# RECYCLING MADE EASY

*in your apartment or  
condominium*

DEPARTMENT OF  
ENVIRONMENTAL  
PROTECTION  
MONTGOMERY COUNTY - MARYLAND

**TRRAC**   
Think Reduce and Recycle at Apartments and Condominiums

## Reduce and Reuse

Find ways to reduce the amount of waste generated and disposed of as trash when you shop, work, and play. Take a closer look at what you buy, where you buy it, how you buy it (when possible, use reusable bags!), how well you use it, and what you do with it when you no longer need it (donate!). Not only will you conserve natural resources, but you will save money and contribute to the County’s goal to reduce waste and recycle more, aiming for zero waste!

## Recycle

Montgomery County requires everyone to recycle commingled materials, mixed paper, scrap metal, yard trim, and Christmas trees. Each multi-family property in the County must also have on-site recycling programs for these materials. Apartment-sized recycling bins are available to help you collect and transport recyclable materials to the recycling collection area at your property. Note: plastic bags, film, or shrink wrap can be taken back to most local grocery stores for recycling. These should not be placed in your property’s recycling containers.

## Close the Loop!

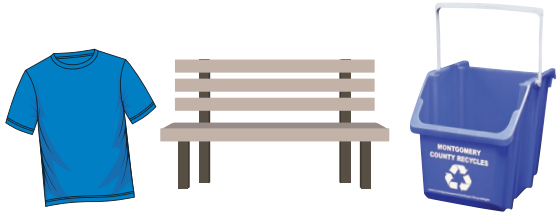

When shopping, purchase items made from recycled materials or wrapped in recycled packaging. Look for the “made with recycled content” symbol. When you buy recycled products, you help make Montgomery County’s recycling program a success by creating demand for recycled materials.

## Why Recycle?

We all have a responsibility to use our resources wisely. Recycling conserves energy, saves precious natural resources, reduces pollution, and reduces the amount of trash sent to County disposal facilities. By recycling, you contribute to a cleaner, healthier environment and a more sustainable economy. **And, recycling is the law in Montgomery County.**

## Did you know...

- The energy saved by recycling one aluminum can will power a television for three hours. Manufacturing aluminum cans with recycled aluminum uses 95 percent less energy than manufacturing using virgin ore.
- Recycling one ton (2,000 lbs) of paper saves 17 trees. Most cereal boxes are made of 100 percent recycled paper.
- Glass and metals such as steel and aluminum never wear out — they can be remanufactured into new products as many times as they are recycled. The typical glass container has up to 70 percent recycled glass.
- Plastics are petroleum-based, so recycling conserves oil. It can be made into playground equipment, t-shirts, sleeping bags, park benches, backyard decks, picnic tables, lawn furniture, and recycling bins.

## KEEP THESE OUT

- Broken glass, mirrors, or windows
- Drinking glasses, cups, plates, or cookware
- Ceramics or light bulbs
- Automotive parts
- Metal items such as pots, pans, or furniture
- Styrofoam™/polystyrene products (#6 plastics)
- Plastic utensils, bowls, or plates
- Automotive product containers including motor oil, antifreeze, and brake fluid
- Pesticide containers
- Plastic bags, film and shrink wrap
- Medical waste (e.g. syringes, masks, needles)
- Batteries (rechargeable and non-rechargeable)
- Biodegradable or compostable items (place these in your compost bin if your property has a composting collection service)

- Vehicle or automotive parts, including engine blocks
- Paint cans
- Oxygen or propane tanks or other containers under pressure

- Ask your property manager how scrap metal is collected and recycled at your property. Do not place scrap metal in mixed paper or commingled recycling bins.
- If you purchase a new appliance, ask the store if they will remove and recycle the old appliance.

- Trees with root balls
- Trees in plastic bags
