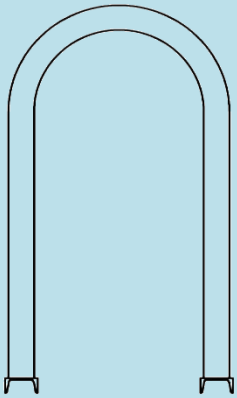
2015 MONTGOMERY COUNTY BIKE RACK FACTS

RACK INFORMATION



These are a few photos of the general type of bike racks that cyclists like. Not all bike racks function well; the inverted “U” style is preferred.

- Bike racks should be placed under cover for weather protection.
- Bikes need two points of contact to hold them stable and to enable locking of frame and front wheel.
- Racks need to be placed in highly visible, well-lighted locations near building entrances.
- Each “U” rack holds 2 bikes.

INSTALLATION INFORMATION

- Pedestrian and ADA thoroughfare should be considered in rack placement.
- For specific bicycle parking requirements (updated Oct 30, 2014), refer to Chapter 59 Montgomery County Zoning Ordinance, Article 59-6, Section 6.2.4
- For bicycle parking design standards, refer to Chapter 59 Montgomery County Zoning Ordinance, Article 59-6, Section 6.2.6.
