## Unintentional Drug- and Alcohol-Related Intoxication Deaths\* in Maryland

## Data update through 3<sup>rd</sup> quarter 2021\*\*

This report contains counts of unintentional drug- and alcohol-related intoxication deaths\* occurring in Maryland through the 3<sup>rd</sup> quarter of 2021, the most recent period for which preliminary data are available. Counts are also shown for the same period of 2008-2020 to allow for review of trends over time. Counts for 2021 are not complete and are subject to change.

Since an intoxication death may involve more than one substance, counts of deaths related to specific substances do not sum to the total number of deaths.

\*Deaths resulting from recent ingestion or exposure to alcohol or other types of drugs, including heroin, prescription opioids, prescribed and illicit forms of fentanyl (including carfentanil), cocaine, benzodiazepines, phencyclidine (PCP), methamphetamines and other prescribed and unprescribed drugs. Includes only deaths for which the manner of death was classified as accidental or undetermined.

\*\*For deaths finalized by the Office of the Chief Medical Examiner (OCME) as of March 10, 2022.
