

# EMIHS 5-minute Lineup Drill

## Role of the unit officer: ALS to BLS Downgrades

Ensures the process happens

- Did your crew have physical or visual contact with a patient dispatched ALS?
- Did the medic engage by appropriately assessing and taking a history?
- Was there a downgrade timeout where ALS and BLS talked and completed the checklist together?

Does the process and makes a good clinical decision

- Did you engage with the patient and perform an assessment?
- Did you perform a timeout with the BLS crew and complete the checklist?
- Does the patient meet the checklist criteria favoring ALS transport?
- If so, do you still want to downgrade?
