January 22, 2020

Dear Resident,

This letter is to inform you about construction scheduled to begin on or around January 28, 2020 on the Lower Booze Creek stream restoration project, which extends 3,800 feet (0.7 miles) between River Road and Cabin John Parkway (see map on reverse for project location). This project is being done by the Montgomery County Department of Environmental Protection to repair the stream restoration work that was performed in 2015. The repair project is intended to reduce stream erosion, decrease high energy flows, improve stream habitat, and protect infrastructure. This effort is part of Montgomery County’s ongoing commitment to improve water quality in our local streams and in the Chesapeake Bay.

Construction access will be from Helmsdale Road and Cabin John Parkway (see map on reverse). Starting in January 2020, the initial construction work will entail staking out the Limits of Disturbance (LOD) and installing the construction access and LOD fencing around the project area. Work in the stream will begin in June 2020, in compliance with state restrictions on in-stream construction in the spring and early summer of each year. Completion of the project is expected to be October 2021.

For more information, visit the project webpage at: https://www.montgomerycountymd.gov/water/restoration/booze-creek.html

If you have questions or concerns about this project, please contact Doug Marshall at douglas.marshall@montgomerycountymd.gov or 240-777-7767.

Sincerely,

Doug Marshall
Project Planner,
Montgomery County Department of Environmental Protection,
Watershed Restoration Division
