regarding the circumstances of collisions and potential remedies available to the public in a timely manner. However, I believe that there is more that we can do within our power as a county to improve safety for our students and all our road users.

We heard from residents and advocates who testified at the Council public hearing on March 21 that there are gaps in the proposed infrastructure review requirement that must be filled to create a more comprehensive, informed review process. The infrastructure review requirement proposed in the draft legislation would only apply to student-involved collisions and would not account for collisions involving parents, caretakers, and others who use the roads in a school zone. As Carolyn Wilson of Montgomery County Families for Safe Streets testified on Tuesday, eight of the nine collisions that occurred in January 2023 involving students and school zones are currently outside the scope of the proposed bill. We can and must learn from incidents and tragedies involving non-students so we can respond accordingly with improvements that our community can see and experience when walking, biking, and rolling to school in Montgomery County. To help us make the necessary road safety improvements to avoid future tragedies that threaten student lives and school safety, **I propose an amendment to broaden the scope of the infrastructure review requirement such that it applies to all collisions in school zones regardless of whether the collision was student-involved or occurred during arrival and dismissal times. Furthermore, the infrastructure review requirement**

should apply to all collisions within 100 feet of school bus stops. This provision would have required infrastructure reviews following the tragic deaths of nine-year-old Sophia Chen and 7-year-old Muhammad Haekal Saifullah Elsyaf and the life-altering injuries of 17-year-old Eyal Haddad.

Bill 11-23 also makes strides in improving the safety of non-motorists throughout the County by requiring Leading Pedestrian Intervals (LPIs) at every crosswalk of a County road located in downtown and town center areas. LPIs allow pedestrians or bicyclists to enter the intersection in advance of vehicles travelling in the same direction and are a proven Federal Highway Administration safety countermeasure because they provide pedestrians an opportunity to establish themselves in the crosswalk, making them more visible and limiting potential for conflict. Providing LPIs in areas with high levels of pedestrian activity will improve safety. As such, **I propose expanding the scope of this legislation to require Leading Pedestrian Intervals as the default at every crosswalk of a County road within one block of schools, parks, libraries, community centers, and transit stations in addition to all downtown and town center areas.**

I want to reiterate my thanks to the Council President for his efforts to craft and advance this important legislation. I also want to express my support for this bill's provisions that expand no right turn on red requirements in downtown and town center areas and require the County Executive to establish an automated traffic enforcement plan. I hope the Committee will consider the proposed amendments as welcomed improvements to a bill that helps us create a county where the safety of our students and pedestrians are prioritized. Thank you for your consideration.

CC: Ludeen McCartney-Green, Legislative Attorney, Montgomery County Council

OFFICE OF THE COUNTY EXECUTIVE

Marc Elrich
County Executive

Richard S. Madaleno
Chief Administrative Officer

MEMORANDUM

March 24, 2023

TO: The Hon. Evan Glass, Council President and Chair of T&E Committee
Montgomery County Council

FROM: Wade Holland, Vision Zero Coordinator
Office of the County Executive

SUBJECT: Executive Branch Comments and Analysis for Bill 11-23

Executive staff from the Departments of Transportation and Police have reviewed Bill 11-23 - Motor Vehicles and Traffic - Traffic Control Signals, Devices, and Enforcement Action Plan and submit the following amendments and analysis for the County Council's Transportation and Environment (T&E) committee for consideration.

Estimated Crash Reduction for Bill 11-23 as Introduced

Bill 11-23 as introduced is estimated to reduce crashes between motor vehicles and non-motorists (pedestrians and cyclists) by 5 to 10 each year across the downtown and town center County intersections with no turn on red and lead pedestrian intervals. Working with the State Highway Administration to implement these treatments at their intersections would double the annual crash reduction.

New roadways with automated speed enforcement are estimated to have similar results as prior Safe Speed corridors with a 10% reduction in mean speeds, 62% reduction in the likelihood for a motor vehicle traveling more than 10MPH above the posted speed limit, and a 39% reduction in the likelihood that a crash results in a serious or fatal injury.¹ Additional red-light cameras will reduce right-angle and left-turn opposite direction crashes by approximately 26% and increase

¹ "Effects of automated speed enforcement in Montgomery County, Maryland, on vehicle speeds, public opinion, and crashes," IIHS, 2016. <https://www.iihs.org/topics/bibliography/ref/2097>.

rear end crashes by 18%.² Because rear end crashes are less severe than right-angle and left-turn crashes, the overall effect of the red-light cameras are reduced injury crashes.

The fiscal, climate, racial equity, and economic impact analyses will be transmitted from the Office of Management and Budget and Office of Legislative Oversight.

Summary of Suggested Amendments

The suggested amendments to Bill 11-23 as introduced are summarized below. Recommended changes to the bill as introduced are enclosed.

Traffic Infrastructure Review for Safe Routes to School

Proposed Amendment	Reason for Amendment
Include holistic recommendations including changes to education and outreach.	Roadway infrastructure is one part of the Safe System and the review should encompass all parts of the system.
Amend the language to clarify that the six month clock starts upon notification of a crash to the Department of Transportation by the relevant law enforcement agency.	This amendment aligns the County program with SHA's timing to review fatal crashes and accounts for longer crash investigations under State law. This will improve consistency of communication among agencies.
Clarify the timing around arrival and dismissal times as 30 minutes before and after the bell.	The current language does not provide a time window and leaves it up to interpretation of when arrival and dismissal times start and end.
Clarify that the reviews are for students involved going to and from school using non-motorized (walking, biking, scootering) forms of travel.	The bill as introduced would include any crash including where the student was a passenger in a minor crash with no injuries. Scoping the bill for non-motorized crashes is more in line with the existing SRTS walkshed studies.
Add language referring any crashes not on County maintained roadways to the authority having jurisdiction for the facility.	The County has no control over state and municipal public roads, private roads, private property, or school property. This additional provision would alert the proper authority to the crash and prompt action that authority believes is warranted.

² American Association of State Highway and Transportation Officials. Highway Safety Manual. Washington, DC, 2010.

Traffic Control Signals and Devices

Proposed Amendment	Reason for Amendment
Amend the language to require the County Executive or the Executive's designee to provide a plan and cost estimate for expansion of "No Right Turn on Red" and "Leading pedestrian intervals" to include downtown and town center areas and other areas with moderate to high pedestrian volume such as near schools and parks.	This amendment is in line with the automated enforcement action plan in the bill. This would allow MCDOT to review areas where these treatments are most needed, prioritize the roll out, provide transparency in the roll out, and partner with the State Highway Administration to potentially change more signals than required under the bill as introduced.

Automated Enforcement Action Plan

Proposed Amendment	Reason for Amendment
Amend the language to require the plan to include any automated enforcement technology currently approved for use in Maryland and Montgomery County.	This amendment will help future proof the bill by not having to alter the County Code when new automated technology is approved for use and should be included in the plan.

(g) For non-County maintained roadways, the Department of Transportation will refer crashes occurring in these locations to the authority having jurisdiction for the facility.

Formatted: Font: 14 pt

Formatted: List Paragraph, Indent: Left: 2.37", Right: 0.97"

(hg) The Department of Transportation must:

- (1) complete the Safe Routes to School ~~traffic infrastructure~~ review within 6 months after notification by law enforcement that an injury or fatality has occurred on a County maintained roadway; and
- (2) post the contents of the review on the County's website.

31-9C. Traffic Control Signals and Devices.

(a) *Legislative findings.* The County Council finds and declares that:

- (1) In 2016, the Montgomery County Council passed Resolution No. 18-390 supporting Vision Zero and the policies and investments necessary to achieve it by 2030. Vision Zero is a strategy to eliminate all traffic fatalities and severe injuries while increasing safe, healthy, and equitable mobility for all.
- (2) Progress has been made to reduce injuries and deaths on our roadways due to more sidewalk installations, dedicated bike lanes, automated traffic enforcement, and other traffic calming techniques that decrease safety risks for non-motorists and motorists alike. While we have made advancements in our safety investments for pedestrians and cyclists in the County, residents in our equity-emphasis areas are still more likely to experience an injury or fatality on our roads.
- (3) Since 2020, 41 pedestrians and bicyclists have been killed by motorists, and over 1,400 have been injured. In 2022 alone, 19 non-motorists died and 574 were hit.
- (4) Since 2015, 64% of all pedestrian-involved crashes occurred at intersections. For bicyclists, 74% of all incidents occurred at intersections.
- (5) Ensuring the health and safety of 1.1 million residents will continue to be a top priority for the Montgomery County

government. By implementing evidence-based measures and maximizing resources to areas in critical need, more lives can be saved.

(b) Definitions. As used in this Section:

Department means the Department of Transportation.

Director means the Director of Transportation or the Director's designee.

Downtown area has the same meaning as stated in Section 49-31.

Leading pedestrian interval means a traffic control device that:

(1) allows a pedestrian to establish a presence in the crosswalk before vehicles are given a green indication; and

(2) has specifications in accordance with the most recent edition of the Manual on Uniform Traffic Control Devices for Highways and Streets.

Town center area has the same meaning as stated in Section 49-31.

(c) The County Executive, or the Executive's designee, must transmit to the Council a Traffic Control Signals and Devices plan within 270 days of enactment that includes:

(1) A plan to implement "No Right Turn on Red" and "Leading Pedestrian Intervals" in areas such as downtown and town center areas, near major access points to parks, schools, community centers and libraries including identification of locations and reasons where these treatments will not be installed.

(2) A timeline for deploying the recommended expansion of "No Right Turn on Red" and "Leading Pedestrian Intervals" at identified intersections.

(3) the amount of funding necessary, in addition to what has been authorized as of the date of the plan's publication, by fiscal year,

to implement "No Right Turn on Red" and "Leading pedestrian intervals" at identified intersections;

(4) outreach and coordination with Maryland Department of Transportation, State Highway Administration for implementing signal changes on state highways; and

(5) any other necessary recommendations for consideration.

(d) Biannual plan. The Executive must report on the status of plan

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 12 + Alignment: Left + Aligned at: 0.45" + Indent at: 1.37"

TRAFFIC SIGNAL SAFETY AT INTERSECTIONS

PURPOSE OF THIS DOCUMENT

This document provides an analysis and recommendations for safety treatments at signalized intersections in line with the Vision Zero Action Plan's action P-04 and [Bill 11-23](#) - Motor Vehicles and Traffic - Traffic Control Signals, Devices, and Enforcement Action Plan.

SUMMARY FINDINGS

Prohibiting right-turns-on red in conjunction with leading pedestrian intervals is a proven safety countermeasure that both the County and State have been implementing at appropriate locations as part of Vision Zero.

Use of leading pedestrian intervals with a turn restriction can [lower pedestrian injury crashes by more than 13%](#). Based on the bill requirements that LPIs be installed at County intersections with traffic signals in downtowns and town centers, this policy could reduce pedestrian and cyclists struck in an intersection by 5 crashes per year. To get a higher crash reduction, SHA maintained roadways would need to be included in the LPI rollout. Using all traffic controlled intersections in downtown and town center policy areas, the reduction would be closer to 10 crashes each year however, we cannot predict how many of these crashes would have been serious or fatal.

Prohibiting right-turn-on-red *alone* is highly unlikely to affect the number of serious and fatal crashes in Montgomery County. Studies in other jurisdictions have found prohibiting right-turn-on red can improve pedestrian comfort in terms of reducing vehicle and pedestrian conflicts when drivers enter the crosswalk across their direction of travel in a rolling stop or failing to yield during right turns on green, but may increase conflicts with pedestrians crossing parallel to the movement of traffic in conformance with traffic signal indications.

PEDESTRIAN AND BIKE CRASHES AT INTERSECTIONS

66% of pedestrians and 72% cyclists struck by a motor vehicle from 2016 to 2022 were struck in or in relation¹ to an intersection. Serious and fatal crashes have similar pattern with 57% of pedestrians and 61% of cyclists struck in or relation to an intersection.

There were 26 pedestrians and 19 cyclists struck when the driver of a motor vehicle was making a right turn on red. This represents 0.8% of pedestrian and 2.1% of cyclist crashes. Collisions involving left-turning vehicles and through-traffic movements are far more prevalent and show an dramatically higher occurrence of serious outcomes. Of the 45 right turn on red crashes,

¹ An intersection related crash is a crash that (1) occurs on an approach to or exit from an intersection and (2) results from an activity, behavior, or control related to the movement of traffic units through the intersection.

38% occurred in downtown and town center policy areas. Of the 45 right-turn-on-red crashes, 6 were at a County maintained intersection with the remainder along State Highway Administration controlled intersections.

PEDESTRIAN AND CYCLIST CRASHES AT INTERSECTIONS BY POLICY AREA

The following tables summarize crashes where a pedestrian or cyclist was struck by a motor vehicle between 2016 and 2022 in the downtown and town center road code policy areas. Of the 45 crashes where the driver was turning right turn on red between 2016 and 2022, 17 (38%) were in downtown and town centers. All injuries were minor. The urban areas with more than one right turn on red crash involving a pedestrian or cyclists were Bethesda (5), Germantown Town Center (2), Great Seneca Science Corridor (2), Twinbrook (2), and White Flint 2 (2).

INTERSECTION CRASHES FOR LOCAL AND STATE ROADS

The following table shows the number of pedestrians and cyclists struck by a motorized vehicle between 2016 and 2022 on all intersections regardless of local, county, or state control.

INTERSECTION CRASHES FOR COUNTY ROADS³ ONLY

At intersections of County-maintained and State-maintained roadways, the State controls the intersection and any traffic control devices. Because Bill 11-23 only affects County-maintained intersections, the following table provides the same view as the data in the table above, but only for county intersections. Inside the downtown and town center areas, there were 265 pedestrian and 67 cyclist involved crashes at county-maintained intersections. Of the 265 crashes, 202 (76%) were at traffic controlled intersections and 6 involved a right-turn-on red vehicle movement.

Urban Road Code Area	Pedestrians Struck at Intersection	Pedestrians Struck at Signalized Intersection ⁴	Pedestrian Struck during RToR	Cyclists Struck at Intersection	Cyclists Struck at Signalized Intersection	Cyclists Struck during RToR

TRAFFIC VIOLATIONS ISSUED FOR RIGHT-TURN-ON-RED

Violations for making right turns on red where prohibited is governed by Maryland Transportation Article § 21-202(k). This article also covers turns made on overnight flashing red signals. Between 2016 and 2022, Montgomery County Police conducted 403 stops for violating this traffic article. 158 of the 403 (39%) were made in urban road code areas.

[Systemic Application of Multiple Low-Cost Countermeasures at Stop-Controlled Intersections](#)

[Yellow Change Intervals](#)

NTOR AND LPI BACKGROUND

Below summarizes the reasons why jurisdictions utilize no right turn on red and leading pedestrian intervals and the experience other jurisdictions have had with these treatments.

NO TURN ON RED (NTOR)

BACKGROUND FOR ALLOWING RIGHT TURNS ON RED

From [FHWA](#): “A permissible ‘Right Turn on Red’ (RTOR) was introduced in the 1970s as a fuel savings measure and has sometimes had detrimental effects on pedestrians. While the law requires motorists to come to a full stop and yield to cross street traffic and pedestrians prior to turning right on red, many motorists do not fully comply with the regulations. Motorists are so intent on looking for traffic approaching on their left that they may not be alert to pedestrians on their right. In addition motorists usually pull up into the crosswalk to wait for a gap in traffic, blocking pedestrian crossing movements. In some instances, motorists simply do not come to a full stop.”

SAFETY OF RIGHT TURNS ON RED

Crash Modification Factors

- Permitting right-turn-on-red where previously prohibited right-turn-on red:
 - Vehicle/bicycle and Vehicle/pedestrian: [69% increase](#)
 - Right turn crashes with minor and serious injuries: [60% increase](#)
- Prohibit right-turn-on red where previously RTor was allowed:
 - Highway Safety Manual formula for motorist only crashes: $CMF = 0.98^{n_{prohib}}$

Experience from other jurisdictions

[DC](#)

- In late 2018, DDOT piloted 100 location for NToR implementation based on the level of pedestrian activity, proximity to pedestrian generators, crash history, and geometric or operational characteristics.
- vehicle-to-vehicle conflicts dropped by 97% after the “no turn on red” signs were installed.
- Number of times drivers failed to yield to pedestrians when the light was red dropped by 92%.
- Drivers yielding to pedestrians when their light was green, with violations dropping by 59%.
- 30% more drivers encroaching on crosswalks likely due to drivers starting to make a turn on red and then realizing it was illegal, so ended up in the crosswalk.
- Four of the 252 approaches to intersections that DDOT monitored, drivers became more likely to enter crosswalks with pedestrians during green lights.

- Improved compliance using R10-11 and R10-11(1) signs as a standard.

San Francisco

- SFMTA posted No Turn on Red signs at over 50 intersections in the Tenderloin to study how they can make streets safer to cross.
- Findings from a before/after study reveal that No Turn on Red (NTOR) restrictions can keep crosswalks clear and reduce close calls on major intersections.
- 92% compliance with vehicles obeying turn restrictions.
- No significant change in the percentage of turning vehicles that yield at the crosswalk to pedestrians on a green light.

GUIDANCE ON NTOR IMPLEMENTATION

Maryland Manual on Uniform Traffic Control Devices ([MdMUTCD](#))

The Maryland Manual on Uniform Traffic Control Devices (MdMUTCD) allows for the implementation of No Turn on Red Signs on roadways and provides the following guidance for determining if NTOR should be considered (p. 133):

“No Turn on Red sign should be considered when an engineering study finds that one or more of the following conditions exists:

- A. Inadequate sight distance to vehicles approaching from the left (or right, if applicable);
- B. Geometrics or operational characteristics of the intersection that might result in unexpected conflicts;
- C. An exclusive pedestrian phase;
- D. An unacceptable number of pedestrian conflicts with right-turn-on-red maneuvers, especially involving children, older pedestrians, or persons with disabilities;
- E. More than three right-turn-on-red accidents reported in a 12-month period for the particular approach; or
- F. The skew angle of the intersecting roadways creates difficulty for drivers to see traffic approaching from their left.”

Federal Highway Administration

- Prohibiting right turns on red is a simple, low cost measure. Together with a leading pedestrian interval, the signal changes can benefit pedestrians with minimal impacts on traffic. They should be done in locations with substantial pedestrian volume and places where children cross.
- Part-time ROTR prohibitions during the busiest times of the day may be sufficient to address the problem.
- Signs should be clearly visible to right-turning motorists stopped in the curb lane at the crosswalk.

LEADING PEDESTRIAN INTERVALS (LPI)

SAFETY OF LEADING PEDESTRIAN INTERVALS

Crash Modification Factors

- 13% reduction in pedestrian-vehicle crashes at intersections ([FHWA](#) study)
- 10% reduction in total crashes ([Chicago, IL](#))
- 19% reduction in pedestrian-vehicle crashes ([Chicago, IL](#))
- 59% reduction in pedestrian-vehicle crashes ([State College, PA](#))

GUIDANCE ON LPI IMPLEMENTATION

[NACTO](#)

“Use LPIs at intersections where heavy turning traffic comes into conflict with crossing pedestrians during the permissive phase of the signal cycle. LPIs are typically applied where both pedestrian volumes and turning volumes are high enough to warrant an additional dedicated interval for pedestrian-only traffic.”

[Los Angeles DOT](#)

1. LPI should be considered at crosswalks controlled by a traffic signal if a. or b. apply:
 - a. The WALK phase is actuated.
 - b. For crosswalk legs with non-actuated WALK phases, one of the following conditions exist:
 - i. There are high volumes of turning vehicles (at least 200 vehicles-per-hour per crosswalk during peak hours).
 - ii. The intersection is within 500 feet of a facility that attracts or generates a significant number of vulnerable users (children, seniors, persons with disabilities) such as a school, park, hospital, or senior center.
 - iii. The intersection is along a High Quality Transit Corridor (HQTC). A HQTC is defined in the Southern California Association of Governments 2016 Regional Transportation Plan/Sustainable Communities Strategy as a corridor with fixed route bus service with service intervals of 15 minutes or less during peak commute hours. Note that LPI can have adverse impacts for transit routes operating parallel to the crosswalks where LPI is added.
 - iv. The intersection’s geometry is atypical, resulting in unexpected conflicts and visibility issues.
2. If LPI is implemented for a particular signalized crosswalk leg of an intersection, then it should be implemented for the adjacent parallel leg as well. However, it is not necessary to be implemented for the perpendicular legs since those legs can be considered

independently. Although LPI can be configured within most existing traffic signal phasing plans, specific cases may require the preparation of a new signal plan to revise the phase diagram (e.g., opposed phasing with a shared pedestrian phase) and may require a field modification of the controller. Additionally, when implementing LPI features for a crosswalk whose operation follows protected-permissive left turn (PPLT) phasing serving the left turn across the crosswalk in question, the controller will suppress the LPI feature in cycles when the left-turn arrow is served. The LPI feature will operate normally when the left-turn arrow is not served.

SCHOOL-AGE PEDESTRIANS STRUCK NEAR SCHOOLS

SUMMARY

[Bill 11-23](#) would require the Montgomery County Department of Transportation (MCDOT) to perform an infrastructure review when a student is involved in a collision within a County's school zone. The review must identify "any deficiencies in engineering, traffic control, and traffic operations; and appropriate corrective actions and crash reduction countermeasures that are consistent with the United States Department of Transportation's best practices and the County's Vision Zero program."

Depending on how the final bill is implemented, **expect between 15-25 reviews each year** at the high end. Accounting for marked school zones and crashes directly on MCPS property, this number of reviews required by MCDOT may dip below 15 reviews a year.

SCENARIOS

Below are various scenarios showing the number of historical crashes that occurred within a half mile of a Montgomery County Public School.

All County Government maintained roads and MCPS property

- Average number of peds/bikes ages 6-19 struck with **any or no injury** within 0.5 miles of a MCPS school building per year (2016-2019, 2022): 22
- Average number of peds/bikes ages 6-19 struck between the hours of 5AM and 6PM with **any or no injury** within 0.5 miles of a MCPS school building and: 19
- Average number of ped/bikes ages 6-19 struck with **serious or fatal injuries** within 0.5 miles of a MCPS school building per year (2016-2019, 2022): 3
- Average number of ped/bikes ages 6-19 struck with **serious or fatal injuries** between the hours of 5AM and 6PM within 0.5 miles of a MCPS school building per year and (2016-2019, 2022): 2

All roads and all off-road crashes

- Average number of peds/bikes ages 6-19 struck with **any or no injury** within 0.5 miles of a MCPS school building per year (2016-2019, 2022): 42
- Average number of peds/bikes ages 6-19 struck between the hours of 5AM and 6PM with **any or no injury** within 0.5 miles of a MCPS school building and: 36
- Average number of ped/bikes ages 6-19 struck with **serious or fatal injuries** within 0.5 miles of a MCPS school building per year (2016-2019, 2022): 5
- Average number of ped/bikes ages 6-19 struck between the hours of 5AM and 6PM with **serious or fatal injuries** within 0.5 miles of a MCPS school building per year and (2016-2019, 2022): 4

Montgomery County Families for Safe Streets
Montgomery County Council Bill 11-23: Safe Streets Act of 2023
Written Testimony, March 21, 2023

Good Afternoon. I'm here to present testimony on behalf of the Montgomery County Chapter of the organization Families for Safe Streets <https://mcofamiliesforsafestreets.org/> . In case you are not familiar with our organization, we are a relatively new chapter, started about two years ago. Our Mission is to provide support and shared community for families and friends of traffic crash victims; to help share stories of the lives of those lost in preventable traffic crashes; to convert these stories into effective advocacy efforts in Montgomery County and the State of Maryland; and to prompt changes that would prevent such tragedies from occurring in the future.

As you can probably imagine from this mission, our organization lives with the reality of the dangers to pedestrians, cyclists, and other vulnerable road users on a daily basis. For example, just last week, on March 16, a 75-year old man was killed while crossing the street on Columbia Pike at Stewart Lane.

Today I'm here to express our organizations support for the Safe Streets Act of 2023, with favorable amendments to include all school-related crashes within the scope of the Safe Routes to School Provision.

First, I want to clearly and unequivocally express our full support for the Automated Traffic Enforcement Plan and the Leading Pedestrian Intervals and No Turn on Red provisions.

Automated Traffic Enforcement Plan: Regarding the first, we strongly encourage the implementation of automated traffic enforcement as it is a critical, effective, and relatively low cost means to reduce traffic death. Human enforcement is not sufficient to achieve traffic speed reduction and running red lights , both of which are necessary to reduce traffic-related deaths and injuries.

Leading Pedestrian Intervals and No Turn on Red: As a pedestrian who lives in the downtown area of Silver Spring where there are currently leading pedestrian intervals and no turn on red at some intersections, I can say from personal experience that these changes make a huge difference to feeling safer when crossing streets in dense urban areas with high traffic volume. It is just simple common sense that if the pedestrian is already in the cross-walk, the visibility to the driver will be greater. Turning right on red creates a hazard by forcing the driver to look to the left for car traffic, while often ignoring to look right, and missing the pedestrians, cyclists, or other vulnerable road users in the cross walk. Eliminating this dangerous practice will reduce the risk to these individuals.

Safe Routes to School Infrastructure Provision: MoCoFSS feels strongly that the Safe Routes to School Infrastructure Provision as written is critical to include in the Safe Streets Act of 2023, but does not go far enough. The reality is that many school-related crashes happen outside the

current scope: 8/9 crashes involving students/schools that happened in January would have been outside of the scope of the law as currently written.

The scope must include:

ALL ROADS, state, county, municipal, M-NCPPC (4/9); and

ALL times for crashes in school zones or on school property as well as those involving students going to/from school, before, during, after arrival/dismissal (4/9)

The reasons we take these positions are three-fold:

- 1) With the narrow scope of the language, everytime a school-related crash happens, it will require determining if it's in or out of scope.
- 2) While MCDOT only has authority over county roads, our view is that there is no restriction from the County conducting an infrastructure review on state and municipal roads. The County currently implements infrastructure changes on non-county roads and provides input on non-county road design in master planning.
- 3) While MCDOT has countered that there are insufficient resources to conduct infrastructure reviews for all school-related crashes, we argue that this is the very reason for why these crashes need to be included in the Act. What higher priority does the County have than the safety of our children going/to from schools?

In summary, we strongly support the Safe Streets Act of 2023 with favorable amendments to expand the scope of the Safe Routes to School provision to include ALL school-related crashes.

Thank you for providing me the opportunity to testify today on behalf of the Montgomery County Chapter of Families for Safe Streets.

March 20, 20223

Montgomery County Council
Stella Warner Council Office Building
100 Maryland Avenue
Rockville, Maryland 20850

Re: Bill 11-23, Motor Vehicles and Traffic - Traffic Control Signals, Devices, and Enforcement Action Plan (The Safe Streets Act of 2023)

Dear Montgomery County Council:

I am writing to provide comments on the above referenced Safe Streets Act of 2023. First, I want to applaud the County for consideration of this Bill as it is long overdue. The state of street and roadway design and safety in our County is at a crossroads, pun intended. I support the proposed additions of an infrastructure review after any pedestrian related collision, restricting right turns on red at certain intersections, requiring traffic control devices at crosswalks in certain areas and other elements of the Bill. However, the biggest problem with the Bill is that it does not, and cannot, go far enough.

The safety of the County's roadways is not in the hands of those most familiar with the local issues or the most invested in their success. The County has a strong, progressive platform of street and pedestrian safety, but lacks the authority to implement it on the roads that matter most: state highways. If the County Council seriously wants to improve pedestrian and driver safety throughout the County, it is imperative that the County take over ownership/management of all roads controlled by the Maryland State Highway Administration (SHA). The SHA design guidelines and safety procedures are outdated and unresponsive to the rapidly growing urban context of Montgomery County. They are not capable of meeting the needs of our County and people are dying because of it.

I strongly support the above referenced Bill, but just as strongly encourage the County Council to take the next steps to protect all roads, all road users, all pedestrian crossings, and all intersections.

Montgomery County Council

Bill 11-23, Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan

I am generally in support of the principle behind the legislation. I am opposed to blanket prohibitions on right turns on red as they increase traffic dwell times, increase carbon emissions and increase vehicle transit times generally.

I am opposed to additional automated traffic enforcement devices as they further the surveillance state, undermine the US Constitution and the penumbras of privacy and are utilized to create profit for private companies. I would support an amendment adding additional funding for police traffic patrol and police traffic enforcement and prohibiting private vendors from profiting from traffic enforcement. Such funding should go directly to the county as an essential governmental function.

I would request that the legislation also consider adding language to control traffic near schools. At Highland Elementary we have a severe problem with parents and teachers entering the parking lot for the parent drop off utilizing the “No Entrance” side and turning left at the “Right Turn Only” exit from the parking lot/parent drop off. I would encourage you to significantly increase traffic fines for violating traffic control devices and signage in school zones. I have witnessed infractions 4 of the last 5 times I have dropped my children off in the last two weeks.

Sincerely,

Jared Hautamaki

To the Members of the Montgomery County Council

I was pleased to read of the efforts led by Evan Glass to ban right turns on red in areas where such turns endanger pedestrians and to lengthen the allowed crossing times at some intersections.

Over a year ago, my husband suffered a massive stroke and is paralyzed. He is living at Sunrise Bethesda on Battery Lane. Everyday, weather permitting, I take him out for a long walk. The stimulation of walking past the shops and restaurants is invaluable. At some intersections, I barely get the wheelchair into the crosswalk before the countdown to finish crossing begins. We have almost been hit several times by drivers turning right on red when our walk sign is on.

Another intersection that poses real danger is the one of Woodmont Avenue and Wisconsin Avenue just past NIH. Drivers coming south on Route 355, where the speed limit is 35, have a right turn lane without any traffic control onto Woodmont, where the speed is 30. There is a small median between lanes on Woodmont. While traffic on the south side of this intersection is controlled by a light, traffic on the north side is not. So pedestrians who have a walk sign are in danger from those cars coming down 355 at 35 mph and turning right without a need to stop. I try to avoid that intersection when I am out walking, but I have seen so many pedestrians almost hit by drivers not expecting anyone in the crosswalk.

Dear Members of the Montgomery County Council,

My name is Michael Larkin and I am a resident of Silver Spring. I support the enactment and strengthening of the Safe Streets Act for county-controlled streets because it is in accordance with our county's Vision Zero goals, and it recognizes that walking and rolling are legitimate forms of transportation.

People walk every day to run errands, grocery shop, and to access public transportation. Sadly, this commonplace activity is more dangerous than it should be. I could point out painful statistics, but I will offer some of my own experiences to explain the perils pedestrians face. On two separate occasions, I was nearly hit by a car while walking to my election worker shift for the Board of Elections in 2022. The first time was a driver turning right on red, and the second time a driver failed to give me the right of way while making a left turn. When a driver almost hit my friend in a crosswalk while visiting me in Silver Spring, the driver said he did not see my friend because he was looking for other cars. Of course, these incidents pale in comparison to the deaths of Miguel and Ana Ortiz, a married couple killed by a driver while walking to their polling station in Gaithersburg.

The need for the Safe Streets Act is clear. No turns on red lights (NTOR) will limit the all too often common occurrence of drivers not paying attention to pedestrians in the crosswalk. The implementation of Leading Pedestrian Interval (LPI) will give pedestrians time to establish their presence in the crosswalk, thereby reducing the probability of crashes due to drivers not seeing pedestrians. This Council should strengthen the LPI provision of the bill because LPI is a proven and prudent safety measure according to research from the [Federal Highway Administration](#). I strongly support the recommendation from the staff at the Planning Board to [expand the implementation of LPI](#) to areas outside of downtowns and town centers to include schools, parks, and community centers. These locations generate significant pedestrian activity whether it be students walking to school or residents going to vote because many of these locations are also polling stations. Moreover, improving pedestrian infrastructure is another tool to fight [food insecurity](#) in our community. Transportation costs and lack of access to a car play a role in limiting residents ability to buy food or receive help from feeding programs. Improved walkability would help people that want to walk but are faced with unsafe walking conditions.

Enforcement will be important to ensure the Safe Streets Act is not only a dream. There are already places where right on red is banned but drivers ignore or do not see the sign. I strongly urge the Council to hold the County Executive accountable for producing a robust automated enforcement plan of this legislation's provisions. The

County should also consider automatic enforcement or [road calming measures](#) where NTOR and LPI are not possible such as at stop signs and marked crosswalks.

Unfortunately, this legislation cannot rectify the dangerous conditions at state-controlled intersections. The Council should adopt the staff recommendation from the Planning Board to convene a working group of the Montgomery County Department of Transportation and State Highway Administration to explore where NTOR and LPI can be implemented at state-controlled intersections.

I recognize drivers face dangers from other drivers and the design of roads. I also know our community has people who make a living by driving. My grandfather was a taxi driver and his earnings partly funded my education. Although he had an attitude at times behind the wheel, my grandfather said while teaching me how to drive that “wheels yield to feet.” His admonition to me is good advice for everyone. The Safe Streets Act is a way to implement safety for everybody on our streets.

Thank you for your time and consideration.

Sincerely,

Michael Larkin
Silver Spring, M.D.

ACTION COMMITTEE FOR TRANSIT
Montgomery County Council Bill 11-23: Safe Streets Act of 2023
March 21, 2023

The Action Committee for Transit supports the Safe Streets Act of 2023, with favorable amendments to include all school-related crashes within the scope of the Safe Routes to School provision.

- **SAFE ROUTES TO SCHOOL INFRASTRUCTURE REVIEW.** We support this provision. However, the scope is far too narrow. Many school-related crashes happen outside the current scope. For example, the current scope of this bill would only include 1 of the 9 crashes involving students/schools that happened in January that we are aware of:
 1. Loiederman Middle School (student): YES
 2. Sherwood High School (student): NO, on a state road
 3. Julius West Middle School (student): NO, outside the school zone, on a city road
 4. Magruder High School (student): NO, outside the school zone (at a school bus stop)
 5. Seneca Valley High School (student): NO, outside the school zone
 6. Waters Landing Elementary School (student): NO, not at arrival or dismissal according to the time on the police report
 7. Wheaton High School (student): NO, not at arrival or dismissal (evening classes)
 8. Wheaton High School (student): NO, on a state road
 9. Landon School (crossing guard): NO, on a state road, no school zone

When a school-related crash happens, we do not want to have to keep checking the language in the law to determine whether the crash was in scope or out of scope.

At minimum, the scope must include:

- *All roads – state, county, municipal, M-NCPPC*
- *All times for crashes involving students going to or from school – before, during, and after arrival/dismissal*
- *All times for crashes in school zones or on school property - before, during, and after arrival/dismissal*

We have heard 2 reasons for the limited scope and disagree with both.

- Reason: MCDOT only has authority over county roads.
Our response: There is nothing stopping MCDOT from conducting an infrastructure review on state or municipal roads. Indeed, MCDOT routinely weighs in on design considerations for non-county roads, for example during master planning. MCDOT also implements infrastructure changes on non-county roads, for example the University Boulevard West bus lane project.

ACTION COMMITTEE FOR TRANSIT
Montgomery County Council Bill 11-23: Safe Streets Act of 2023
March 21, 2023

- Reason: MCDOT does not have the resources to conduct infrastructure reviews for all school-related crashes.
Our response: Safe routes to school should be one of the county's highest priorities. If there are so many school-related crashes that MCDOT does not have the resources to conduct infrastructure reviews for all of them, then that is actually an argument *in favor of* amending the bill's scope to include *all* school-related crashes. In addition, it would be helpful to have an estimate from MCDOT about the resources necessary for conducting infrastructure reviews for all school-related crashes. For reference, the recommended FY 2024 operating budget for the Department of Transportation's General Fund is \$61,180,870, including 461 full-time positions, 4 part-time positions, and 283.78 FTEs.
- AUTOMATED TRAFFIC ENFORCEMENT PLAN. We support this provision. Enforcement is an important component of Vision Zero. Automated traffic enforcement (speed cameras, red light cameras, stop sign cameras) can be deployed far more effectively and cost-effectively than the equivalent in human enforcement. In addition, we know from experience that the current unsystematic implementation of automated traffic enforcement is inadequate, complicated, and opaque. An automated traffic enforcement plan is the necessary first step toward systematic, county-wide implementation of automated traffic enforcement.
- LEADING PEDESTRIAN INTERVALS AND NO TURN ON RED. We support these two provisions, which go together. According to the US Department of Transportation Federal Highway Administration, they are proven safety countermeasures: "The LPI works to position the pedestrian within the crosswalk thereby decreasing the likelihood of a conflict or crash with a left- or right-turning vehicle ahead of the turning traffic. Agencies will often consider restricting Right Turns on Red (RTOR) in association with LPIs to better control for conflicts with right-turning vehicles." In non-technical language, the LPI reduces the chance that a driver turning right on green will hit a pedestrian who has begun crossing on the walk signal, and no-right-on-red restriction is necessary to reduce the chance that a driver turning right on red will hit a pedestrian who has begun crossing on the LPI. However, even without an LPI, no-right-on-red independently reduces the chance that a driver will turning right on red will hit a pedestrian who has begun crossing on the walk signal. We have provided explanatory diagrams, below.

ACTION COMMITTEE FOR TRANSIT
Montgomery County Council Bill 11-23: Safe Streets Act of 2023
March 21, 2023

**STATEMENT OF RICHARD LEVINE
LOCUST HILL CITIZENS' ASSOCIATION**

**BEFORE THE MONTGOMERY COUNTY COUNCIL
REGARDING BILL 11-23, THE SAFE STREETS ACT OF 2023**

March 21, 2023

President Glass, Vice President Friedson, and Members of the Council: My name is Richard Levine and I am testifying on behalf of the Locust Hill Citizens' Association. Locust Hill is a single-family community bounded by Cedar Lane on the south, Rockville Pike on the west and the arc of the Beltway from Rockville Pike around to Cedar Lane.

Most relevantly for the purpose of this hearing, the central portion of our community has many MCPS students, no sidewalks, and is a direct cut-through route, via Elmhirst Parkway, between Rockville Pike and Cedar Lane. We seek development of automated traffic enforcement of an existing no-left-turn restriction intended to ameliorate this safety hazard and believe such a solution would help protect other communities with turning and prohibited straight-across restrictions.

Because we read bill 11-23's proposed County Code section 31-9D, Automated Traffic Enforcement Action Plan, to have a county-wide focus that goes beyond priority downtown and town center areas, we believe there is an opportunity to further the goals of Vision Zero. Our ask of the Council is simple. Please amend section 31-9D to:

- Add to the list of situations to be included in the required enforcement planning process a new subsection (a)(1)(D), "at intersections with vehicle directional movement restrictions," and
- Move the "and" from after subsection (B) to after subsection (C).

Locust Hill's efforts to protect our residents from cut-through traffic have spanned many years. After public hearing, we obtained a no left-turn restriction from Elmhirst Parkway to Cedar Lane from 3-7 pm (except for school buses), and a no-right-turn restriction from Cedar Lane from 7-9 am. MC DOT also installed speed bumps along the cut-through route.

An additional promising remedy—or so we thought—was to work with MC DOT and the Stone Ridge School regarding installation of traffic control signals at the Cedar Lane intersection with Elmhirst Parkway and the Stone Ridge School entrance. These include illuminated no-left-turn and no-right-turn signs mounted on the signal arms.

But as we learned, County Police have not enforced these restrictions. For example, we were told, there is no easy "stake-out" area for police to lurk regarding left turns, and now it seems traffic enforcement is a lower staffing priority. But restrictions that are not enforced do not exist, except for those imbued with voluntary civic virtue. (A photo of illegal left-turning traffic is attached)

Residents asked, why don't we ask for installation of an enforcement camera. We had to respond that there was no such thing as a no-left-turn camera. But there could be and should be.

While the legislative findings in new subsection 31-9C(a) focus on pedestrian crashes *at* intersections, we believe that Vision Zero's effort to reduce pedestrian risks should also include automated enforcements efforts to reduce hazards created by vehicles *on their way to* intersections when those hazards are created by drivers' intentions to violate turn or cut-across restrictions once at the intersection.

We understand that no-left-turn software for county intersection cameras may not currently exist. But given recent advances in image detection and analysis, part of the Enforcement Action Plan should be to explore—and request—software and processing capabilities for that purpose. Potential deployment timelines might be included in the Plan.

We appreciate the Council's consideration of Locust Hill's perspective and hope you will direct the Executive to think expansively about the opportunities for Automated Traffic Enforcement to promote Vision Zero. We would be happy to interact with MC DOT in carrying out such an effort.

Exhibit

Left-Turning Traffic at Elmhirst Parkway and Cedar Lane

Bill 11-23, Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan (The Safe Streets Act of 2023)

March 21, 2023

Council President Glass and Council Members,

The Washington Area Bicyclist Association (WABA) supports Bill 11-23, the Safe Streets Act of 2023.

WABA is a nonprofit organization with 1,300 Maryland members. We empower people to ride bikes, build connections, and transform places. We envision a just and sustainable transportation system where walking, biking, and transit are the best ways to get around.

The Safe Streets Act advances Montgomery County toward meeting our Vision Zero commitment. We agree that progress has been made to reduce injuries and deaths on our roadways via sidewalk installations, dedicated bike lanes, automated traffic enforcement, and other traffic calming techniques. This Act will help us make further progress.

We appreciate a provision that may seem peripheral to some, the requirement that the County Executive provide an automated enforcement action plan. The County's Office of Legislative Oversight has found severe racial disparities in police traffic enforcement. The OLO's findings were reported in a 2020 report, *Local Policing Data and Best Practices*, with an October 2022 update via OLO Memorandum Report 2022-12. Automated enforcement is far less discriminatory than police stops.

We recommend a modification to the Act, that the Traffic Infrastructure Review provision cover all students going to or from school in Montgomery County, regardless of time, distance from school, mode, or road jurisdiction, as well as all collisions of any sort with a person in an established County school zone or on school property during arrival or dismissal. And please consider extending the Act to Suburban areas.

We look forward to Bill 11-23's enactment and implementation, and to working with you on steps beyond those covered by the bill.

What steps beyond?

The County Council and County Executive should encourage Montgomery County municipalities to adopt Safe Streets Act provisions themselves, covering municipally owned streets in their own downtown and town center areas and possibly their suburban areas, that is, provisions for Traffic Infrastructure Review, No Right Turn on Red, Leading Pedestrian Intervals at crossings, and creation of an Automated Traffic Enforcement Plan.

And beyond the Safe Streets Act, Montgomery County should lower speed limits county-wide, on arterials and in downtown and town center areas and specifically to 20 MPH on residential streets. Compare that effective July 1, 2020, the District of Columbia established a default speed limit of 20 mph for all local streets, residential streets that primarily serve neighborhood traffic.

Why lower speed limits?

According to the Federal Highway Administration, “a driver traveling at 30 miles per hour who hits a pedestrian has a 45 percent chance of killing or seriously injuring them. At 20 miles per hour, that percentage drops to 5 percent.” Similar fatality and serious-injury stats apply for bicyclists struck by a driver traveling at a higher versus a lower speed.

Maryland Transportation Code §21-803 allows alteration of maximum speed limits by local authorities but requires “performing an engineering and traffic investigation” for streets whose limit is to be lowered. The County should request a 2024 Maryland local bill or a state-wide bill to allow speed-limit reduction for an entire jurisdiction or area following creation of a jurisdiction- or area-wide complete-streets plan. Then the County should follow up with complete-streets plans and speed-limit reductions, with systematic reduction to 20 MPH on residential streets. This is the next step you can and should take, after enacting the Safe Streets Act of 2023, to advance Montgomery County toward Vision Zero.

Thank you for the opportunity to testify. The Washington Area Bicyclist Association supports Bill 11-23, the Safe Streets Act of 2023. We thank Council President Glass for developing this legislation and the nine County Council Member co-sponsors, and urge you to start now on further steps to realize Vision Zero in Montgomery County.

Seth Grimes, Maryland Organizer
Washington Area Bicyclist Association
seth.grimes@waba.org

Testimony on behalf of the County Executive Marc Elrich
Bill 11-23, Motor Vehicles and Traffic - Traffic Control Signals, Devices, and Enforcement
Action Plan

My name is Wade Holland, Vision Zero Coordinator for the County Government. Thank you for this opportunity to testify in support of Bill 11-23 on behalf of County Executive Marc Elrich. Bill 11-23 takes steps to improve pedestrian safety in our downtown and town center areas by expanding “No Turn on Red” restrictions and implementing “Leading Pedestrian Intervals” at signalized intersections. The bill also requires crash reviews in school zones and publishing an automated enforcement plan.

The County Executive supports the intent of all four of these initiatives as each is an element of our existing Vision Zero 2030 Action Plan. Executive agency staff looks forward to working with the Council on amendments to enhance the effectiveness of this legislation by requiring the development of an implementation plan for “No Turn on Red Restrictions” and “Leading Pedestrian Intervals,” encouraging more uniform implementation at County and State locations, and providing for waiver requirements at locations where it is determined that implementation will be counterproductive or alternative treatments may be a better fit for the context. The automated enforcement plan should reflect automated enforcement technologies approved for use by the State and County. Currently, stop sign monitoring systems are not permitted in Maryland and enabling legislation will not be passed in the legislature this year.

The County Executive thanks the Council for considering measures to improve roadway safety and advance Vision Zero on County roads through measures like those recommended in Bill 11-23.

To the Montgomery County Council:

I am writing to support Bill 11-23 - The Safe Streets Act of 2023.

The recommendations of this act would progress the urgent need to increase safety for vulnerable users of the Counties' road infrastructure and to progress the lagging progress of the Counties' Vision Zero goals.

Vehicles block crosswalks at intersections allowing for Right Turns on Red. Already vehicles are mostly yielding on red rather than making a full stop as required by law. Many of these infractions can be caught and enforced using automated traffic enforcement devices.

For too long, convenience and level of service for vehicles have normalized pedestrian injuries and death. We continue to excuse excess injuries and death to additional vehicular miles driven. As noted in the Counties p' Vision Zero Annual Report for 2020, a **20% increase** in injuries (from 202 to 241) is normalized/excused by additional miles driven. See below for the highlighted quote from the Vision Zero FY2022 Annual Report:

"Serious and fatal crashes increased from 202 in 2020 to 241 in 2021,¹ but was 15% below the 2015-2019 average. **Much of the year-over-year increase, particularly for serious injury crashes, was due to a 9% increase in vehicle miles traveled** as people returned to the road after COVID- 19 related shutdowns. (from the Vision Zero FY2022 Annual Report).

We need to do better.

We remember Jake Cassells 17, Dr Ned Gaylin 81, Jennifer DiMauro 31, Eric Frank Grosse Jr. 71, Enzo Marcel Alvarenga 18, and recently Sarah Langenkamp 41.

Best regards,

Warren Chan

March 19, 2023

Councilmember Glass,

With regard to Bill 11-23, in this section, can the word “student” be made more generic, maybe “person”, and eliminate the need to be going to or from school? I walk my kids to school and I would hope that even if I, an adult, was hit in a school zone during this timeframe, that an infrastructure review would be forced too. Limiting this to only students misses other uses and people in the same area that need the same protections from car/truck/bus traffic.

31-9a

c. Traffic infrastructure review within a school zone - required. The Department of Transportation must coordinate with the Montgomery County Public School to conduct a traffic infrastructure review of each collision that:

- (1) occurs on a County road;
- (2) involves a **student** going to or from school; and
- (3) occurs in a designated school zone or on school property during arrival or dismissal times.

Regards,
Steve Ashurst

March 17, 2023

The Honorable Evan Glass

President, Montgomery County Council
Council Office Building
100 Maryland Avenue
Rockville, Maryland 20850

Re: Planning Board Comments Regarding Bill 11-23

Dear President Glass:

At its March 16, 2023, meeting the Montgomery County Planning Board discussed Bill 11-23, draft legislation that aims to “advance the County’s Vision Zero goals by eliminating serious and fatal crashes through... prioritizing student safety in school zones, providing more access for pedestrians in a crosswalk, prohibiting a right turn on red, and requiring a plan for increased automated traffic enforcement.” The Planning Board supports this essential legislation because it advances the goals of Vision Zero and the ongoing Pedestrian Master Plan. The Board voted 3:0 (Chair Zyontz and Commissioner Pedoeem absent) to transmit the following comments to improve this already strong legislation. Also included are potential text revisions to the bill to address these comments:

1. Expand the scope of the traffic infrastructure review effort.

This legislation requires a traffic infrastructure review if a collision involves a student along a county road in a designated school zone (or on school property). The Board noted that, in addition to students, school employees, parents, and visitors traveling to and from schools are also potentially vulnerable to collisions in a school zone or on a school property. While addressing the engineering factors that lead to student-involved collisions is essential, collisions in these areas that do not involve students could be caused by deficiencies that may lead to student-involved collisions in the future. To that end, in the proactive spirit of Vision Zero and acknowledging the wider school community who travel through these areas, the Board recommends language limiting the applicability of the traffic infrastructure reviews to those crashes that include students be removed from the legislation.

2. Provide MCDOT flexibility in implementing No Turn on Red (NTOR) and Leading Pedestrian Intervals (LPI).

As written, the legislation requires MCDOT to implement NTOR and LPIs without exception. However, there may be situations where it may not be in the interest of public safety to add NTOR and LPIs. Under certain circumstances, MCDOT could find another treatment, such as a Lagging Pedestrian Interval or a Leading Through Interval, to be a superior safety improvement at a specific intersection. While NTOR and LPI should be the default, MCDOT should have the discretion to make other intersection changes that improve traffic safety. For locations where NTOR and LPIs are found to be inappropriate or inadequate, a rationale should be shared publicly. To address this issue, the proposed legislation could be rewritten as indicated below.

3. Clarify that the NTOR and LPI provisions of the legislation apply only to county-controlled signalized intersections.

Additional clarity is needed to specify where NTOR restrictions and LPIs must be installed. As written, the bill states:

(c) Signage - required. The Department must erect signage that indicates “No Right Turn on Red” at the intersection of a County road located: (1) in a downtown area; and (2) in a town center area

(e) Leading pedestrian interval – required. The Director must install or cause to be installed a leading pedestrian interval at every crosswalk of a County road located: (1) in a downtown area; and (2) in a town center area.

However, the County government does not have control over the signalization or signage of intersections involving state highways (including intersections with County roads). Additionally, NTOR restrictions and LPIs are not possible at unsignalized intersections, like those that are stop sign-controlled. To clarify the applicability of this provision, the legislation could be rewritten as indicated below.

4. Convene a working group to advance implementation of NTOR restrictions and LPIs at state-controlled signalized intersections.

While implementing NTOR and LPIs at county-controlled signalized intersections will be a substantial improvement for pedestrian safety, state-controlled signalized intersections are where these pedestrian safety improvements would have the largest benefits, as these locations tend to have the highest volumes of motor vehicles and pedestrians.

As a next step, a working group could be convened including MCDOT and the Maryland Department of Transportation State Highway Administration to explore opportunities for implementing similar NTOR restrictions and LPI at state-controlled signalized intersections.

5. Expand the legislation to require LPIs at major pedestrian generators outside Downtowns and Town Centers.

Intersections around schools, parks, transit stations, and community centers were highlighted as opportunity sites for LPIs through data collection and public engagement around the Pedestrian Master Plan developed by the Planning Department. While Downtowns and Town Centers are large nodes of pedestrian activity, schools, parks, community centers and transit stations outside of Downtowns and Town Centers are also areas of high pedestrian activity. The Board recommends the LPI requirement also apply to these areas; the legislation could be rewritten as indicated below.

Potential Legislative Language Changes to Address Comments

These references in the draft legislation could be rewritten as follows to address the comments above:

31-9A. (e) Traffic infrastructure review within a school zone – required. The Department of Transportation must coordinate with the Montgomery County Public School to conduct a traffic infrastructure review of each collision that:

(1) occurs on a County road; and

[(2) involves a student going to or from school; and]]

[(3)] (2) Occurs in a designated school zone or on school property during arrival or dismissal times.

* * *

31-9C. (c) Signage – required. The Department must erect signage that indicates “No Right Turn on Red” at the intersection of [[a]] County-controlled signalized intersections [[road]] located: (1) in a downtown area; and (2) in a town center area.

* * *

(e) Leading pedestrian interval – required. The Director must install or cause to be installed a leading pedestrian interval at every crosswalk of [[a]] County-controlled signalized intersections [[road]] located: (1) in a downtown area; and (2) in a town center area; and (3) within one block of a school, park, rail or bus rapid transit stations, or community center frontage.

* * *

(f) The requirements of subsection (c) or (e) do not apply at an intersection if the Director concludes that they would significantly impair public safety. Within one year of {effective date of the bill}, the Director shall forward a report to the County Council documenting the rationale for not proceeding with installation of “No Turn on Red” signage or a leading pedestrian interval at specific locations. This document must be updated and resubmitted to the County Council annually to account for changing circumstances.

Thank you for the opportunity to provide comments on Bill 11-23, which takes significant steps to implement several key actions of the Pedestrian Master Plan Public Hearing Draft, including Key Actions P-2c (LPis), P-2d (No Turn on Red), and P-8a (Increase Automated Enforcement). The Planning Board and Planning Department staff look forward to discussing Pedestrian Master Plan recommendations with the Council in the coming months and supporting efforts to implement the many key actions identified in the Plan. If you have any questions or comments, please contact Eli Glazier, project manager for the Pedestrian Master Plan, at 301-495-4548.

Sincerely,

Roberto Piñero

Racial Equity and Social Justice (RESJ) Impact Statement

Office of Legislative Oversight

BILL 11-23: MOTOR VEHICLES AND TRAFFIC – TRAFFIC SIGNALS, DEVICES, AND ENFORCEMENT ACTION PLAN

SUMMARY

The Office of Legislative Oversight (OLO) finds the racial equity and social justice (RESJ) impact of Bill 11-23 is indeterminant. While Black, Indigenous, and Other People of Color (BIPOC) Montgomery County Public Schools (MCPS) student pedestrians could disproportionately benefit from traffic improvement recommendations of infrastructure reviews, it is unclear how these recommendations will translate into investments for affected school zones. Further, it is unclear the extent to which BIPOC constituents will be the primary beneficiaries of proposed traffic safety investments in downtown and town center areas, and the pending automated traffic enforcement plan.

PURPOSE OF RESJ IMPACT STATEMENTS

The purpose of RESJ impact statements (RESJIS) is to evaluate the anticipated impact of legislation on racial equity and social justice in the County. Racial equity and social justice refer to a **process** that focuses on centering the needs, leadership, and power of communities of color and low-income communities with a **goal** of eliminating racial and social inequities.¹ Achieving racial equity and social justice usually requires seeing, thinking, and working differently to address the racial and social harms that have caused racial and social inequities.²

PURPOSE OF BILL 11-23

Vision Zero is a strategy for eliminating all traffic fatalities and severe injuries, while increasing safe, healthy, and equitable mobility for all. Since its inception in Europe in the 1990s, a growing number of jurisdictions in the United States have adopted Vision Zero action plans.³ Montgomery County adopted its own action plan in 2016 and outlines the following goals:

Using data-informed and equitable approaches, Montgomery County will systematically update the roadway network to create complete, safe streets and build a culture of safety through purposeful campaigns and engagement to eliminate serious and fatal collisions by 2030.⁴

Bill 11-23, The Safe Streets Act of 2023, proposes the following actions to advance the County's Vision Zero goals:⁵

- require an infrastructure review for pedestrian-related collisions within a County's school zone;
- prohibit a driver of a motor vehicle from making a right turn on a red at certain intersections;
- require certain traffic control devices at crosswalks in the County's downtown and town center areas;⁶
- require the County Executive to provide an automated traffic enforcement plan; and
- generally amend the law regarding motor vehicles and traffic control.

RESJ Impact Statement

Bill 11-23

Bill 11-23, Motor Vehicles and Traffic – Traffic Signals, Devices, and Automated Enforcement Plan, was introduced by the Council on February 28, 2023.

In August 2022, OLO published a RESJIS for Bill 24-22, Streets and Roads. Please refer to this RESJIS for more background on transportation infrastructure and racial equity.⁷

VISION ZERO AND RACIAL EQUITY

Racial equity is a central component of the Vision Zero movement. As explained by the Vision Zero Network:

In order to transform broken systems into safe systems, Vision Zero efforts must recognize that many communities have been systemically discriminated against in transportation practices, and that not all communities are starting from the same place, in terms of traffic safety investments and practices. And, specifically, the harms caused by racial bias in policing showcase the urgent need to improve upon the traditional approach to traffic safety. As advocates for safe mobility, we must work hard to ensure that Vision Zero efforts improve – not exacerbate – negative, unintended consequences, particularly in communities of color and low-income communities.⁸

The network proposes three broad strategies for integrating equity in Vision Zero: rethinking the role of enforcement; investing where needs are greatest; and engaging the community.⁹

Historically inequitable policies and practices in transportation infrastructure have fostered disparities in traffic-related injuries by race and ethnicity. Researchers note that unsafe street infrastructure conducive to traffic accidents – such as inadequate sidewalks and crosswalks, and major arterial roads that prioritize speed and car volume over pedestrian safety – often characterize low-income communities.¹⁰ Racial and ethnic differences in the social determinants of health have also been cited as drivers of racial disparities in traffic-related injuries.¹¹ National data on traffic injury shows that:

- Indigenous and Black Americans have the highest rate of traffic deaths at 145.6 and 68.5 per 100,000, followed by White (55.2 per 100,000), Latinx (46.9 per 100,000) and Asian (15.3 per 100,000) Americans.¹²
- Black cyclists have per mile fatality rates four times higher than White cyclists, and Latinx cyclists have per mile fatality rates 70 percent higher than White cyclists.¹³
- For motorcycle crashes, Black victims were 1.5 times more likely to die from their injuries than similarly injured White victims, even though they were 30 percent more likely to have been wearing helmets.¹⁴
- Black and Indigenous Americans have pedestrian deaths two to three times higher than White Americans. Further, the lower the income of the census tract, the more likely a person is to be struck and killed while walking.¹⁵

Available local data also demonstrates disparities in traffic injuries by race and ethnicity:

- Between 2011 and 2015, Latinx pedestrians were most likely to be killed in a traffic incident (2.9 per 100,000) followed by Black pedestrians (1.6 per 100,000) and White pedestrians (0.9 per 100,000).¹⁶

RESJ Impact Statement

Bill 11-23

- Between 2011 and 2015, Black vehicle occupants were most likely to be killed in a traffic accident (4.3 per 100,000) followed by White vehicle occupants (3.4 per 100,000) and Latinx vehicle occupants (3.2 per 100,000).¹⁷
- Local communities in Montgomery County with higher rates of poverty, persons of color, and younger residents have higher collision rates compared to the rest of the County.¹⁸

ANTICIPATED RESJ IMPACTS

To consider the anticipated impact of Bill 11-23 on RESJ in the County, OLO recommends the consideration of two related questions:

- Who are the primary beneficiaries of this bill?
- What racial and social inequities could passage of this bill weaken or strengthen?

For the first question, OLO identified several stakeholders that would be impacted by this Bill:

- **MCPS student pedestrians, as well as parents, staff, and other pedestrian stakeholders** could benefit from traffic improvement recommendations in County school zones leading from infrastructure reviews of collisions involving student pedestrians going to and from school. This change could disproportionately benefit BIPOC student pedestrians, as they are likely overrepresented in schools located in areas of the County with higher collision rates and pedestrian crashes (Appendix, Figure 1).¹⁹
- **Constituents residing in downtown and town center areas** could benefit from increased safety through the implementation of right turn restrictions at intersections and the installation of traffic control devices at crosswalks. It is uncertain the extent to which downtown and town center areas overlap with areas of the County where BIPOC or White residents are overrepresented; thus, there is insufficient information to determine if there could be disproportionalities by race and ethnicity among constituents residing in these areas.
- **Constituents and other stakeholders using County roads** could benefit from increased safety through the development of an automated traffic enforcement plan for the County. Since the plan is pending completion, there is insufficient information to determine who the primary beneficiaries will be and if there could be disproportionalities by race and ethnicity among them.

For the second question, OLO considered the effect this Bill could have on reducing transportation inequities in the County. While BIPOC MCPS student pedestrians could disproportionately benefit from traffic improvement recommendations of infrastructure reviews, it is unclear how these recommendations will translate into traffic safety investments for affected school zones. Further, it is unclear the extent to which BIPOC constituents will be the primary beneficiaries of proposed traffic safety investments in downtown and town center areas, and the pending automated traffic enforcement plan.

Taken together, OLO finds the RESJ impact of Bill 11-23 is indeterminant.

RESJ Impact Statement

Bill 11-23

RECOMMENDED AMENDMENTS

The Racial Equity and Social Justice Act requires OLO to consider whether recommended amendments to bills aimed at narrowing racial and social inequities are warranted in developing RESJ impact statements.²⁰ OLO finds the RESJ impact of Bill 11-23 is indeterminant. As such, OLO does not offer recommended amendments.

CAVEATS

Two caveats to this racial equity and social justice impact statement should be noted. First, predicting the impact of legislation on racial equity and social justice is a challenging analytical endeavor due to data limitations, uncertainty, and other factors. Second, this RESJ impact statement is intended to inform the legislative process rather than determine whether the Council should enact legislation. Thus, any conclusion made in this statement does not represent OLO's endorsement of, or objection to, the bill under consideration.

CONTRIBUTIONS

OLO staffer Janmarie Peña, Performance Management and Data Analyst, drafted this RESJ impact statement.
