April 16, 2020

TO: Sidney Katz, President
Montgomery County Council

FROM: Marc Elrich, County Executive

SUBJECT: Transmittal of and Recommendations on Proposed Amendments to the Ten-Year Comprehensive Water Supply and Sewerage Systems Plan

Pursuant to the requirements of the Environment Article, Sections 9-503 through 9-506 and 9-515 through 9-516, of the Annotated Code of Maryland, I am transmitting my recommendations for three proposed amendments to the County’s Comprehensive Water Supply and Sewerage Systems Plan. Recommendations and supporting documentation addressing these amendments are included in the attached staff report. All three amendments are requests for individual water/sewer service area category changes.

The recommendations for these amendments are consistent with the adopted policies and guidelines included in the Water and Sewer Plan and are consistent with precedents set under local area master plan service recommendations. Nevertheless, I expect that these three category change cases have the potential to generate public testimony and worksession discussions and are summarized as follows:

**Abutting Mains Case – 19-CLO-02A (Rubens Josefino)**

The applicant has proposed the provision of public sewer service for an existing single-family house, on a 2-acre property zoned RE-2, using a connection to an abutting sewer main manhole. The abutting main was constructed for the use of the adjacent Hampshire Ridge Baptist Church. The Council approved the church site for public sewer service under the private institutional facilities (PIF) policy in October 1996 (CR 13-692). Ideally, this sewer main should not have offered sewer service to a property otherwise ineligible for public sewer. Regardless, the sewer main construction occurred along a different alignment than was anticipated but not specified by the Council’s action.

Regardless of intent, the applicant’s property now qualifies for a single sewer hookup from the abutting sewer main. It is the only S-6-designated property that can make use of the abutting main for public sewer service. At 2 acres in size, the property cannot be subdivided under the existing RE-2 zoning. However, M-NCPPC Planning staff have advised that the onsite sewer hookup will need to cross an established category 1 conservation easement. I have
recommended that the Council defer action on the request for sewer category S-1 to allow the applicant to seek a modification to the existing conservation easement for construction of the needed sewer house hookup.

**Private Institutional Facility (PIF) Project – 19-CLO-03A (Buddy O’Keefe Family trust for Mar Thoma Church of Greater Washington)**

The designated PIF user, Mar Thoma Church, has proposed the use of public water and sewer service to locate a 350-seat sanctuary and parsonage on two parcels fronting New Hampshire Avenue in Cloverly just north of Norwood Road. The 11-acre site is zoned RE-2. The church will not require water or sewer main extensions; service can be provided from existing mains abutting the site along New Hampshire Avenue. The church is a qualified non-profit organization. These conditions satisfy two of the key requirements of the PIF policy. The third PIF policy requirement involves consideration of a concept plan for the project by the County’s Development Review Committee (DRC). Concept plan comments from the DRC member agencies are included in the accompanying packet.

A primary concern for the Council with PIF policy cases has been the amount of impervious area the project creates. This project straddles the Northwest Branch and Upper Paint Branch watersheds. The concept plan proposes an impervious area of 0.19 acres or 7.2 percent of the site area within the Upper Paint Branch Special Protection Area (SPA). This satisfies the SPA impervious area limitation of 8 percent. Impervious area in the Northwest Branch watershed totals 14.4 percent. The Cloverly Master Plan (1997) recommends an overall maximum 15 percent imperviousness for this subwatershed of Northwest Branch. Overall impervious area for the project totals 12.5 percent. The 2005 PIF Working Group report to the Council noted a county-wide average imperviousness in the RE-2 Zone of 9 percent.

Approval for water category W-1 is consistent with existing Water and Sewer Plan policies and Cloverly Master Plan recommendations. Provided that the Council finds the proposed concept plan acceptable, I have recommended a conditional action for sewer category S-1. Final approval of category S-1 will require the Planning Board’s approval of a preliminary plan that substantially conforms to the concept plan considered by and acceptable to the Council.

**Potomac Subregion Master Plan Case – 19-TRV-10A (Benjamin Gompf and Renee Shumer)**

The applicants have proposed the provision of public sewer service for an existing single-family house and the expansion of an existing day care center on a 2-acre property zoned RE-2. Public sewer service would be provided using a non-abutting sewer connection to a proposed gravity sewer main in the nearby planned Mount Prospect Farm subdivision. No existing sewer service policies allow for a recommendation to approve this request. The site is not within the planned public sewer envelope from the 2002 master plan. No existing or approved sewer main abuts or will abut the property. Neither does this property directly abut or confront the planned sewer envelope, allowing for the use of the Potomac Peripheral Sewer Service Policy from the 2002 master plan. A flagstem access to Travilah Road from the adjacent
Sidney Katz, County Council President
April 16, 2020
Page 3

lot intervenes between the applicant’s property and the planned sewer envelope at the Mount Prospect Farm subdivision site. I have recommended the request for denial.

Staff from the Department of Environmental Protection, Intergovernmental Affairs Division, will attend and participate in upcoming committee and full Council works sessions.

WATER/SEWER SERVICE AREA CATEGORIES INFORMATION

The Montgomery County Ten-Year Comprehensive Water Supply and Sewerage Systems Plan designates water and sewer service area categories for each property within the county. These service area categories determine a property's eligibility to receive public water and/or sewer service and indicate when the County and the sanitary utility (usually the Washington Suburban Sanitary Commission (WSSC)) should program water and sewerage facilities to serve those properties. (Although the actual provision of public service is often dependent on an applicant's own development schedule.) The Water and Sewer Plan is adopted and amended by the County Council; it is administered by the County Executive through the Department of Environmental Protection (DEP).

Water and Sewer Service Area Categories Table

<table>
<thead>
<tr>
<th>Service Area Categories</th>
<th>Category Definition and General Description</th>
<th>Service Comments</th>
</tr>
</thead>
</table>
| W-1 and S-1             | Areas served by community (public) systems which are either existing or under construction.  
                         | • This may include properties or areas for which community system mains are not immediately available or which have not yet connected to existing community service. | Properties designated as categories 1 and 3 are eligible for to receive public water and/or sewer service.  
                         |                                                                                                         | New development and properties needing the replacement of existing wells or septic systems are generally required to use public service. Properties with wells or septic systems on interim permits are required to connect to public service within one year of its availability.  
                         |                                                                                                         | Where water and/or sewer mains are financed under the front foot benefit system, WSSC will assess front foot benefit charges for mains abutting these properties unless the property has a functioning well and/or septic system. WSSC provides public water and sewer service throughout the county, except where service is provided by systems owned by the City of Rockville or the Town of Poolesville. |
| W-2 and S-2             | Categories W-2 and S-2 are not used in the Montgomery County Water and Sewer Plan.  
                         | (State's definition: Areas served by extensions of existing community and multi-use systems which are in the final planning stages.) | Where water and/or sewer mains are financed under the front foot benefit system, WSSC will assess front foot benefit charges for mains abutting these properties unless the property has a functioning well and/or septic system. WSSC provides public water and sewer service throughout the county, except where service is provided by systems owned by the City of Rockville or the Town of Poolesville. |
| W-3 and S-3             | Areas where improvements to or construction of new community systems will be given immediate priority and service will generally be provided within two years or as development and requests for community service are planned and scheduled. | Properties designated as categories 1 and 3 are eligible for to receive public water and/or sewer service.  
                         |                                                                                                         | New development and properties needing the replacement of existing wells or septic systems are generally required to connect to public service within one year of its availability.  
                         |                                                                                                         | Where water and/or sewer mains are financed under the front foot benefit system, WSSC will assess front foot benefit charges for mains abutting these properties unless the property has a functioning well and/or septic system. WSSC provides public water and sewer service throughout the county, except where service is provided by systems owned by the City of Rockville or the Town of Poolesville. |
| W-4 and S-4             | Areas where improvements to or construction of new community systems will be programmed for the three- through six-year period.  
                         | • This includes areas generally requiring the approval of CIP projects before service can be provided. | WSSC will not serve properties designated as categories 4 or 5, but will work to program water and/or sewer projects needed to serve these areas. Permits for new wells and/or septic systems for category 4 properties will be interim permits. (See above for further information.)  
                         |                                                                                                         | MODEP may require that development proceeding on interim wells and septic systems in category 4 areas also provide dry water and sewer mains and connections. Where water and/or sewer mains are financed under the front foot benefit system, WSSC will assess front foot benefit charges for abutting properties designated as category 4 unless the property has a functioning well and/or septic system. WSSC will not assess front foot charges for properties designated as category 5. |
| W-5 and S-5             | Areas where improvements to or construction of new community systems are planned for the seven- through ten-year period.  
                         | • This category is frequently used to identify areas where land use plans recommend future service staged beyond the scope of the six-year CIP planning period. | WSSC will neither provide service to nor assess front foot benefit charges for properties designated as category 6. Development in category 6 areas is expected to use private, on-site systems, such as wells and septic systems. |
| W-6 and S-6             | Areas where there is no planned community service either within the ten-year scope of this plan or beyond that time period. This includes all areas not designated as categories 1 through 5.  
                         | • Category 6 includes areas that are planned or staged for community service beyond the scope of the plan's ten-year planning period, and areas that are not ever expected for community service on the basis of adopted plans. | WSSC will neither provide service to nor assess front foot benefit charges for properties designated as category 6. Development in category 6 areas is expected to use private, on-site systems, such as wells and septic systems. |

Please note that the County does not necessarily assign water and sewer categories in tandem (i.e. W-3 and S-3, or W-5 and S-5), due to differences in water and sewer service policies or to actual water or sewer service availability. Therefore, it is important to know both the water and sewer service area categories for a property.

**Executive Staff Report**

The applicant seeks approval for a sewer category change from S-6 to S-1 to allow public sewer service for an existing single-family house. An existing WSSC sewer manhole abuts the northeast corner of the property from which WSSC could install a sewer service connection for the applicant's property. The property existed at the time the abutting sewer main and manhole were installed in 1999, a condition required for compliance with the Water and Sewer Plan's abutting mains policy.

The sewer main abutting this property was constructed for the adjacent institutional use, Hampshire View Baptist Church, approved for public sewer service under the Plan's private institutional facilities (PIF) policy under CR 13-692 in October 1996 (see page 28). New mains constructed for PIF-based cases are not intended to provide public service to properties not otherwise intended for public service, such as the subject parcel. The original sewer extension proposal for the church's property would have satisfied this requirement (See the map on page 8). However, the constructed sewer extension approved by WSSC was relocated to the southwest and as a result now abuts the subject property. Although not originally intended, the subject property does abut and predate the existing sewer main and should qualify for category S-1, restricted to only a single sewer hookup. At 2.0 acres in size, the property cannot be subdivided into more than one lot under the existing RE-2 Zone.

M-NCPCC staff have commented that the needed sewer hookup for the applicant's house will need to cross a conservation easement established on this parcel. (See the map on page 9.) Therefore, Executive staff recommend that the Council defer action on this request. This will allow the applicant time to work out the details for the onsite sewer hookup and any revisions needed for the conservation easement.

Typically, in abutting mains policy cases for properties outside the planned sewer envelope, the needed sewer hookup is not allowed to run within as easement on an adjacent property. In this case, however, the property could qualify for public sewer service without needing an offsite easement. The use of such an offsite easement on the adjacent Hampshire View Baptist Church property could be considered if that
easement provides an alignment for the sewer hookup that has less impact on the existing conservation easement.

Agency Review Comments

DPS – Well & Septic: DPS supports the category change. There is a permitted septic system for the existing dwelling, but percolation test records indicate that soil conditions would likely not support a septic reserve area for the property.

M-NCPPC – Planning Dept. The Sandy Spring/Ashton Master Plan shows this property to be outside the approved sewer and water service envelope. It appears that the nearest sewer infrastructure is on the adjacent Church property, an extension that was likely provided under the PIF policy and not for use by the surrounding neighborhood. An extension from this manhole would likely require forest removal within an existing Category 1 Conservation easement. The applicant has provided no justification for the necessity of sewer service to this property. More information is necessary to adequately assess this request.

M-NCPPC – Parks Planning: No parks impacts.

WSSC – Water: (not requested)

WSSC – Sewer: Basin: Northwest Branch. An 8-inch sewer line abuts the northeast corner of the property (contract no. 1997-2032A). A sewer extension is not required to serve the property. Average wastewater flow from the proposed development: 300 GPD.

Request [2]

WSCCCR 19-CLO-03A: Buddy O’Keefe Family Trust
Planned PIF User: Mar Thoma Church of Greater Washington

County Executive’s Recommendation: Maintain W-5 and S-6, with final approval for W-1 and S-1 conditioned on the Planning Board’s approval of a preliminary plan that substantially conforms to the concept plan (520190160) considered by the Development Review Committee on June 25, 2019. S-1 final approval will be restricted to a PIF use only. (Note that this conditional category change approval will expire five (5) years from the date of this action. Applicants may request a five (5)-year extension upon notification to DEP before the initial five-year expiration date. If this conditional action expires, DEP will grant administrative approval for W-1 and S-1, as a single sewer hookup by a utility service error, for the existing house on Parcel P053. This administrative approval will not also apply to Parcel P032, which will retain W-5 and S-6.)

Property Information and Location
Property Development
• 15400 New Hampshire Ave., Silver Spring
• Parcels P032 and P053, Snowdens Manor Enl (acct. nos. 00272883 and 00272872)
• Map tile: WSSC – 220NE01; MD –J5S1
• West side of New Hampshire Ave., at the intersection with Briggs Chaney Rd.
• RE-2 Zone; 10.93 acres (total)
• Cloverly Planning Area
  Cloverly Master Plan (1997)
• Northwest Branch Watershed (MDE Use IV) and Paint Branch Watershed (MDE Use III)
• Existing use: Single Family Home
• Proposed use: Place of Worship - Concept Plan No. 520190160 & Preliminary Plan No. 120200080; Mar Thoma Church of Greater Washington

Applicant’s Request:
Service Area Categories & Justification
Existing – Requested – Service Area Categories
W-5   W-1
S-6   S-1

Applicant’s Explanation
"Category change as necessary to provide water and sewer service to the proposed development of the property by the contract purchaser.
"Contract purchaser, Mar Thoma Church of Greater Washington, is a non-profit organization applying under the "PIF" policy.
"Property is surrounded by area of W-1 and S-1. According to WSSC records, 16" PCCP water and 8" PVC sewer exist within New Hampshire Avenue along the property frontage.
"Water and sewer service currently provided to the existing residence (15400 New Hampshire Avenue.)"

Executive Staff Report
The applicant seeks approval for categories W-1 and S-1 to allow for public water and sewer service for the proposed Mar Thoma Church of Greater Washington. Existing water and sewer mains abut the project site along New Hampshire Ave.; no new main extensions are needed. WSSC has noted that due to the type of material used for the water main abutting the properties, the applicant will need to replace segments of that main to allow for a new water service connection.

In granting approval for WSSCCR 03A-CLO-03 fort the adjacent Lutheran Church of St. Andrew project, the County Council stated the following in Resolution No. 15-397 (3/18/03) concerning the sewer service recommendations provided in the 1997 Cloverly Master Plan:

"The Council finds that the approval of this amendment is within the scope of the sewer service recommendation included in the 1997 Cloverly Master Plan (pg. 91), which states: 'Provide community sewerage service with the following limitations: Provide sewerage service throughout Cloverly except in the RC and RE-2 zones to maintain a low-density, rural character. The extension of sewer service to residential, institutional, and special exception uses in the RC and RE-2 area (except to relieve public health problems or to address other specific Comprehensive Water Supply and Sewerage Systems Plan policies) is not consistent with this Plan because of potential impacts on the low-density character of both areas...""

Staff recommend this request for conditional approval of categories W-1 and S-1. The provision of public water service for this project is consistent with the general water service policies in the Water and Sewer Plan. Public sewer service is evaluated under the Water and Sewer Plan’s private institutional facilities (PIF) policy (see
COMPREHENSIVE WATER SUPPLY AND SEWERAGE SYSTEMS PLAN AMENDMENTS
County Executive’s April 2020 Transmittal Packet
FY 2019 Category Change Requests

pages 28 - 31). Public sewer service will be restricted to a PIF use only consistent with the Plan’s PIF policy. The map shown on page 15 provides an inventory of PIF-based category change requests in the RE-2 Zone in the vicinity of the O’Keeffe/Mar Thoma Church request.

Information provided by WSSC indicates that the existing single-family house on Parcel P053 has existing WSSC water and sewer service, despite the current W-5 and S-6 categories. The proposed development of the site will include removal of the house. The existing service connections for the house will also be replaced for the new institutional use. In the event that the proposed PIF use project does not satisfy the conditions for final approval within the specified five- to ten-year conditional action timeframe, DEP will process a category map correction for only Parcel P053.

As now required by the Water and Sewer Plan’s PIF policy, a concept plan (520190160 “Mar Thoma Church of Greater Washington”) for the proposed project was considered by the County’s Development Review Committee (DRC) in July 2019. Agency review comments for that concept plan are provided in the table starting on page 12 - 14. The applicant has also submitted a preliminary plan for this project, no. 120200080, which is pending agency review.

Aside from compliance with PIF policy requirements, the Council’s concern with PIF-based requests has primarily been the additional impervious area created by these projects as compared to that expected to result from lower-density residential uses. The impervious surface exhibit provided on page 17 is part of the preliminary plan submittal. M-NCPPC staff comments on the concept plan’s proposed impervious area are provided in the table on page 14. The site is divided between the Upper Paint Branch and Northwest Branch watersheds. The Upper Paint Branch SPA calls for a maximum impervious area of 8 percent. Overall impervious area within the Bryants Nursery subwatershed Northwest Branch is recommended for between 10 and 15 percent. The following table summarizes the impervious area proposed by this project based on the recently submitted preliminary plan.

<table>

</tr>
</tbody>
</table>

Note that Executive staff has received comments from the Cloverly Civic Association opposing the approval of this request. DEP forwarded these comments to County Council staff for inclusion in the public hearing record.

Agency Review Comments

DPS – Well & Septic: Records indicate the existing septic system was installed in 1971 for a 3-bedroom dwelling with a design capacity of 450 gpd. Depending on if there are kitchen facilities and what type in the proposed facility, the design flow would be 1050 to 3500 gpd based on 350 seats. The property does not have an existing septic reserve area (SRA). The new use would require the establishment of an SRA that would be at least 20,000 square feet (0.46 acres) to over 70,000 square feet (1.6 acres) in area. No records of a site evaluation (water table and percolation tests) are on file in well and septic records for this address.

M-NCPPC – Planning Dept. This approximately 11-acre property is in the RE-2 Zone and is in the Cloverly Planning Area. This project proposes a house of worship under the Private Institutional Facilities policy. The 1997 Cloverly Master Plan includes this area as part of the Residential Wedge. The Plan’s objective for the Suburban Communities is to “retain land use and environmental policies that minimize impacts on the upper Northwest Branch and upper Paint Branch watersheds and underscore the large-lot character of this community as now-vacant properties develop.” (p 22)

The Plan recommends retention of the existing RE-2 zoning throughout the Residential Wedge, including this property. In addition, the Plan provides recommendations designed to maintain environmental resources in the two watersheds. This property straddles the boundary between the Paint Branch and Northwest Branch watersheds. The portion in the upper Paint Branch watershed (about 2.7 acres) is also in a Special Protection Area and an environmental overlay zone with an eight percent imperviousness limit. The Plan proposes a goal of 10 percent to 15 percent imperviousness for the remainder of the property in the Northwest Branch watershed.

The applicant has previously submitted a Concept Plan for agency review. Agency comments have been submitted and are included with this review. Under the current PIF policy, Council review of proposed category
changes will focus on consistency between the concept plan and the applicant’s proposed development plan, and on proposed amounts of imperviousness.

Religious Assembly is a permitted use in the RE-2 Zone, which implies that the use is in keeping with the intent of the zone and therefore with Plan objectives for preserving the large lot character of the community. This property should meet imperviousness goals for the upper Northwest Branch watershed and adhere to the eight percent standard required by the Upper Paint Branch Environmental Overlay Zone. The applicant should include estimates of imperviousness in both watersheds as part of its category change application, which will help the Planning Board and County Council analyze the application in the context of Water and Sewer Plan policies for private institutional uses.

M-NCPPC – Parks Planning: No parks impact.

WSSC – Water: Water pressure zone: 660A. WSSC conducted an SPF (DA6802Z19) and an associated letter of finding is dated 6/18/2019 [see sketch plan on page 18]. A 16-inch (pre-stressed concrete cylindrical pipe) PCCP water line in New Hampshire avenue abuts the property (1957-0266). PCCP mains may not be tapped. A WSSC special detail involving shutting down the main and replacing two pipe segments will be required to establish connection. [emphasis added] Local service is adequate.

WSSC – Sewer: Basin: 10-088, Blue Plains WWTP Service Area. An 8-inch sewer line in New Hampshire avenue abuts the property (1982-5510A). Average wastewater flow from the proposed development: 1400 GPD. Program-sized sewer mains are not required to serve the property. Interceptor capacity is adequate. Treatment capacity is adequate.

Development Review Committee: The following table provides agency review comments for this project’s concept plan. Not all agencies review and provide concept plan comments, such as WSSC.

Executive Staff Report

The applicants seek approval for a sewer category change from S-6 to S-1 to allow for public sewer service for an existing single-family house and the expansion of an existing childcare use. The 2.0-acre lot is zoned RE-2 and is outside the planned public sewer envelope in this area. DPS Well & Septic indicates that no further increase in the number of children in the child care operation can be allowed under the existing septic system design. WSSC advises that the provision of public sewer service will require the construction of a low-pressure, offsite sewer hookup that would need to cross other properties to reach an approved gravity sewer along Hanson Farm Dr. M-NCPPC concurs that the property was excluded from the recommended public sewer envelope provided in the 2002 Potomac Subregion Master Plan.

The nearby Mount Prospect Farm subdivision is approved and planned for public sewer service. However, the sewer mains planned for that project will not directly abut applicants’ lot. Gaining access to a sewer main in the proposed subdivision would require easements across the flagstem of the adjacent lot and several properties within the proposed Mount Prospect Farm subdivision. (See the map on page 24.) The need for easements across intervening properties is not consistent with the Water and Sewer Plan’s abutting mains policy.

The subject lot is also near the planned sewer service envelope that includes the Mount Prospect Farm site. However, the lot is not directly adjacent to the planned service envelope; the flagstem for the lot at 13542 Travilah Rd. intervenes. Given this, the lot does not qualify for consideration of public sewer service approval under the Potomac Peripheral Sewer Service Policy. (See the policy at pages 31-33.)

Staff recommends denial of this request for sewer category S-1; no existing service policies support its approval.

Agency Review Comments

DPS – Well & Septic: The existing septic system is designed to handle a maximum daily flow of 750 GPD, however, in 2008 this office allowed the daycare operation to expand to 810 GPD (4 residents and 34 children) without upgrades to the septic system. No further increase in the number of staff or children that would exceed a flow of 810 GPD is permissible. The existing septic reserve area for the property cannot accommodate an increase in flow.

M-NCPPC – Planning Dept.: This two-acre property is in the RE-2 Zone and is located in the Travilah Planning Area, part of the Potomac Subregion. The 2002 Potomac Subregion Master Plan excluded this
property, and the others around the intersection of Travilah and Dufief Mill roads, from the plan’s sewer envelope. It should also be noted that immediately adjacent lots in the Mount Prospect Farm community were explicitly configured for compatibility with larger lots in the subject property’s neighborhood and across Travilah Road. In addition, any sewer connection would have to cross homeowners association land to reach Hanson Farm Drive.

**M-NCPPC – Parks Planning:** No parks impacts.

**WSSC – Water**

**WSSC – Sewer:** Basin: Muddy Branch.

There are no existing sewer line abutting the property. The nearest sewer line is in Hanson Farm Drive, in the Mount Prospect/Hanson Property development, which have been approved for construction on August 27, 2019 under Contract No. DA6302D17. A private 660’ foot-long sewer line is required to serve the property. Of the 660’, approximately 580’ will be low pressure sewer. This low pressure sewer line would be a dedicated line for this site and may not tie into the low pressure sewer designed under DA6302D17. This sewer line would cross over a minimum of 2 properties. Private easements would be required. Construction of this sewer may involve the removal of trees. [See private extension concept on page 24.]

Average wastewater flow from the proposed development: 300 GPD minimum. Program-sized sewer mains are not required to serve the property. Interceptor capacity is adequate. Treatment capacity is adequate.

*[DEP note: WSSC has advised that a sewer service connection to a low-pressure/gravity sewer transition manhole, such as on proposed Hanson Farm Dr., will not work. The map on page 24 shows a connection to the proposed gravity main downstream of the transition manhole.]*

Packet Appendix: Related 2018 Water and Sewer Plan Service Policies

Chapter 1, Section II.G.3: Community Service for Properties Abutting Community System Mains

<table>
<thead>
<tr>
<th>County Council Actions:</th>
<th>Adopted October 2, 2018 (CR 15-396)</th>
</tr>
</thead>
</table>

II. POLICIES FOR THE PROVISION OF WATER AND SEWERAGE SERVICE

II.G. Special Policies for Water and Sewer Service
The Plan's general service policies address water and/or sewer service issues for the majority of development recommendations found in local area master plans. However, a master plan’s general recommendations and this Plan’s general service policies cannot anticipate every possible service situation. Many of the following special service policies were developed from specific cases where the County Council, in addressing an exceptional situation, found sufficient cause to establish its action as a precedent for other similar situations that follow. The Council adopted these policies in order to provide consistent policy guidance, rather than relying on case-by-case interpretations.

II.G.3.: Community Service for Properties Abutting Community System Mains
Under specific and limited circumstances, community water and or sewer service may be provided to properties that abut an existing or approved water and/or sewer main. Except in cases where this policy specifically requires the County Council’s consideration and action, DEP may grant approval for abutting service hookups through the administrative delegation process, under the "Community Service for Properties Abutting Community System Mains" policy, Section V.D.2.a.

II.G.3.a.: General Requirements
The provision of community service under this policy requires that the property, or a structure on the property, must have been established prior to the extension of the abutting water or sewer main. Residential, institutional, and commercial uses qualify as existing structures; barns, garages, or other types of outbuildings do not qualify. Satisfactory of this requirement qualifies the property for a single public service hookup. Neither the construction of a building on an unimproved property, nor the addition to or replacement of an existing structure, invalidates the application of this policy. The provision of community service under this policy shall not be used as justification for the connection of intervening or nearby lots or parcels if they would not otherwise be entitled to connect to community systems.

Technical Feasibility of Service Connections
The provision of community service under this policy also requires that service from the abutting main must be technically feasible. Major water and sewer transmission mains and sewer force mains cannot support individual service connections and hookups, and therefore do not qualify abutting properties for community service under this policy. Service from low-pressure, small-diameter sewer mains may also be restricted, depending on the type or number of users proposed. WSSC’s current pump/pressure system policies do not permit both residential and non-residential (commercial/institutional) uses to connect to the same low-pressure main, requiring instead separate, dedicated mains for each separate non-residential use.

Planned Community Service Mains
The implementation of this policy applies to both existing and planned service mains. Where a category change approval is based on new mains planned and approved by WSSC, actual service depends on the construction of that main by the applicant for that main. The owner of a property with a restricted abutting mains approval based on construction of a new main cannot independently initiate the construction of all or part of that new main.

Non-Abutting Service Connections
A non-abutting water or sewer connection may allow for the provision of community service under this policy. A non-abutting connection is typically located within either a public right-of-way or a WSSC main easement. The associated service hookup must be located on only the customer’s property receiving community service. The use of an offsite service hookup in an easement crossing another intervening property is not allowed. Non-abutting service connections require specific approval from WSSC.

Policies for the use of non-abutting service connections differ between this Plan’s policies and WSSC’s. In this Plan, the preceding policy concerning non-abutting service connections will determine whether a property qualifies for community service under this abutting mains policy. Most often, such a property is located outside the planned community service envelope and is considered for community service only because it satisfies this
Chapter 1, Section II.G.3: Community Service for Properties Abutting Community System Mains

special service policy. WSSC’s policy for non-abutting service connections addresses cases involving access to a community system main where the County has already approved the property for community service. Typically, the property is within the planned community service envelope. In summary:

- The Water and Sewer Plan’s policy concerning non-abutting service connections affects decisions about which properties may receive community service.

- WSSC’s non-abutting connection policy affect decisions about the best way to serve a property once the Plan has established that property for community service.

Abutting Mains Policy Exclusions

This policy will not apply in the following circumstances:

- **Private Institutional Facilities** - The application of this policy does not include the provision of community service for private institutional facilities (PIFs) located outside planned community service envelopes. These cases must be addressed separately through the PIF policy (see Section II.G.4.).

- **Limited Access Service Mains** - This policy cannot be applied in cases where the County Council has expressly restricted access to the abutting main as specified under the Limited Access Water and Sewer Mains policy (see Section III.A.1.).

II.G.3.b.: Single Hookups for Only One Property

A single water and/or sewer hookup only is allowed for an individual property or for a structure that satisfies the policy requirements under Section 3.a. preceding. The application of the policy is most often for a single property in the same geographic configuration that existed at the time an abutting main was approved or constructed. However, the policy does allow for exceptions, as follows:

Allowed Property Changes

A change in the property configuration due to the following circumstances does not invalidate this allowed single hookup:

- Dedication of land for a public use such as a road right-of-way or park land.

- An exchange of land between a qualifying property and an adjacent property, qualifying or not, provided the overall number of qualifying lots—and therefore the allowed number of hookups—remains the same. Under this provision, at least one property must have qualified for a single hookup under this policy before the lot line adjustment occurred. A lot line adjustment to acquire frontage along a main does not justify an abutting mains approval.

- The inclusion of additional contiguous, commonly-owned properties, if those properties are combined through subdivision with the qualifying property into a single property. Only one single water and/or sewer hookup for the entirety of the combined properties will be approved in such cases, so that the provision of community service does not promote the further subdivision of additional lots. Final approval of a category change will require the Planning Board’s approval of the subdivision plan or plat assembling the properties.

Remainders of Qualifying Properties

The allowed single hookup may also be assigned to an existing property that is the remainder of a property that would have originally qualified for a single hookup under Section II.G.3.a. above. For approval of single service hookups, these properties must satisfy both of the following conditions:

- The residual property proposed for community service abuts the existing or approved main; and

- The allowed service hookup has not been used elsewhere on the property that originally qualified for the single service hookup. Community service provided elsewhere on the original property where consistent with both Water and Sewer Plan general service policies and with master plan recommendations shall not be considered to have used this one allowed hookup.
Chapter 1, Section II.G.3: Community Service for Properties Abutting Community System Mains

DEP may grant approval for this single hookup under the administrative delegation process included in this chapter, as noted previously in Section II.G.3., provided that either:

- All of the residual properties involved are still under common ownership, or
- None of the other residual properties from the original abutting property could qualify under this policy for the allowed hookup because they do not abut the subject water or sewer main.

However, DEP shall refer to the County Council any cases where two or more residual properties that could qualify for the single service hookup are under different ownership. DEP will attempt to notify the owners of those qualifying properties of the pending category change request amendment and of the Council’s hearing for that amendment.

Single Community Service Hookups in Proposed Subdivisions

Some properties that qualify for a single community service hookup under this policy will also be proposed for new subdivisions. In these cases, this policy may allow for a new lot using community service in addition to those lots approved using individual, onsite systems. Qualifying projects will need to satisfy the following conditions:

- The original property had to satisfy the general policy requirements for a single community service hookup under Section II.G.3.a., preceding.
- The property in the subdivision receiving the single community service hookup must receive service by either a direct connection or non-abutting connection to the water or sewer main. The conditions for the use of a non-abutting connection apply as explained in Section II.G.3.a., preceding.
- Final approval of a category change under this condition will require the Planning Board’s approval of a preliminary plan that specifies the lot receiving the allowed community water and/or sewer hookup.

Properties located within the Piney Branch Restricted Sewer Access Area and the Glen Hills Study Area do not qualify for this provision of the abutting mains policy with regard to sewer hookups. The policy is not intended to promote the creation of additional subdivision lots in these areas. A single sewer hookup may be provided in a subdivision to one qualifying lot that could be served by an individual septic system.

II.G.3.c.: Multiple Sewer Hookups

In order to protect and preserve sensitive environmental features on the site (e.g. stands of trees/forest, wetlands, etc.) that would be potentially harmed by the installation of septic systems, while also limiting the effects of sewer-supported development, community sewer service may be provided to a property abutting an existing sewer main provided all the following conditions are satisfied:

- The site would qualify for a single sewer hookup under section 3.a. above;
- The site contains sensitive environmental features that DEP, in consultation with M-NCPPC, determines would be preserved to a greater extent by the provision of community sewer service rather than the construction of septic systems;
- The number of sewer hookups allowed shall not exceed the number of lots which could have been approved for septic systems, based on a review of the site conditions (soils, groundwater conditions, local history, etc.) by DEP in consultation with DPS and M-NCPPC, and assuming that at least one sewer hookup is allowed;
- That all the proposed sewer hookups can be provided from the abutting mains: no on-site main extensions are required, no off-site main extensions or hookups (special connections) are required, and no rights-of-way from other properties are required.

This policy cannot be applied in cases where the County Council has expressly restricted access to the abutting main as specified under the Limited Access Water and Sewer Mains policy (see Section III.A.2.). The provision
Chapter 1, Section II.G.3: Community Service for Properties Abutting Community System Mains

of community service under this policy shall not be used as justification for the connection of intervening or nearby lots or parcels if they would not otherwise be entitled to connect to community systems.

II.G.3.d.: DEP Advance Approval of Single Abutting Hookups in Categories 4, 5, and 6

DEP may direct WSSC to provide an allowed single water and/or sewer hookup for a residential use on a property not currently designated for community service (categories 4, 5, or 6) upon confirmation of the following:

- DEP staff confirmation that the property qualifies for service under this policy, and does not require consideration and action by the County Council for approval; and
- DEP receipt of a valid category change request application for the property.

Only in such cases may DEP approve service for a residential use from an abutting main in advance of granting the actual service area category approval. Commercial and institutional uses must first receive the required service area change.

Chapter 1, Section II.G.4: Community Service for Private Institutional Facilities Policy

County Council Actions: Adopted October 2, 2018 (CR 15-396)

II. POLICIES FOR THE PROVISION OF WATER AND SEWERAGE SERVICE

II.G. Special Policies for Water and Sewer Service

The Plan's general service policies address water and/or sewer service issues for the majority of development recommendations found in local area master plans. However, a master plan's general recommendations and this Plan's general service policies cannot anticipate every possible service situation. Many of the following special service policies were developed from specific cases where the County Council, in addressing an exceptional situation, found sufficient cause to establish its action as a precedent for other similar situations that follow. The Council adopted these policies in order to provide consistent policy guidance, rather than relying on case-by-case interpretations.

II.G.4: Community Service for Private Institutional Facilities

This Plan defines private institutional facilities (PIFs) as buildings constructed for an organization that qualifies for a federal tax exemption under the provisions of Section 501 of Title 26 of the United States Code (Internal Revenue Service).

Private institutions, needing space to locate and grow, sometimes look to less-expensive land zoned for lower-density development. This land is often located outside of the community water and/or sewer service envelopes. The County Council adopted a special service policy addressing PIF uses with three primary goals in mind:

- To continue to support, where the provision of community service is reasonable, the county's private institutional facilities, which the Council recognizes as having an important role in their communities and for their residents;
- To provide more objective and consistent criteria in evaluating PIF cases; and
- To limit the potential impact of water and sewer main extensions constructed outside the community service envelopes for the sole purpose of supporting PIF uses.

II.G.4.a: PIF Sites Within the Planned Community Service Envelopes

For private institutional facilities located within the planned water and/or sewer community service envelopes, service area category changes may be approved by DEP through the administrative delegation process (Section V.D.2.a.: Consistent with Existing Plans). For a specific site, the planned water and sewer service envelopes may differ due to the general service policies (Section II.F.) included in this Plan.

II.G.4.b.: PIF Sites Outside the Planned Community Service Envelopes

The County Council will address category change requests seeking the provision of community water and/or sewer service to such facilities located outside of the planned community service envelopes on a case-by-case basis by the policies provided in the following sections. Under this circumstance, category change requests for PIF uses have specific application requirements. Refer to Section II.G.4.e. for relevant information.
Chapter 1, Section II.G.4: Community Service for Private Institutional Facilities Policy

These application requirements include the submission of a conceptual development plan for the proposed PIF use. The County Council has come to place greater emphasis on the review of a concept plan for projects seeking the approval of community water and/or sewer service under the PIF policy. PIF-based category change cases often propose more intense development of a site than would be expected on a property zoned for lower-density development. As a result, one of the Council's more significant concerns is the amount of impervious area proposed by the concept plan. Typically, the Council's approval of a category change for a PIF use is based on an understanding that the PIF user's final development plan will be consistent with the concept plan considered by and acceptable to the Council, especially with regard to impervious area.

The use of community service outside the planned community service envelopes can imply inconsistency with the general recommendations of local area master plans. However, many master plans are silent on the specific issue of community service related to exceptional service policies in this Plan, such as the PIF policy. The County Council typically interprets these situations as suitable for the application of this policy.

Some circumstances will result in properties that are specifically excluded from the application of this policy; see Section II.G.4.c., below.

In cases where the County Council supports a requested category change for a PIF use, the Council will typically choose to condition a category change approval on either:

- The Planning Board's approval of a preliminary subdivision plan that the Board finds to be in conformance with local area master plan recommendations, or
- The Planning Board's approval of a preliminary subdivision plan which conforms substantially with the concept plan reviewed by the County Council.

Please refer to Section V.E.2. for additional information concerning conditionally approved Water and Sewer Plan amendments, including the five- to -ten-year sunset provisions for final approval actions.

Sites Abutting Existing Water and/or Sewer Mains

For cases where existing or approved water or sewer mains abut or will abut a property, the Council may consider the approval of service area category amendments for sites with an existing PIF use and for sites proposed for a new or relocating PIF use, excluding those zoned AR (see Section II.G.4.c).

Sites Requiring New Water and/or Sewer Main Extensions

For sites where the provision of community service for a PIF use requires the construction of new water and/or sewer mains, the Council shall apply the following criteria:

- For existing PIF uses, service area category amendments may be approved for sites only where required water and/or sewer main extensions do not threaten to open undeveloped land to development contrary to the intent of the relevant local area master plan.
- For new or relocating PIF uses, service area category amendments may be approved for sites where required new water and/or sewer main extensions will not make community service available to additional properties that are otherwise not eligible for community service under the general policies of this plan.

WSSC policies require that where low-pressure systems provide sewer service to a non-residential use, that system must be dedicated to only one user and cannot provide service to intervening properties. This policy will therefore allow a dedicated, low-pressure sewer main extension for a PIF use to abut properties ineligible for community sewer service.

Care must be taken to ensure that any associated gravity outfall from a low-pressure sewer system otherwise satisfies these requirements.

New WSSC wastewater pumping facilities are not allowed where their only purpose is to serve PIF uses. (See Section II.G.4.c., following.)

Consistent with the Limited Access Water and Sewer Mains policy (see Section III.A.1), water and sewer main extensions outside the acknowledged community service envelopes, where required, shall be designated "Limited Access." Where community sewer service for a PIF use will be provided by low-pressure mains, those mains shall be dedicated only to that PIF use and generally not eligible for additional service connections. This is consistent with WSSC's policy of requiring that non-residential pump/pressure sewer system users have systems dedicated to only that use. The County and WSSC may make limited exceptions to this requirement to allow for the relief of failed septic systems, where such service is technically feasible.
### Chapter 1, Section II.G.4: Community Service for Private Institutional Facilities Policy

PIF uses may receive service from limited access water or sewer mains where the Council has specifically approved access to those mains. The provision of community service under this policy shall not be used as justification for the connection of intervening or nearby lots or parcels if they would not otherwise be entitled to connect to community systems.

Under its Systems Extension Permit (SEP) process, WSSC requires that all commercial and institutional service applicants construct and pay for the community systems main extensions and related facilities needed to serve their projects.

#### II.G.4.c: PIF Policy Exclusions

The following circumstances restrict the application of the PIF policy in cases where community service is sought.

**PIF Uses Affected by Specific Master Plan Service Policy Recommendations**

This policy cannot be used to justify the provision of community service where a local area master plan specifically recommends against the use of community service for PIF uses, or for any use in general.

**PIF Uses on Sites Zoned Agricultural Reserve (AR)**

To help preserve the integrity of the land-use plan for the County’s agricultural reserve, neither community water nor sewer service shall be used to support existing or proposed PIF uses within the Agricultural Reserve (AR) Zone. This prohibition shall apply to all PIF cases regardless of whether public service requires either new main extensions or only service connections to an existing, abutting main.

The only exception allowed to this prohibition is to allow for community service to relieve health problems caused by the failure of on-site systems, as documented by the Department of Permitting Services (DPS). In the case of a public health problem, DEP and DPS staff will need to concur that the provision of community service is a more reasonable alternative to a replacement of the failed on-site system, either by standard conventional or alternative technologies. WSSC and DEP staff will need to concur that the provision of community service is technically feasible.

Note that this Plan, with the preceding agricultural preservation goals in mind, also places limitations on the size of individual, on-site septic systems used within the AR Zone (see Section II.G.4.c).

**PIF Uses in Existing Residential Structures**

The Council may deny service area category amendments for PIF uses located outside the acknowledged water and/or sewer envelopes where main extensions are required for private institutional facilities seeking community service for existing residential structures. This could result in the extension of community water and/or sewer service for structures which would not otherwise be eligible for such service, and which could return to residential use.

**PIF Uses Requiring New WSSC Pumping Facilities**

In cases where more than one PIF use proposes to locate on a site requiring a pump and low-pressure main extension, WSSC requires that each institutional facility have a separate pump and pressure main system. The County and WSSC will not support the provision of community sewer service for a PIF use where that service will require a WSSC-owned and operated wastewater pumping station that does not also support community sewer service for other non-PIF uses consistent with the service policies of this Plan.

#### II.G.4.d: Further PIF Policy Considerations

The PIF policy has accomplished its intended goals in many cases, although the practical application of the policy in other cases remains controversial. These more controversial cases have raised additional policy questions about the criteria for to evaluate PIF category change requests. Among these are the following:

- Limitations on the length of water and/or sewer main extensions needed to serve PIF uses.
- Additional prohibitions on community service for PIFs in other zones besides the AR Zone.
- Limitations on the amount of allowed impervious surfaces for PIF sites, whether universal or based on zoning criteria, and subsequent enforcement of approved PIF impervious surface limitations.
- Concerns about the effect of PIF uses on nearby communities with regard to compatibility, noise, traffic, etc.

#### II.G.4.e: PIF Policy Application Requirements

Applicants seeking category change approvals under the PIF policy need to provide the following information in addition to the category change application form:
Chapter 1, Section II.G.4: Community Service for Private Institutional Facilities Policy

- Name of and contact information for the proposed institutional use, if that institution is not already the owner of the property.
- Statement of the institution’s non-profit, federal tax-exempt status from the U.S. Internal Revenue Service.
- A concept plan for the site of the proposed institutional use that has been considered by the M-NCPPC Development Review Committee (DRC) under that agency’s concept plan review process. The concept plan needs to include:
  - Proposed activities, seating capacity, and auxiliary uses (day care, private school, etc.).
  - Proposed building footprints, parking and driveway areas, and other paved surfaces in sufficient detail to estimate impervious surface area.
  - Concepts for water and/or sewer main extensions, as needed.

The category change application needs to include a copy of the concept plan and a copy of the comments for the plan provided by the DRC agencies.

II.G.4.f.: County Council Reconsideration of PIF Concept Plan Changes

The discussion of the review of PIF policy cases (Section II.G.4.b) explains the Council’s consideration of a concept development plan for the proposed PIF use, which in part is the basis for a category change approval action. However, if the PIF user makes significant changes (prior to service being provided to the approved PIF use) to the development plan from the plan considered at the time of the Council’s action, the County will require reconsideration of the original approval action by the County Council. The M-NCPPC Planning Department will evaluate the revised concept plan with respect to the original plan and report its findings to DEP and the Council concerning significant changes that would warrant the Council’s reconsideration.

Appendix C, Section II.M: Potomac Area RE-1 and RE-2-Zoned Properties

County Council Actions: Adopted October 2, 2018 (CR 15-396)

II. SPECIFIC SERVICE AREAS

The following sections identify and explain the areas in the county where exceptional water and/or sewer service policies apply.

II.M.: POTOMAC AREA RE-1 AND RE-2-ZONED PROPERTIES

Special Community Sewer Service Policy: Recommended by the 2002 Potomac Subregion Master Plan

Subject Area: Properties zoned RE-1 or RE-2-at the edge or “periphery” of the master plan’s recommended community sewer service envelope

Service Recommendation & Comments: The master plan’s recommendations concerning for community sewer service properties zoned for rural estate development (RE-1 and RE-2) depart from those in the 1980 master plan. The previous master plan had allowed for the consideration of sewer service for rural estate zones. The 2002 master plan follows in line with the Water and Sewer Plan’s general service policies for rural estate zones. However, the new master plan also recognizes that before 2002, the approval and provision of community sewer service within these zones occurred on a case-by-case basis, resulting in an irregular sewer service envelope. The master plan recommends that RE-1- and RE-2-zoned properties located at the edge or periphery of the recommended community sewer envelope may be considered for community sewer service on a case-by-case basis. In such cases:

- The property under consideration must abut or confront another property within the master plan’s designated sewer service envelope.
- The extension of community sewer service is intended to follow existing public rights-of-way and must not affect streams, stream valley buffers, or other environmentally-sensitive areas.

In addition to the preceding essential requirements, several years of experience implementing this policy have resulted in the acceptance of guidelines that further refine the evaluation of and recommendations for potential cases.

- Properties that confront the sewer envelope across broad public rights-of-way should also be in relatively close proximity to other properties approved for sewer service on their own side of that right-of-way.
Appendix C, Section II.M: Potomac Area RE-1 and RE-2-Zoned Properties

- The selection of sewer main extensions, wherever possible, should minimize the number of properties abutting new sewer main extensions.

**Figure C-F12: Potomac Area Community Sewer Envelope and RE-1 and RE-1 Zones**

Note that the 2002 master plan specifically recommends excluding properties within or at the edge of the following neighborhoods from the use of this policy (see Figure C-F13):

- The Piney Branch subwatershed
- The Palatine of Potomac neighborhood
- The Greenbriar Estates neighborhoods.

The preceding exclusion areas previously included the Glen Hills neighborhoods. The 2002 master plan recommended reconsideration of this exclusion following the completion of the Glen Hills Area Sanitary Study. However, the recommendations provided with the study did not address this policy. The 2017 Water and Sewer Plan update removes the Glen Hills area exclusion, except for those properties at the periphery of the planned sewer envelope within the Piney Brach watershed.
