

# EMIHS 5-minute Lineup Drill

## Auto-Generated Narratives are not a 1-click solution

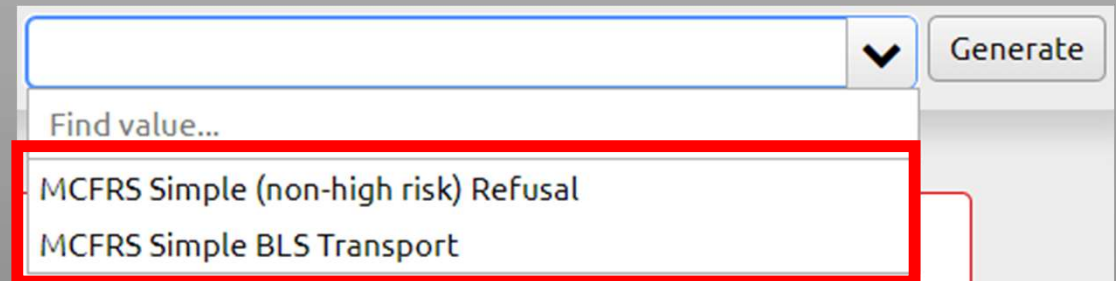

- ❑ Achieve a validation score of 100 *before* generating the auto-narrative.

- ❑ Only document *pertinent* negatives in your assessment, avoid the “all normal” button

- ❑ Ensure you choose the correct option before selecting “Generate.”

- ❑ Make sure to review the generated narrative and ensure its completeness. Be sure it includes a detailed and accurate description of patient and scene conditions.

Most importantly, Will it make sense to someone else?
