

Acquisition

12 lead EKG's **must** be acquired on all patients over the age of 35 who present with:

- Chest discomfort, non-traumatic;
- Dyspnea, not *obviously* explained by pulmonary cause (asthma, croup, etc.);
- Syncope;
- Any of these unexplained symptoms:
 - Profuse diaphoresis,
 - Arm, shoulder, neck, or jaw pain,
 - Profound nausea/vomiting, or
 - Dizziness/vertigo;

And on:

- Any patient, regardless of age, in whom the ALS provider suspects a possible cardiac component; or
- Any patient who has chest pain/discomfort due to suspected illicit drug usage (cocaine, stimulants, etc.)

- Any patient who has chest pain/discomfort due to suspected illicit drug usage (cocaine, stimulants, etc.)

Transmission

12 Lead EKG's **must** be transmitted to the receiving hospital when they display these criteria:

- STEMI interpretation by machine;
- STEMI interpretation by ALS provider, regardless of machine interpretation;
- New or presumed new LBBB; or
- Any abnormal EKG necessitating further assessment.

How to transmit:

- Acquire 12 LEAD
- Assure the modem is plugged into the Lifepak
- Hit "Transmit" button
- Choose appropriate receiving hospital
- Hit "Send"
