

HEALTHY MONTGOMERY CORE MEASURES SET

MONTGOMERY COUNTY AND ITS SIX MONTGOMERY COUNTY HOSPITAL COMMUNITY BENEFIT SERVICE AREAS

2008-2012 THROUGH 2010-2014 RESULTS

PREPARED BY THE PLANNING AND EPIDEMIOLOGY PROGRAM, PUBLIC HEALTH SERVICES,
MONTGOMERY COUNTY DEPARTMENT OF HEALTH AND HUMAN SERVICES.

MAY 2016

Figure A. Data Sources revisited since inaugural 2009-2010 Development of Healthy Montgomery Community Indicators:

- **Maryland Youth Tobacco and Risk Behavior Survey (YTRBS)** (formerly the Maryland Youth Tobacco Survey and Maryland Youth Risk Behavior Survey)
- **Maryland DHMH Vital Statistics Administration Birth Records.** Revised birth certificate in 2010 (new prenatal and birth characteristics).
- **Maryland Behavioral Risk Factor Surveillance System (MD BRFSS).** Revisit validity and reliance on MD BRFSS for representative County estimates.
- **American Community Survey (ACS) and other related U.S. Census Bureau products.** ACS releases with additional subpopulations, sub-county geographies and social determinants of health metrics.

BACKGROUND

In May 2013, the Healthy Montgomery Steering Committee approved the reconvening of the Healthy Montgomery Data Project Team to accomplish the following:

Review and establish indicator selection criteria for 2013 process;

- Using established criteria, conduct a review of the existing indicators on Healthy Montgomery, identifying any indicators that are no longer a high-priority for inclusion going forward (proposed deletions);
- Conduct a review of new community indicators/data sources that became available since the 2009-2010 selection process that should be considered for inclusion for the 2014 needs assessment (proposed additions); and
- Draft and submit a candidate set of indicators for review and consideration by the Healthy Montgomery Steering Committee by December 2013.

In July 2013 the Healthy Montgomery Data Project Team convened its multi-sectoral collaborative of local data experts¹ and began its process to evaluate all Healthy Montgomery (HM) Community Dashboard Indicators available on the www.HealthyMontgomery.org website, scan all new/updated indicators that became available since the 2009-2010 process (See Figure A) that established the HM Community Dashboard Indicators, and ultimately identify an updated set of community indicators, which included the establishment of the Healthy Montgomery Core Measures Set.

HM CORE MEASURES SET

At the conclusion of its process, the HM Data Project Team identified 37 measures that accomplished the following:

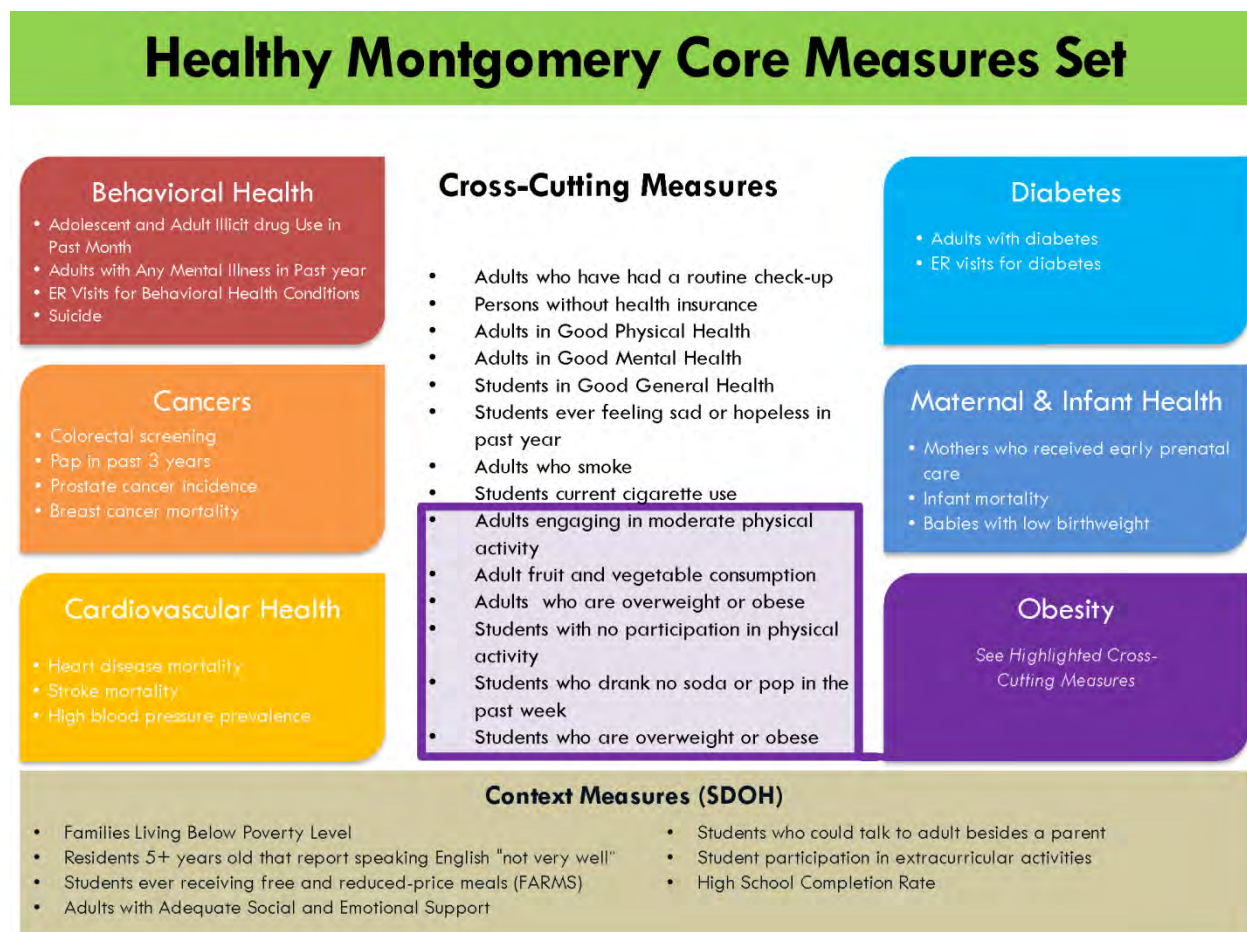

- Represented the six priority areas identified in the 2011 HM Priority Setting process, provided a distinct set of cross-cutting measures within the HM Core Measures Set that supported more than one priority area, and included measures that captured key social determinants of health in Montgomery County;
- Aligned with Montgomery County's 6 not-for-profit hospital's individual Community Health Needs Assessments (CHNAs) and related Implementation Plans (IPs);

¹ Membership for the 2013-2014 Data Project Team is provided at: www.healthymontgomery.org

- Illustrated areas where Montgomery County both needs to make improvements and there are actionable strategies within our community sectors to achieve positive impacts;
- Highlighted areas where there are known disparities and/or inequities that can be reduced or eliminated; and
- Included metrics that are part of the Maryland State Health Improvement Process (MD SHIP), Robert Wood Johnson's County Health Rankings (RWJF CHR), and the national Healthy People 2020 benchmarks (HP2020).

Please visit www.healthymontgomery.org to see all 37 HM core measures in detail. This online resource provides detailed documentation on each measure as well as the most recent data for subgroup comparisons and benchmarking to state and federal efforts (MD SHIP, HP2020).

FIGURE B. HEALTHY MONTGOMERY CORE MEASURES SET

COMPILING HEALTHY CORE MEASURES FROM SECONDARY SOURCES TO CREATE CBSA ESTIMATES

HHS does not process all data used to compile the Healthy Montgomery Core Measures. Reasons for this include the data are already processed and publicly available for use at the lowest disaggregated level of detail/geography available below the county level; there are no data collected and subsequently reported below the county level to process further; or HHS does not yet have the methodology in place to process datasets at or below the county level. Details for each category, and the core measures within each circumstance, are provided below.

There are datasets already available that compile results that provide one or more county sub-geographies for hospitals to use like zip code, zip code tabulation areas (ZCTAs), census tracts, public use meta-analysis areas (PUMAs), or other sub-county geography (i.e. school enrollment areas).

- **U.S. Census Bureau, American Community Survey results via FactFinder (ACS)**
 - Families living below poverty level
 - Residents aged 5 years and older that report speaking English “not very well”
 - High school completion rate
 - Persons without health insurance

Other HM core measures come from data sets that are not available to HHS and/or cannot support processing results below the County level which is needed to compile results for identified zip codes in each hospital community benefit service area (CBSA). Methods for compiling small area estimations for sub-county areas are under consideration and will be developed where appropriate.

- **National Institutes for Health, Surveillance, Epidemiology, and End Results (SEER) Program of the National Cancer Institute (NCI-SEER)**
 - Prostate cancer incidence
- **Maryland Behavioral Risk Factor Surveillance System (MD BRFSS)**
 - Colorectal cancer screening (fecal occult blood test and/or colonoscopy/sigmoidoscopy) in the past two years among adults 50 years and older
 - High blood pressure prevalence reported by adults 18 years and older
 - Adults 18 years and older that report ever being diagnosed with diabetes
 - Adults 18 years and older that report seeing a doctor within the past two years
 - Adults 18 years and older that report 2 or fewer poor physical health days in the past month
 - Adults 18 years and older that report 2 or fewer mental health days in the past month
 - Adults 18 years and older that report having 100 or more cigarettes in their lifetime and currently smoke
 - Adults 18 years and older that report engaging in moderate physical activity
 - Adults 18 years and older that report eating five or more servings daily of fruits and vegetables

- Adults 18 years and older that report height and weight that results in an overweight or obese weight status
- Adults 18 years and older that report usually or always getting the emotional and social support needed
- **U.S. Substance Abuse and Mental Health Services Administration, National Survey on Drug Use and Health (NSDUH)**
 - Adolescents and adults aged 12 years and older that report any illicit drug use in the past month
 - Adults 18 years and older that report having at least one major depressive episode in the past year
- **MCPS Schools at a Glance (MCPS SAG)**
 - Percent of students who currently receive free and reduced price meals (FARMS) program

The last set of HM core measures are those with data source that HHS can acquire datasets, but that methods for processing sub-county estimates from these secondary sources are not yet established. For YRBS (also referred to as the YTRBS), we expect to have custom reports at the county level in 2016, and will explore small area estimation methods that align with its survey methodology to possibly acquire sub-county results.

- **Maryland Department of Health and Mental Hygiene, Youth Tobacco and Risk Behavior Survey (YTRBS)**
 - High school students that report being in good general health
 - High school students that report ever feeling sad or hopeless in the past year
 - High school students who smoked cigarettes on one or more of the past 30 days
 - High school students that report no participation in physical activity
 - High school students that report not drinking soda or pop in the past week
 - High school students that report height and weight that results in an overweight or obese weight status
 - High school students that report they would feel comfortable seeking help from one or more adults besides their parents if they had an important question affecting their life
 - High school students that report participating in any extracurricular activities at school such as sports, band, drama, clubs, or student government

To assist our community in acquiring the results for these measures that are not from sources that are processed by HHS, Table 2 lists each measure and provides the best link online to acquire the results. Please also visit www.healthymontgomery.org as well for additional information including comparisons to benchmarks (MD SHIP, HP2020).

HM CORE MEASURES ANALYZED BY MONTGOMERY COUNTY DEPARTMENT OF HEALTH AND HUMAN SERVICES (DHHS) FOR EACH HOSPITAL COMMUNITY BENEFIT SERVICE AREA (CBSA).

The results in this report capture measures from the following key data sources obtained, processed, and analyzed by HHS:

- Maryland Department of Health and Mental Hygiene (DHMH), Vital Statistics Administration Annual Birth Files, Montgomery County (**VSA Births**);
- Maryland Department of Health and Mental Hygiene (DHMH), Vital Statistics Administration Annual Death Files, Montgomery County (**VSA Deaths**);
- Maryland Healthcare Services and Costs Review Commission annual inpatient discharges (**HSCRC Inpatient**);² and
- Maryland Healthcare Services and Costs Review Commission annual emergency room outpatient discharges (**HSCRC ER**).

TABLE 1. HM CORE MEASURES PROCESSED BY MONTGOMERY COUNTY DEPARTMENT OF HEALTH AND HUMAN SERVICES.

Priority Area	Source	Measure
Behavioral Health	VSA Deaths	Age-adjusted suicide rate
Behavioral Health	HSCRC ER	Age-adjusted behavioral health(mental health and substance abuse)-related ER visit rate <i>a. Age-adjusted mental health-related ER visit rate</i> <i>b. Age-adjusted substance abuse-related ER visit rate</i>
Cancers	VSA Deaths	Age-adjusted female breast cancer mortality rate
Cardiovascular Health	VSA Deaths	Age-adjusted heart disease mortality rate
Cardiovascular Health	VSA Deaths	Age-adjusted stroke mortality rate
Diabetes	HSCRC ER	Age-adjusted diabetes (primary diagnosis)-related ER visit rate <i>a. Age-adjusted short-term diabetes complications (primary diagnosis)-related ER visit rate</i> <i>b. Age-adjusted long-term diabetes complications diabetes (primary diagnosis)-related ER visit rate</i> <i>c. Age-adjusted uncontrolled diabetes (primary diagnosis)-related ER visit rate</i> <i>d. Age-adjusted diabetes without mention of complications (primary diagnosis)-related ER visit rate</i>
Maternal and Infant Health	VSA Births	Percent of births to mothers that received first trimester prenatal care

² Please note that none of the current HM Core Measures are derived from this source. Future measures or proxy measures to current measures may be derived from this source moving forward in Local Profiles, including but not limited to the Agency for Healthcare, Research and Quality (AHRQ) Prevention Quality Indicator (PQI) measures set.

Maternal and Infant Health	VSA Deaths	Infant mortality rate (deaths per 1,000 live births)
Maternal and Infant Health	VSA Births	Percent of births with low birthweight

METHODS FOR COMPILING CBSA RESULTS

In the Fall of 2014, HHS requested each hospital to provide their primary and secondary service areas as defined by HSCRC using the zip codes of the residents that sought services through 2013. Combining the primary and secondary services derived a standard reporting area for each hospital known as the community benefit services area (CBSA)

The list of residential zip codes provided by each hospital is provided in Table 1. They include residential zip codes within Montgomery County, outside Montgomery County (elsewhere in Maryland or District of Columbia), and a third category of zip codes that were submitted as part of each hospital's CBSA but was determined to be a non-residential zip code and thus excluded from the analysis.³

This report is based on 2006-2014 births, 2006-2014 deaths, and 2008-2013 emergency room visits data sets to enable compilation of events by zip codes. Metrics based on births and deaths were only compiled for Montgomery County-based zip codes as other jurisdictions in Maryland and the District of Columbia are not provided in the files received by HHS from DHMH.

In order to compile rates for mortality- and emergency room visits-related metrics, detailed population files that described residents through zip code, gender, race, Hispanic Origin, and age were needed for Maryland and District of Columbia zip codes used by the hospitals.

HHS compiled zip code tabulation area (ZCTA) level population files from the U.S. Census Bureau's American Community Survey 5-year files for 2008-2012, 2009-2013, and 2010-2014 to use in the analysis of HM Core Measures.

During the initial CBSA report development in 2015, DHMH revised its Maryland State Health Improvement Process (MD SHIP) metrics. When the Fall 2015 report was completed, determinations had not been made by Healthy Montgomery to retain the MD SHIP definitions for its measures or use alternative national standardized metrics. As a result, HHS provided results from MD SHIP and Healthy Montgomery for the same topic. Specifically, diabetes and BH emergency room visits had two sets of metrics results- the HM- or Healthy Montgomery defined metrics and then the MD SHIP – or Maryland SHIP defined metrics.

In this 2016 edition, determinations on MD SHIP and Healthy Montgomery definitions and their differences have been made. For **diabetes-related ER visits**, this report includes the MD SHIP

³ The maps of the included residential zip codes for each hospital CBSA are being compiled by HHS and when completed will be added as Figures C through I (6 hospitals + county overall maps).

diabetes measure as the HM core measure for diabetes-related ER visits since it includes only ER visits where diabetes was listed as the primary diagnosis. HM further details in its results the extent to which the diabetes related ER visit related to: 1) short-term diabetes-related complications, 2) long-term diabetes-related complications, 3) uncontrolled diabetes-related complications, and 4) diabetes without mention of complications.

The 2016 report also includes different definitions from the Fall 2015 inaugural report for **behavioral health-related ER visits**. MD SHIP tracks ER visits where mental health or substance abuse is listed as any diagnosis in the encounter but Healthy Montgomery tracks only those encounters that list mental health or substance abuse as the primary or secondary diagnosis only. For mental health related ER visits, Healthy Montgomery also includes encounters with mental health diagnoses that are captured using e-codes (supplemental codes that capture an external cause of injury or poisoning, intent of injury/poisoning, and/or the place where event occurred). MD SHIP discontinued its use of the broader behavioral health related ER visits measure with the MDSHIP 2107 release. For MD SHIP 2017, mental health and substance abuse-related ER visits are two separate measures. Healthy Montgomery compiles the broad behavioral health-related ER visits, as well as the two components separately- mental health and substance abuse.

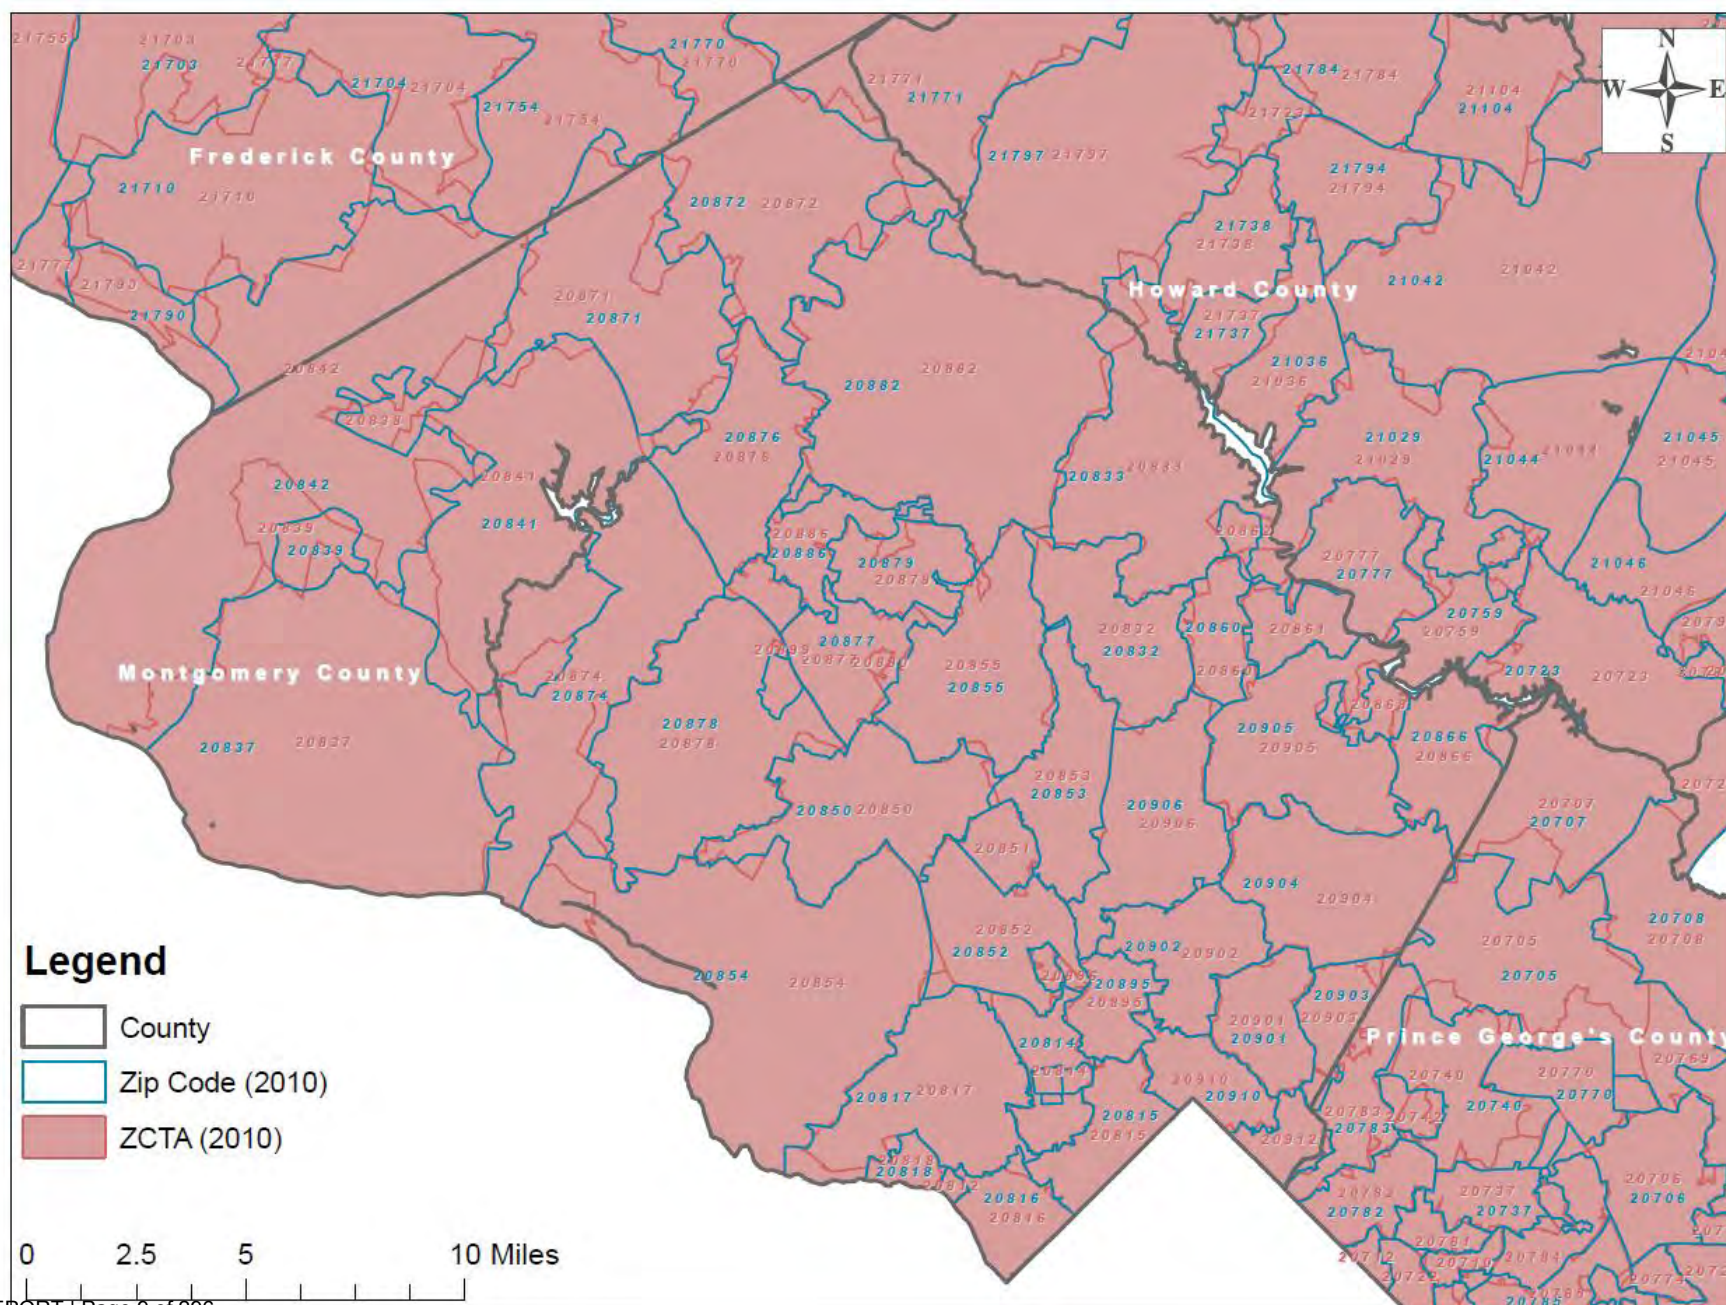

One last difference in the results from 2015 to 2016 is related to the completeness of the codes in the HSCRC utilization files. In the 2015 release, incomplete diagnosis codes missing fourth or fifth digits of the ICD diagnosis codes or containing a fourth or fifth digit code that were erroneous were omitted from the analysis. In this 2016 report, these encounters are included in the 2016 analysis since it was determined that the diagnosis is adequately defined in the first three digits of the diagnosis code. The expansion of allowable codes has resulted in some 2015 results having higher number of events in the 2016 report.

2014 HSCRC utilization files have been released at the time of the 2016 report – however, due to major revisions to the file structure, collection and coding of race from a single category to multiple category selections, 2014 data cannot be combined with previous years at the time of release for this report. Further research on appropriate methods and continuity for this data source will be explored to update results for using the ER and inpatient discharge data collected in 2014 and onward.

LIMITATIONS

State analyses rely on proprietary Neelson Claritas population files that are cost-prohibitive for local jurisdictions like Montgomery County to procure independently and data sharing agreements between DHMH and the vendor preclude sharing such data files with jurisdictions. In order to compile and produce rates on Montgomery County and its sub-geographies using zip codes, zip code tabulation areas (ZCTAs) were employed to approximate the populations needed to complete the computations of unadjusted age-specific (crude) rates and age adjusted rates. This difference in population file data source will impact comparability between the results in this report with otherwise comparable state/federal results.

FIGURE A. COMPARISON OF ZIP CODES AND ZIP CODE TABULATION AREAS, MONTGOMERY COUNTY 2010

Some events assigned to Montgomery County residents in the datasets for registered births, deaths, and discharges for ER visits included non-residential zip codes that are acceptable to submit for utilization-related billing, mailing, and other postal-related purposes but do not have comparable resident population estimates to apply to these non-residential zip code events to compute population-based rates, and therefore are excluded from this analysis.

CBSA RESULTS: CONTENTS OF REPORT

Each set of tables is compiled based on the data source. For each set of boundaries (County overall and each of the 6 hospital CBSAs) there are detailed data tables for HM Core Measures derived from VSA Deaths, HSCRC emergency room discharges, and VSA births files.

Within each measure there are several detailed tables to delineate results for the following population groups and subgroups:

ACKNOWLEDGEMENTS

We want to thank each of hospital representatives that worked with us to provide the 2013 primary, secondary and combined community benefit service area zip code definitions that we used to compile these reports. We look forward to working with you as we move forward to build on these analyses to improve the utility of this report as we move forward. Please provide us your feedback as you use this report and let us know what works well as well as areas for improvement.

Several staff at HHS contributed to the contents of this report:

- Colleen Ryan Smith, Senior Epidemiologist
- Keqing Chen, Planning Specialist (SAS Programmer)
- Yang Yu, Behavioral Health and Crisis Services

This work was completed under the direction of Dr. Ulder Tillman, Health Officer and Chief, Public Health Services and Uma Ahluwalia, Director, Health and Human Services.
